And suprisingly at the time you had "disappeared"....
Any more lies you would like us to believe Idiot of MAckey?
By the way, the recent post in which you attempted to give scanner
advice was lame....."go buy a used scanner"....your expertise amazes
me...!!
Have you ever met Al Clark?.....(daclark@lni.net)?
I think you two would really enjoy eachothers company....

Source record: 173682

Reading your question, it is not clear whether you are talking about mobil or base operations. If you are looking for a good mobil antenna for your car that also performs well on 2-meters, purchase a good dual-band 2-meter/440 antenna. These antennas have a broad enough receive range to work well with most scanners, while allowing quality QSO's on 2-meters.

Be advised, though, that you may only use one antenna with a transciever OR a scanner. You cannot use the one antenna for both at the same time. Otherwise, the first transmission made (probably 30-40 watts) will blow out the scanner's front end.

Hope this helps.

The amount of misinformation and misunderstanding of cable loss and impedence on this subject's previous messages is incredible. It would be beneficial to many of you to get a copy of the ARRL Handbook for Radio Amateurs and perhaps a Belden catalog and study up on the subject.

From: avcbob@aol.com
Message-ID: <19980115044801.XAA29529@ladder02.news.aol.com>
Source record: 173685

I would doubt that you will see the LAPD going to digital anytime in the near future. Although the ASTRO's can go digital, the older base stations can't. They still run MODAT as the system can't handle MDC 1200....digital is a way off.

Also, the existing MDT system is not a Motorola system. I don't know about any Motorola MDT's that are "plauging" the LAPD. The current system, although VERY dated is working well.

Some of the recent improvements: 1.5 Sec delay for power switch
(requires 1.5 seconds of key press to turn the radio off) and recessed
power button. These two features (in radios shipping now) have
greatly reduced the chance of accidentally turning off the radio.
Good Day All,
Rich.

Haven't you been reading the news media? CHP has made it very public that they will soon be using radar on the entire I-5 corridor from Oregon to Mexico, and on I-15 San Bernardino freeway.

Thanks for the site info Bill; And if I my ask you a question, regarding tapping into the baseband audio output discriminator. Following your recomendations, I went to my local RS to get a 2.2-uF tantalum capacitor to connect to pin 9 of IC2. However they didn't have any rated at 2.2uF, only 1.0mfd. Can I connect two together for the desired result; or what other options are there ?
Thanks in advance.
A true fan of your works.

That could be true. I've got one 50 Ohm cable that measures infinity
and
another zero! 8-)

> I've found good-quality cable in both
> impedances, and garbage cable also in both impedances. Simply marking a
> cable as 50 ohms doesn't assure its quality, and having a nominal impedance

I was speaking in gross generalities, Roy. Through my CB years and into
ham
then into the profession, I've yet to see new 50 Ohm cable that wasn't
useable
with VHF and UHF transmitters.

I've seen plenty of shitty 75 Ohm stuff pumped out of Asian sweat-shops
that I
wouldn't use due to it being inadequate for the intended purpose.

Can anybody help with frequencies or maybe a referral to an appropriate website for frequencies for a local area?

I don't mean to eat bandwidth, but all I've been able to locate in my area are the basic PD dispatch channels...

I'm sure there's a Gene Hughes-like site or 5 out there, but I haven't seen one mentioned in a while... I'm looking for freaks for the Long Beach, California area in particular.

I've got PD channels 1-6, but there are others I've heard reference to, like "12"!?, and a good table of Public Service and local government channels referenced by channel number and/or use type would be awesome. Any locals out there?

Of particular interest to a friend of mine would be those frequencies used by the fire department and ambulance companies to communicate with area hospitals to determine courses of treatment for patients on the way to the hospital. I think it used to be part of an 8-channel ambulance system of some kind, but I can't seem to locate it these days. Have they all gone cellular, or trunked, or something? I know LA's trauma net went thru a major financial restructuring recently...

Also, a recent beat map for LBPD would be a godsend. It's changed a bunch since I moved away.

Thanks,
Bob

Rick,

You're going to get a lot of smartass answers, and it's 'cause it's a pretty stupid question.

Sorry, but that's the way it is. First, there is no "best" scanner for everyone. Second, the "better" quality scanners aren't the cheapest, and third, there are no new scanners currently available to the general public that tune the cellular telephone frequencies. By the way, even if there were, it's a violation of federal law to listen to cellular or cordless telephone conversations. Yes, I know those people listened to Newt. Ever since that happened lots of folks want to get in on the action. But did you know that they paid a five of $500 each? Sure would run the price of that scanner up, wouldn't it?

There's a lot of neat stuff to listen to with a scanner that is perfectly legal.

I'm not familiar with the "Of Course" programmable handheld scanner, so I can't tell you anything about it.

However, AOR, Icom, Radio Shack and Alinco all sell handhelds that can be programmed via PC. The AOR8000 is probably the most popular of the bunch. US selling price is around $600. On the other end of the scale is the Radio Shack PRO64 which sells for about $200.

The easy solution for that is to enable the lock mode in
programming for all but ptt function,then hold the light key
for 3 seconds and it will lock all the keys in the radio. I
had some complaints of this problem when they were new, but
after doing this,people absolutely love them.

An easy way to convert is to divide 300 by whatever meter band ie.
300/2 meter band = 150MHz. Its a close approximation that will get you
in the ball park. The 2 meter amateur radio band is actually
144-148MHZ. I've included a .gif file of the US Amateur Radio Bands
for a quick reference and you can find out more at http://www.arrl.org

I hope this helps.

Dan T.

>
>Jens
I forgot the second have of your question. For MHZ to Meters you would use the formula in reverse. Take the center of the 2 Meter amateur band, 146MHz and divide it into 300 ie. 300/146 MHz = 2.054794520548 meters. it gets rounded off to 2 Meters. If your curious about where the 300 comes from, it's from using the speed of light(in Meters) as a reference.

I hope I remembered everything this time.

Realize that the scanner is the terminating load for the line in a receiving
situation. The antenna is the source. So if you use a cable that is the same
impedance as the scanner input, there will be a match, and a SWR of 1:1
on the cable, regardless of the antenna feedpoint impedance.

We're so used to thinking of the antenna as the terminating load for our
transmissions that we forget that this isn't true in a receiving situation.

Source record: 173714

Any one interested in exchanging frequencies for this area?
Preferrably in ScanStar acceptable format (.swg), dBase (.dbf) ,comma
delimited ASCII (.csv) and Scancat (.frq) . I've been downloading
other freq. files, but there not in the correct format and I've been
converting them over to (.swg) and comma delimited ASCII (.csv).
Here's a few to start.

Have you ever seen a regulated plate supply in *any* vacuum tube amplifier? The maggie usually acts as the second half of a voltage doubler circuit. The doubler capacitor acts as a smoothing filter for the 120 Hz AC. There may be some residual "hum" on the FM signal, but that's easily filtered out at the receiver.

I live in Cuyahoga Falls and quit monitoring the Falls police about two months ago (I was sick of hearing all those "exciting" barking dog and parking complaints). However, the last time I listened, the police traffic was not scrambled or encrypted and was active in the frequencies you have listed.

The two main Stow, Ohio frequencies are: Stow Police 155.190, Stow Fire 154.370. Also active are:
Kent/KSU/Brimfield Police 155.310
Kent Fire 154.235
Tallmadge/Munroe Falls/Mogadore Police 159.150.

Hope this helps.

Ok, you need a receiver for 461.665 MHz. Considering the frequency, what you need is a NBFM receiver. And since you only need that one frequency, it can be crystal controlled. Now a single channel FM receiver is about the simplest sort of receiver you can build. The IC manufacturers offer complete FM receiver subsystems on a single chip. Check Motorola's website for application notes for their FM receiver subsystem chips. You'll find that they have already solved this problem for you and offer an evaluation kit.

For your two way needs, sounds like you need a Part 15 setup. You could build this with discrete components down in the AM broadcast band, or you could do it in the 49 MHz band using NBFM. Again Motorola to the rescue. The MC2833 is a complete FM transmitter on a chip designed for cordless phone applications at 49 MHz. This is just the ticket for your application. Use one of the FM receiver subsystem chips you found above (the MC13135 is a good one) to make the companion receivers. Add a LM386 audio amp to drive a speaker.

>Randy Cook wrote the original TRS-DOS.

And, he embedded his name and claim of ownership -- encrypted -- and didn't tell them. It also showed up in NEWDOS, which was amazingly enough a copy of TRSDOS with third party patches applied. Brazen! (I think they eventually got sued, then wrote NEWDOS-80 from scratch). When Tandy found out about the embedded text, they changed it from "RANDY COOK" to "TANDY CORP". They were imho lucky it only required substituting three bytes! <g>

There was some obscure command (I seem to remember sys0/sys being part of it) that would bring up the message.

That's quite an interesting generalization about 75 ohm cable. I've used 75 ohm cable for transmitting for years, and have measured the impedance of "50 ohm" cable at over 60 ohms. I've found good-quality cable in both impedances, and garbage cable also in both impedances. Simply marking a cable as 50 ohms doesn't assure its quality, and having a nominal impedance of 75 ohms doesn't mean the quality is poor.

Hi.A friend of mine that works in Parker Center said that LAPD will
soon go digital from analog soon.But my friend also said that LAPD will not
go digital system till Motorola fixes the outdated Motorola MDT's that has been
plauging
the LAPD.Will update you all when LAPD will go digital.Anyone else got any
more to add or further info?

Find another PD to monitor.

Are you sure it is DVP and not voice inversion? what do you hear when you monitor the freq? do you hear any noise at all?(besides the carrier) if it is true digital encryption you can forget about listening to your department.

If you use the channel locking feature (locks the rotary knob) it cannot change channels. Also, a firmware upgrade from Vertex allows for channel or group scan and also increases the time (about 1.5-2 seconds I guess) you need to hold the power switch before the unit Turns Off. Turning it On still takes just a quick push of the power switch.

As a user that has owned both Visar and VX-10 I strongly recommend the VX-10 for it's advanced features and field programmability.

Good luck, Bryan Johnson/KC6WRV

Hi Mark,
Congrats on the new scanner and welcome to
the radio monitoring hobby!

> I have a question: where can I obtain the
> frequencies of police/fire/air/marine etc
> for San Diego?

Stop by your local Radio Shack and pick up
a copy of Police Call Plus. Lots of good
introductory info as well as frequencies
for your area.

You might also want to visit my web pages
and poke around a bit. Try both of the
pages listed below for more info.

Good luck and happy monitoring!

Strong signals,

>>unit!! (even though the box said it was!)

You will not be able to lock on a frequency at all with a Spread Spectrum phone.
This would be a good indicator for you. You will get vastly floating frequency
readouts due to the simultaneous transmissions going on.

>There are other methods of spread spectrum. One of them is frequency
>hopping.

Frequency hopping is not the same as spread spectrum. Hopping is more analagous
to trunk systems.

>Regardless of whether those "digital spread spectrum" phones really
>are spreading or not, they definitely use a form of modulation which
>the average scanner won't pick up. That eliminates all but the most
>determined radio monitoring enthusiasts. Not a bad bang for the
>buck...

Actually, it eliminates all radio monitoring enthusiasts. So far, anyway.

A cheap solution...??
You're getting a harmonic of the 46mhz cordless band. I have the same
problem with my motorola cordless and my 2 mtr rigs. My cordless give me a
choice of channels with a button push. That solved <moved> my problem.
Maybe your neighbor's phone is able to change channels the same way.

I just acquired an older military R/T, model number RT/159B/URC-4
It operates on 121.5 and 243.0, which, I believe are aircraft Guard
frequencies. It is military brown color, 6.5 inches long, 3.5 inches
wide, and a little over 2 inches deep. It requires A+ = 1 1/2 v., B+
105v. It has an internal, extendable "T" shaped antenna. I could sure
use a manual, or any other information about this old timer.

Any help will be greatly appreciated.

DrPepper@iwvisp.com

>Thank you Mr. Alexander. You were the only one who misunderstood the meaning of my first posting. Had lots of E mail about it and everyone but you knew what I was refering to, only things that can poss. go wrong on these type orders.

Well, if that is what it was all about, then I don't understand what the big deal was. You posted two messages, in each, saying that you ordered a product from Bandercom and that it was lost. There you posted two more, saying that you got the products so gee whiz, isn't the company great!!

Why is ordering from Bandercom different from ordering from someplace across the street? Stuff gets lost in the mail all of the time--whether you order locally or from abroad. It happens all of the time. What I don't understand then is why you made such a big damn deal about it.

I agree. I really don't see them flicking a switch one night and being all digital from that point on. It's going to take a lot of testing to be certain that the system will function reliably in digital - they've got a lot of low-level repeaters that will have to be tweaked, and they'll have to determine from square one what the effective coverage of each of these machines will be in digital (think in terms of what is acceptable S/N for digital vs analog).

I wouldn't be too suprised, however if they were to begin some limited tests of digital in the near future - but not at the patrol level... More than likely, it'd be Metro or some of the 'I-''s.

As long as I'm in the mood for predictions - I'll slide out on a limb and bet that full-digital won't happen until 6.25KHz spacing and APCO standards happen... And I'll bet, given the recent moves to strengthen interjurisdictional compatibility, it won't happen until most of the surrounding jurisdictions are ready to go digital as well...

ie, not until the radios get cheap and the sky rains money 8*)

FWIW, the MDT most certainly is not Motorola, but I can't seem to remember who had the contract (I want to say the guys who set up the PO's computer system 8*) --- I've not heard any complaints about the system... most indications seem to be that it works well and stays stable...

AVCBOB (avcbob@aol.com) wrote:
: I would doubt that you will see the LAPD going to digital anytime in the near
: future. Although the ASTRO's can go digital, the older base stations can't.
: They still run MODAT as the system can't handle MDC 1200....digital is a way
: off.

: Also, the existing MDT system is not a Motorola system. I don't know about any
: Motorola MDT's that are "plauging" the LAPD. The current system, although VERY
: dated is working well.

>readouts due to the simultaneous transmissions going on.

I don't understand the last sentence. What does simultaneous transmissions have to do with spread spectrum? Are you assuming the signal will always be near the noise floor no matter what? If so, that's not a good assumption.

A frequency counter usually has a limiting amplifier in front of it. This means it will count the number of pulses from the strongest signal to enter the counter. If the spread spectrum signal is close enough, it will be the strongest signal around. You will get a reading. What that reading means is another story.

If you count the frequency of a direct sequence spread spectrum radio, you will be counting the average number of pulses per second this radio puts out. Most DS designs I've seen use BPSK with the spreading sequence. You can count the frequency of a modulated signal, much like you can count the frequency of a wideband FM signal. The secret is averages. Over any given second, the number of pulses your frequency counter registers will average out to one frequency.

So, yes, if you happen to have a hand-held frequency counter very close to a Direct Sequence spread spectrum signal source (such that it is the strongest signal coming down the antenna) then you will count the center frequency of that signal. That isn't too hard to do considering that most such phones can radiate more than one watt of energy...

>>There are other methods of spread spectrum. One of them is frequency
>>hopping.
>
>Frequency hopping is not the same as spread spectrum. Hopping is more analagous
>to trunk systems.

Frequency hopping is where both stations rapidly and synchronously adjust their frequencies in a pseudo random sequence. It is not trunking. Trunking is where you park your signal on some channel while you're in a certain coverage area. It resembles cellular telephony in that respect. Frequency Hopping spread spectrum is far more rapid. It runs continuously with rates of much less than one second between frequency hops. This will scatter the signal over a

number of channels.

>>Regardless of whether those "digital spread spectrum" phones really
>>are spreading or not, they definitely use a form of modulation which
>>the average scanner won't pick up. That eliminates all but the most
>>determined radio monitoring enthusiasts. Not a bad bang for the
>>buck...
>
>Actually, it eliminates all radio monitoring enthusiasts. So far, anyway.

Except against those hams like me who are building spread spectrum
radios of our own. I have several prototypes on the bench right
now...

Figures....one who asks a question is given a hard time by a ham who should know better....after all, aren't we supposed to be ambassadors of our hobby??

In a broad sense, I suppose if you wanted to build a scanner it could be done. A scanner is nothing more than a receiver with several astable vibrator circuits (in the primitive form) with Radio Shack parts. Aside from 800, what is there to listen to above that in your area?? As a cost effective means of getting 800Mhz reception, get a older Novatel or Motorola cellular phone. Put it in test mode, punch in the channel you want to monitor and you are in business. You could use the existing receiver circuitry as a foundation for reception of higher frequencies with a converter. Me, I would find a used scanner that can be modified for 800 or one that does with no mods...after all, several million were made prior to ECSPA. Hope this helps.

For Sale:

AOR AR 8000 wide range receiver
(This is the original cell capable model)
- Receives .1 - 1900 Mhz.
- Modes: AM, NFM, WFM, USB, LSB, AUTO
- 1000 channels, 20 banks.
- Auto-store, search and scan lockout.
- Tons of other features.
- Has sputtering squelch mod done.
- Has slight wear on keypad and by the tuning knob.
- Unit works great.
- Box and Manual included.
- Ni-Cad Batteries included.
- Recharger and antenna included.

Optoelectronics OptoLinx Computer Interface
- This unit is 3 months old.
- Works and looks like new.
- Allows computer control of AR 8000.
- All cables included.

PRICE for both: $625 or best offer.
(Money order only, no checks, please)

Reason for selling: I have too many radios already, and I just
bought a PRO-2006.

REMOVE NOSPAM from my return address.

>Can the BC200XLT be cell restored with the correct 30 kHz steps?
>
>Or do you just have to live with some of the freqs being off center?

The BC200XLT is set at a default in the CPU to ONLY receive that range in 12.5 Khz steps. I had one and upgraded to the BC2500XLT which has more channels, more features, and the 30 Khz steps needed. It made a big difference. I was missing a lot of the cell channels with the 12.5 Khz steps.

>> Can pro 51 be modified for 800mhz?

The Pro-51 was recalled a couple of times to fix the ability to receive the cell frequencies. The keypad trick is the only means available on a Pro-51 to load a cell freq into a channel then store that freq with the monitor feature. You must always keep a cell freq in one of the channels and then search up or down from that frequency. If you lose the stored channel you must do the keypad trick again and that wipes out all the frequencies you had programmed in prior to the keypad trick. Confused enough now !!!
I beleive the last model that could do this trick was a Pro-51 with the date code of 7A4. I tried the trick on later models and NO GO.

You know, it kinda strikes me as funny the way a lot of folks have this killfile mentality.

Why, you ask? Well, if taken to its ultimate conclusion, one would only see a blank screen when reading this group!!

This is somewhat akin to call-blocking everyone you have ever disagreed, etc with.

You see, it may just be that the very person you killfile has the answer to your question!!

And, that is really not the point. It seems to me that the point is that the continued anti-social behavior of a few has a detrimental effect on everyone who reads this group. I do not have the answer, but if you are personally acquainted with such a person, why not take the time to try to persuade them to stop it? I know this sounds a little on the "goody two shoes" side, but you never know what might happen if you approach them on a personal level and ask them to reform.

Then, if that doesn't work, we can always overwhelm them with . . .

Bill

Does anyone know if there really ARE any spread spectrum cordless phones
out there?? Everyone I have seen that says on the the box it is a
"spread spectrum" ALSO says that it will switch channels if it detects
interference, and the phones will say they have 20 or 30 channels.
(This doesn't make any sense, as that is not how spread spectrum works.)
One Circuit City store actually had one pluged in, and when I brought
my portable frequency counter with, I noticed that it would give a
reading on one ONE pair of frequencies, and was NOT a spread spectrum

unit!! (even though the box said it was!)

Take the antenna off, look down on the port on the scanner and use a
very small awl or long brad to tighten up the gap, should look something
like this ~.~ , move the ~ closer to the center so the tit from the
antenna makes a good contact, that should help.

The fact that your counter gives you a steady reading means very
little.

These "Spread Spectrum" phones are probably of the direct sequence
variety. This is the system where the modulation is scrambled
(usually XORed) with a repeating high speed code. This extra
modulation "spreads" the signal because of its wideband nature.

If you have enough signal to noise ratio, there isn't much to prevent
your counter from counting the center frequency. The beauty of this
method of spread spectrum is that it can ride close to the noise floor
(if you turn the power down) such that others might not even notice it
against the usual background noise.

There are other methods of spread spectrum. One of them is frequency
hopping. This is the method with which most are familiar. Another
method is wide band pulse phase modulation in which pulses with
pseudo-random time intervals are used to gate and integrate a signal
off the air.

These are less likely to give you a stable frequency counter reading,
though if their chipping rate is stable and close to your counter's
gating rate, you could get a spurious but "stable" reading.

Regardless of whether those "digital spread spectrum" phones really
are spreading or not, they definitely use a form of modulation which
the average scanner won't pick up. That eliminates all but the most
determined radio monitoring enthusiasts. Not a bad bang for the
buck...

While everyone else is chasing trunked systems I seem to have a
different problem.
I live in a rural area an the fire dispatch frequency is the same for
three counties about my area.
My scanner is on whenever I am at home. we use tone to set off
the pagers the local firemen carry. they also use tone to set off the
siren at the local firehouse. I would like to know if anyone has ever
heard of or has built a piece of equipment that would filter out or pass
the tones so I could know when a local event occurs.
I get deaf to the scanner and don't always hear the thing.
Some of the dispatches are from up to fifty miles away.

> true digital encryption you can forget about listening to your department.
>

Motorola has at least two digitally encrypted voice radio systems
that I know of: DVP and DES. DVP (for Digital Voice Protection)
is an older system and used CVSD (Continuously Variable Slope
Deltamodulation) to digitally modulate analog speech and compress
it into a reasonable bandwidth (it uses about twice as much bandwidth
as standard NBFM -- you need IF filters around 25 KHz in bandwidth
to properly receive it). I'm not familiar with their DES system
and can only guess it uses the old NBS (now NIST) DES encryption
standard.

After converting the analog speech to a digital data stream with
CVSD, DVP radios then run the digital bitstream through a binary
shift register. I don't recall the exact length, but it's around
60-70 bits or so. This is the "encryption phase." Anyone that
knows something about encryption knows that shift registers
generally make weak ciphers.

Next, the resulting digital data is passed through a low-pass
filter (to limit bandwidth) before being passed to the FM modulator.

If you have a background (or interest) in digital signal processing
and cryptography, you might be able to make some progress in
developing an application to crack DVP transmissions. A basic
outline for doing this might be as follows:

1) Make a recording of some DVP transmissions on your computer.
2) Refer to a book on speech recognition and develop an algorithm
to recognize common speech formants. See for example, _Digital
Processing of Speech_ by Rabiner.
3) Refer to a book on cryptography and develop an algorithm to
cryptanalyze shift register ciphers. An excellent place to
start would be _Applied Cryptography_ by Bruce Schneier.
4) Refer to a book on speech compression and develop an
algorithm to invert CVSD. See for example, _Digital Coding
of Waveforms_ by Jayant and Noll.
5) A brute force approach would now involve feeding the recorded
DVP transmissions through the shift register cipher, and
CVSD decoder and then testing for the presence of common
speech formants. This may not be a tenable attack because
of the large number of combinations that would be required.
However, I believe there are a number of published attacks
on shift register ciphers one or more of which may be adaptable
to an approach similar to this one. See a text on cryptography
for details.

Bill Cheek is going to claim that this is way too technical an
article to be appreciated in this newsgroup. However, someone
asked, and it's a subject that I've given some thought. If
anyone is seriously interested in trying to decode DVP transmissions,
I can provide detailed information on the radios, including
which variant of CVSD modulation is used, how long the shift
register is, etc.

Disclaimer: The above discussion is for informational purposes
only. I don't advocate breaking the law.

1925. Request for Comments on ScanWare's FCC FRS

Newsgroup: rec.radio.scanner
Date: 1998-01-16 00:00:00 UTC
From: G McAvoy <gmcavoy@oz.net>
Message-ID: <69p38ccnt1@hourglass.oz.net>
Source record: 173740

Request for comments from current and past users of ScanWare Associates FCC Frequency Retrieval System (FCC FRS).

I preface these remarks with a disclaimer that NOTHING is currently being sold by ScanWare relating to the FCC FRS and that NOTHING is being planned for sale as a result of this proposal. The FCC FRS has been a freeware product since the summer of 1996 and we have every intention of having it remain as freeware. If you are unfamiliar with the product, you may obtain a copy from the following URL: http://www.wvsc.wvnet.edu/~fcc/index.html

Traditionally, the FCC Master Frequency List, containing great amounts of technical data, was large and very difficult to handle as a database. Accessing information from this vast file was both time consuming and very difficult for the average computer user. The FCC FRS was developed primarily for amateur radio operators and scanner listeners as a tool for easy access to the FCC's Master Frequency List. It was soon realized after releasing the product that the audience for the program expanded to include numerous local and national government users, schools, commercial radio & TV stations and many two-way radio service shops. The software evolved through several editions culminating with Version 2.15 in the summer of 1995. At that time all sales of the product were ended and it was released on the Internet as a freeware offering. The last revision of the user's manual was done in 1996 for version 2.15 and it has not been subsequently updated since the program is no longer a source of income for ScanWare. Although the program is quite user-friendly, many novice users have found that the manual was a great help with program familiarization. Because the program is still readily available and quite popular, it is felt that a revision of the manual would be a most welcomed project. In order to accomplish this project in the minimum amount of time and to provide the most benefits to all, we have decided to survey current and past FCC FRS users to find out how you use the program and determine what input you might have for possible inclusion in a new manual. When completed, a copy of the revised manual will be place on the above mentioned web site for free access by all.

If you are a current or past user of the FCC FRS, you are invited to submit your input for our survey. You may obtain a copy of the FCC FRS Users Survey by return e-mail by simply sending a reply to this message. On the Subject line of your message, insert the words "FCC FRS Survey". No text is required in the body of the message. A copy of the survey will be sent to your e-mail address.

Thank you for your interest in this project.

Dude, near as I can figure, if you post to the newsgroup using your real E-mail address, you become fodder for these spam-scammers. They have programs that go through the usenet and extract all of the E-mail addresses. They then turn around and spam these E-mail addresses for whatever they're spamming. I'm pretty sure that's how it works. Go ahead and change the way your reader posts your address. Some people insert a few characters into the address that makes it different from the *real* address and then contain instructions in the body of the message to "remove the double "i's" from my address to replay." I guess this works because the spammer's E-mail address capture program just snatches the addresses and doesn't perform instructions typed in by the poster.

Incidently, Deja News is one of a spammer's greatest resources for targeting specific market (i.e - got a bunch of slotted, three pronged widgets you wanna unload? Just search Deja News for the newsgroup of widget hobbiests, pull the E-mail addresses, and spam away!" But Deja news is a wonderful resource for the rest of us too. I just hate the spam. But the USENET is tops in my book. First rate for getting expert advice on any subject imaginable.

Because of the USENET, I've got the right scanners, the right modifications, and a working knowledge of the hobby. All because of expert advice from knowledgeable people who *really* know their stuff. You just gotta filter out the spammer/idiot factor. (small price for the benefit of USENET if ya ask me.)

Well Glen, looks like you are trying to tend to my business also.I said what I said and ment what I said and don't have to answer to anyone on this NG about MY feelings about a matter that I was involved with. No one knows what was going on with MY deal but ME. I tried to inform the people who read this NG postings about a situation I was in with a foreign company that I had never dealt with before and did not know what to expect because it was going on a month since the deal was made, they had my money and I had nothing. I did state that I would inform all who took interest in the posting that I would inform them of the outcome of the matter, which I have done. Put the shoe on the other foot and see how you would feel in the same situation. Hell I did not know what to do so I wanted to inform others so they would not get involved in such a deal. Well, the way I feel is that all who see what I was trying to do at least know what can happen and now know what did happen. For the rest of you that think I did wrong,So be it, its all over and done.

Well Denis, you made the comment in a public forum and I replied. Take your own advise pal and I quote "if you don't like what I said, quit reading it. It
seems to disturb you when you read it , so stop and maybe you will settle down."

> what I said and ment what I said and don't have to answer to anyone on
> this NG about MY feelings about a matter that I was involved with. No
> one knows what was going on with MY deal but ME.

It may be your deal but you brought up in a public forum. If you can't handle the comments then don't post in public. If you do post in public don't whine if everyone doesn't understand your motive or what you are trying to say. I merely commented on your remark to Mr. Alexander claiming nobody else misunderstood you. WRONG! Michael wasn't the only one as you claim. Clear now Denis? Good.

1937. Canadian Frequencies

pverlaan@ccco.net, when pressured, spilled this about Canadian Frequencies:

pv> I need info where to get canadian frequencies.

http://spectrum.ic.gc.ca/pub/tafl has the Technical & Administrative Frequency List, a government-published series of lists containing all the licensed frequencies (except protected ones like police and military) in the country. They are separated by the District Office issuing the license (ie. the ones issued from Calgary are DO23*.ZIP).

The above link will put you someplace into the archives; if you wander around backwards and forwards from that point, you can find an HTML that gives you the lists, a text index, how to read the lists, and how to set up your favorite database application to read the list in and put the data in a database.

Source record: 173753

The Police Department in Hobbs, NM just went to a GE EDACS trunking system, and my high-dollar AR8K was gathering dust from not being used. I called Terry Brennan, the inventor, and sent my 8K to him to have the G/Wiz board installed. About 2-3 weeks later (during the Christmas and New Years Holidays) my scanner was shipped back. It is amazing. All of the annoying data and beeps are gone. All I hear are the voices. The PD transmits "buzz-saw" data that hops channels sequentially in upward fashion. The data stays on each channel for about 1.5 secs before moving on. Couple this with the intermittent MDT data and the three beeps that signal the end of each voice transmission, and scanning with an unmodified scanner is pretty much non-existent.

At Terry's suggestion, I included a tape of the audio from the system. He installed the board and tuned it to my system for the same price. The board cost me $89.95, and IMHO, it was well worth it.

You can reach Terry through ScannerMaster@aol.com. Email me if you need any additional info.

Jim Hardy,
listening again.

Behold brothers and sisters, I bring you the profound story of how King Mackey the Great became so. It is an exciting tale filled with wonder, awe, and heroic deeds. Come closer, as I relate this grand history.

In the land of Scannerdom, the county of Power Supply was plagued with a terrible injustice. The evil mercenary force from Capacitor held the people of Smoke prisoner. Repeater, the ruler in exile of Power Supply, offered a rare and unused Radio Shack battery card to anyone who could free the people of Smoke from their Capacitor prison. A young and fearless warrior stepped forward to take up the gauntlet. Repeater told him of the dangers but the young man was undaunted and resolutely set off to free them.

When he arrived at the gate, Mackey was challenged by the fearsome guardians, Positive and Negative. So terrible were these mighty sentinels that even the renowned guardian Cerebus trembled when faced with Positive and Negative. Armed with his trusty screwdriver he didst battle with them. In the hands of a true warrior the screwdriver is no common weapon. Our hero, battle tested and proven in the labs and urinals of Technical School, was much more than a professional. He was a Grand Master of the Number Two Phillips Blade.

The guards fired spinning hex nuts and sliced with the dreaded razor sharp quartertwenty threads. Again and again, using every feint, lunge, and parry the guardians had learned in centuries of defending the cabinet, but to no avail. Mackey maneuvered himself and with one swift strike, he ended it. He had touched both guardians in the only way to kill them. He bridged the gap between them in a move only a Master Bladesman could execute, the Short.

The Capacitor force exploded from the cataclysm releasing the Smoke from their electrolytic bondage. Afterward, the Smoke rewarded Mackey with their highest honor, the Diddler of the Spark.

Mackey, hoisted by his own petard, began the journey home. In the land of Recdotradiodotscanner, he was attacked by the Legions of Ennui. These were no ordinary warriors, but elite shock troops. Armed with the latest in Apathy, Disdain, and Contempt, they lay seige to our hero.

For months, a battle of attrition was waged. One after another, mighty warriors all, they fell. Even I, your humble scribe was a soldier in the Legion of Ennui. Alas, I too, fell before the great Mackey. No one could understand how a single man could withstand such an onslaught as we heaped upon him. Then we learned the source of his great strength. He was the most favored disciple of the malevolent gods, Fraud and Liar. They had taught him the secret fighting languages of Turpitude, Innuendo, and the most deadly of them all, Obscenity. Under their smutty tutelage, he repeatedly repeled the attacks with adroit displays of oratorical onanism.

There was a point in the war when we thought we were going to prevail. We had Mackey surrounded, he was in everybodys kill file, and his ISPs were terminating his accounts as fast as he could login. He had been beaten back to where he stood alone, armed only with a 300 baud modem and a Commodore 64.

Sadly, we all were victim to his great strategy and now he sprang his most devastating weapon. Surrounding him with our keyboards poised for the final death blow, he hoisted his hands above him. Like Moses bestowing the Ten Commandments to the chosen people, in his hands his mail-order diploma proclaming him Master of Communication Technology smote us down.

Cowered by the supreme Divinity before us, a hush fell upon the surrounding army. The only sound was a muffled cough from one of the younger soldiers. We lay prostrate on the ground before him, fearful of his wrath. Who were we to show the temerity to challenge his divine turgescence. We waited. Slowly, he walked through the defeated masses, and went home.

Upon returning to Scannerdom, he found word of his great deeds had preceded him. He was declared Supreme Grand Master Fool of the Universe and the people clamored for his ordination as King. In response, the Church of Scanner Mods proclaimed him King and the great sage and visionary Pope Bcheek presided over the coronation. As he placed the Discone Crown upon his head, he spoke the sacred papal blessing, "This boy reeks."

So there you have it, brothers and sisters. Behold the saga of his fetidness, King Mackey the Great, Ruler of Torpor, Supreme Grand Master Fool of the Universe, Grand Master of the Number Two Phillips Blade, holder of the Diddler of the Spark, Divine Master of Communication Technology, High Priest of the sect of Fraud and Liar, and Orational Master of Turpitude, Innuendo, and Obscenity.

All hail King Mackey the Great Liar.

>Why should anyone care about a missle launch(does it hav an OSCAR on
> board?) What does this have to do with radio equipment?

David:

The missile launches from VAFB are often spectacular and seen over
thousands of
square miles. As launches are infrequent, monitoring the event is a rare
opportunity.
The men and women at Vandenberg do a remarkable job.

As a matter of coincidence, the payload *is* radio related.

Monitor Safely!

Well Denis, time to have that WebTV thingy checked. Others have posted responses to the thread other than Michael or myself. Or do you only piss and moan at people who don't use WebTV?

> Also what do you call yourself doing by low rateing Web TV users? They

When you see clueless newbie like behavior from 3 WebTV users in a row it starts to make one wonder. When you see the same all over the net you wonder why Denis even asks. Must be a newbie, right Denis?

> They just did not have to spend
> several thousand dollars to access the web as some people have done.

What the hell does that mean? I spent $20 to access the net. So what?

> Good day and still,Best wishes to both of you.

Nik Simpson wrote:

I have a strange problem with my cable setup which I think must be RF interference. My old cable box used to have a strange wavy pattern on channel 19, I assumed this was a problem with the Cable company. I recently switched to a different cable company and different cable box, but I still see the wavy lines on channel 19.

Currently cable comes into the house and goes to a powered two-way splitter/signal amp. From the splitter one feed goes direct to the TV, the other goes through the cable box and then to a VCR. It doesn't matter which feed I watch I still get the wavy lines. I've tried just taking the direct to the TV without the splitter and I still get the problem so I'm stumped, anybody have any ideas on what to try next?

By either upgrading to a lower loss coaxial cable and/or raising the
antenna and/or changing the antenna to something that's more resonanant
on the 800 MHz band will improve reception.

If most of your monitoring falls in the 800 MHz range, you'll be fine
with a decent cellular phone antenna (get the one with the coil in the
middle - has 3 db gain). Just lop off the connector and put on
something that will fit your radio.

> Thanks.
>

The most difficult part is obtaining the schematics for that kind of system, which you will need, unless you plan to design it yourself. There are many ways to pick up those frequencies and the real work comes in designing a de-modulator that works correctly. I am not sure how those frequencies get modulated, does anyone know for sure? I would assume standard AM modulation like most analog signals.

You certainly can pick up the parts from radio shack, however, as implied earlier, the real problem is just determining which parts to pick up.

If I was thinking of doing this I would probably start with a receiver that picks up a different range of frequencies and try to determine which components need to be changed. On older systems this would probably be alot easier, today you will probably have to deal with a PLL circuit (Phase Locked Loop). That is where I would start. Try to see if you can find a PLL that will tune in those frequencies. Most PLL's that are used in commercial scanners will, they are just blocked, using other circuitry, from tuning in some frequencies. You may even be able to get a PLL from a car stereo to tune in those frequencies by just changing a few of the circuit support components. Once you figure out how to get a PLL circuit going that will lock in the desired frequency, the rest is much easier. I would strongly recomend you get all the INFO you can on PLL's and go from there.

As for all the other circuitry that will allow you to actually demodulate and hear the intelligent signal once you have tuned in the desired frequency, there are a zillion books on that at most libraries. If I am correct about it being an AM signal, just apply those basic principals to the PLL circuitry.

1969. Happy scanning.

Overview

Frequency Manager is a database program
designed to help organize and manage radio
frequencies that amateur radio operators and
scanner enthusiast use. With Frequency
Manager you can store, sort, print, and search
for frequencies.

Frequency Manager uses the Paradox Engine to
manage its database. Each Frequency List file
has 9 fields. They are Class, Service, Frequency
, Mode, Call Sign, Note, Brief, Last Monitored,
and Rating. The first three fields, Class, Service,
and Frequency, are key fields. Key fields cannot
be blank, so each record must have a Class,
Service, and Frequency. Key fields are used for
sorting the Frequency List. You can change the
way the list is sorted, but if you don't specify a
different way to sort, the list will still be sorted
according to the Class, Service, and Frequency
fields. Frequency Manager saves each record
as you add it. If you make changes to a record
in the main window then you'll need to choose
the Update button to save the changes.

The Class field helps group similar frequencies
together. For example, you might want to have
classes called "Fire", "Police", "EMS", and
"Air".

The Service field is for more specific information
about a record. For example, you may want to
enter the city that is using the frequency (i.e.,
"Fort Worth"). You could also enter even more
specific information like "Fort Worth F1
Dispatch".

The Frequency field, of course, is where you enter the radio frequency (i.e., 856.4375). A frequency can be any number 0 to 999.9999.

The Mode field is where you specify the method of modulation. For example, you can enter "FMN" for narrow band Frequency Modulation.

Use the Call Sign field for storing the Call Sign or Letters for the frequency. Continuing from the examples above, the Call Sign for the Fort Worth Fire Department would be "KNGD801".

The Note field is used to store the name of a DOS file which is eight characters followed by a period and a three character extension. For example, you might have a file called FWFD.TXT that has detailed information on the Fort Worth Fire Department. If you have entered a file name here, when you choose the Edit Note button the editor will start and the load file.

The Brief field is used to store brief notes about the frequency. For example, "Station receiver check at 1900, daily".

The Last Monitored field is used to store the date that the frequency was last active on.

The Rating field helps you sort your frequencies based on 10 ratings that you can edit.

The Offset field is used to store repeater inputs that are common to amateur radio frequencies.

The Tone field is used to store squelch tones used on the frequency.

The Aux. File field is used to store a filename to attach a file of your choice to the frequency.

The Previous/Next scroll bar moves from one record to the next in the Frequency List, and the current record number is displayed along with the total number of records above the scroll bar.

>From here you should check out the other topics listed in the Contents.

Anyone who takes the time to post whining post such as these has no room to talk of IQ's. This is the first time I have taken the time to acknowledged nit wits such as this, and I don't know why, maybe it's because I accidentally double clicked on the thread and had enough coffee in me that I felt like typing something, however I go to these groups to gain knowledge of the title of the Newsgroup. It sure seems to me that if I or anyone wanted to read a bunch of whiners & bitchers post I or they would dig up a whiners or bitchers newsgroup. However I don't know much about the guy you people are referring so maybe he does deserve whatever, but the same goes for him. He sounds like the child who needs attention anyway he can get it, negative or positive, or he's trying to sell something. Sorry... I'm in a bitchy mood this morning myself :)

Tis All..... lets try to keep to the topics of the group.

1978. Newbie Question on Purchasing RS Pro-2037

Newsgroup: rec.radio.scanner
Date: 1998-01-17 00:00:00 UTC
From: dmahony@ican.net
Message-ID: <34c0d67c.528545@NEWS.ICAN.NET>
Source record: 173489

My son is about to start working as an air traffic controller. I would like to purchase a scanner to listen to him and have seen a RS Pro-2037 on sale.

Does anybody have any quick comments about this unit before I take the plunge into Scanner Land?

Thanks in advance,

Don Mahony

1979. Newbie Question - Purchasing a RS Pro-2040

Newsgroup: rec.radio.scanner
Date: 1998-01-17 00:00:00 UTC
From: dmahony@ican.net
Message-ID: <34c1d82e.962592@NEWS.ICAN.NET>
Source record: 173490

Sorry about the previous post, in my excitement I said the wrong model number. It should be a Pro-2040 as this has the aircraft band for ATC.

Any comments? Would it be a good choice for a first time scanner?

Thanks again,

Don Mahony

1980. 800 Mhz Scanner Buzz/Noise

Newsgroup: rec.radio.scanner
Date: 1998-01-17 00:00:00 UTC
From: adwilson@mindspring.com
Message-ID: <69qmgc$rbd@camel18.mindspring.com>
Source record: 173491

While scanning the Hillsborough County FL Sheriff frequencies in the 856 to 868 Mhz range I am receiving a loud "Buzz" whenever there is not a voice transmission is progress. I believe the Buzzing noises are digital transmissions. Does anyone know if these digital transmissions are part of the sheriff's system, or are they false image transmissions from another frequency ??

My old scanner had an image frequency of - 21.400 Mhz. I recently purchased a Bearcat SC-150Y 800 Mhz scanner. Does anyone know the image frequency of this Bearcat scanner ??

Thanks in advance, Al

DICK Kendrick stupidly babbled:

> Several people have visited the ARRL Web Site (www.arrl.org), and
> searched, finding nothing
SNIP to preserve bandwidth (something Kendrick has never heard of!)
> Regarding the search for "john mackey," the first, third, and fourth
> hits showed only because of "John" and "Mackey". The second hit
> refers to The ARRL Letter for July 5, 1996. That was the issue the
> contained the item about PARG catching a jammer.
> Regarding the search for "ka0ssf," the only hit was a duplicate from
> above.

You really are a poor lost little FOOL aren't you!!!! OBVIOUSLY, *YOU*
don't know HOW to use a search engine CORRECTLY or else have trouble
reading.

I searched the ARRL web site & found SEVERAL listings for me. Here, I
will send a resonse to this message with a capture of
a simple ARRL listing with the URL so you may see an example.

> The next article is from the HamRadio Online web site
> (www.hamradio-online.com), also reproduced below in its entirety,
> does show you as author. Finally, the item in The ARRL Letter is
> shown below as well. It does not credit you as author either.

NO, but it does credit me as you SOURCE, you IDIOT!

> It is interesting to note that the HamRadio Online piece appeared
> in the June 1996 issue and the PARG piece appeared in July 1996.

So what?

> Why would your own group not credit you with authorship?

Because I am not an attention starved glory seeker like yourself.

> you use the email address of someone else (mscott@teleport.com)
> instead of your own?

Because at the time of that posting, I did not have an internet account,
& mscott@teleport.com is the chairman of our membership committee. It
was intended for those who wanted info on joining PARG.

What difference does any of that make anyway?

> (March through August 1996) that you were using one of eight bogus
> addresses because you were stealing Internet access. Let's see,

> you were using the addresses:
> John.Mackey_Jr@p234.f40.n105.z1.fidonet.org
> John.mackey_jr@p234.n40.f105.z1.fidonet.org

same addresses, so what?

> Here.now@present.com
> no.address@anywhere.com
> no.address@anywhere.gov
> No-place@anywhere.org
> no--place@any-where.com
> no__place@any__where.com

The netscape program requires an address to post to newsgroups. At
the time I had *FREE* internet access thru my work but we did NOT
have a mail server set up so none of us had mail addresses. Again,
WHAT DOES ANY OF THIS HAVE TO DO WITH ANYTHING?

> you lied.

No I have not. All you done is bitch about my e-mail address & bring up
other un-related stuff. YOU have NOT demonstrated anything that proves
anything.

You are such a PUTZ!

> And now, the evidence:

> ==== Article from HamRadio Online, www.hamradio-online.com ===
> ==== June 1996, reproduced without permission ===
>

I know I am going to hate myself for getting into this - but I just can't resist!

I have a 10metre half wave dipole at 60 feet above ground.
I have a tansceiver with a built-in automatic impedance matching circuit (Antenna Tuner).
What co-ax impedance should I be using?

I would like to get maximun signal transfer on both TX and RX.

1984. Just purchased my PRO-26

Newsgroup: rec.radio.scanner
Date: 1998-01-17 00:00:00 UTC
From: bryan@cybernex.net
Message-ID: <885058166.1248002062@dejanews.com>
Source record: 173495

I just ran out and bought my (2nd) scanner

A RS PRO 26 (Cat. No. 20-506)

Portable 200-channel scanner with continuous 25Mhz to 1.3 Ghz coverage.
It also has the following features:
Hyperscan
Ten channel storage banks
Mon. Mem (10)
Limit search
Direct Search
Search skip (50)
Auto Sort !
Hypersearch 300steps / 5 hkz steps
Auto Store !
2 or 4 second delay !!!
Data skip
Lock out
Priority (1)
Auto Modulation Mode
Weather Band Key
Attenuator

All for just $199.00
Not bad

My other Scanner is a RS PRO-2042 (RS's top-of-the-line Base unit)

Regards

>My 100 XL antenna plug
>has a bad connection.
>It only receives well when I push the antenna
>to the left.

I have had the same problem with the same scanner.
My remedy:
Open up the unit and find where the BNC connector meets the circuit board. The problem is most likely there. Drop a bead of solder on there and tighten up the nut that holds the BNC connector tight to the chassis. This should do!

1992. Antenna and cable question

Newsgroup: rec.radio.scanner
Date: 1998-01-17 00:00:00 UTC
From: ljb@accessone.com
Message-ID: <34c0faaa.136630944@news.accessone.com>
Source record: 173503

For the last couple years I have used a radio shack pro-2032 connected to a radio shack $20 scanner antenna (about 2 feet tall with3 little rods that stick out sideways from the bottom) mounted on a second floor deck railing, and have been quite satisifed with it. I live in Seattle at some point over the last few months the police have quit using their old frequencies in the 460 MHz range and gone to a trunk system. Based on a number of reviews and newsgroup postings, I bought a BC895XLT so I would be able to follow trunked conversations. I'm happy with the scanner, but dissapointed in the reception quality in the 800 MHz band. When I started looking for possible reasons I found a number of postings and web sites saying RG-58 is no good for 800 MHz. That's what radio shack sold me when I bought the antenna. Now for the questions:

Would I get a significant improvement by repalcing the 20 feet of RG-58 with RG-6 or 9913? It will a bit of a job since it runs thru the wall and I don't want to do it if I won't notice a difference. I can see from the charts that the loss would go down, but would I notice the difference?

Would it be worth changing the antenna? I'm renting and can't use something too big or put it on the roof, But I could possibly get somethng a bit bigger and put it on another corner of the deck. That would nean about 20 more feet of cable, though.

Thanks in advance to anyone who reads this and give some advice. I don't know much about this stuff.

I have the following radio gear for sale at the prices listed. Will consider trades for SW radios, scanners, ham gear, meters, accessories, or antennas. Let me know if you want to order or if you have any questions.

Radio Shack PRO-2026 Base/Home/Mobile Scanner-
-100 memory channels, delay, built in speaker, 1 priority channel, lock out, manual, volume, squelch, monitor channel, 1 touch weather, marine, fire, air, and police bands
-comes with original box, home stand, mobile mounting bracket, power cord, and manual
-covers 29-54, 108-174, 406-512, 806-956 MHz (minus cellular)- Have heard that the 2026 can be modified for full cellular through a modification and a possible keypad trick
-Good condition, $150 Shipped

Cobra Trapshooter 3 Radar Detector-
-city feature, mute, built in speaker, volume control, dim, signal strength lights, sirens and light alerts, detects X, K, and Ka band radar
-photocopy of manual, windshield mounting bracket, cigarette lighter power cord
-Excellent condition, $40 Shipped

Radio Shack Mobile Magnet Mount CB/WX Antenna-
-transmits and receives on all 40 channels, recieves all NOAA weather channels, 26.5 inches high overall, can be shortened for use on 10m
-comes with magnet mount, PL-259 coaxial cable, whip, and coil
-Good condition, $10 Shipped

Cobra HH-35 WX Handheld (HT) CB/WX Radio-
-40 channel AM, low battery LED, LED channel display, variable RF power (1 or 4 watts), full 4 watt RF power, channel selector, volume, squelch, 3 NOAA weather channels, built in speaker and microphone
-comes with "rubber-duckie" antenna, cigarette lighter power cord, full set of rechargeable batteries, manual, wall outlet charger/power cord, and the original box
-Excellent condition, $45 Shipped

I've used it for a few days. Very good reception (good intermod
rejection). It has the very nice triple-conversion feature. Nice unit
for the "special" price. I used it in the aviation band with a Discone
antenna. Worked great.

Yeah, sure, whatever.

What is up with you WebTVers any way? One guy posts a message in a public forum and then whines that the people who reply are "minding his bidness." This "FC-DC" guy posts insults and profanity aimed at people who have never said two words to him (and then adds to that by sending threats via e-mail). And still another with a name like "Billy Joe Bob Williams" crawls out from under his rock and says something profound like "somebody been minding somebody's bidness."

That poor man's excuse for a real computer gizmo you bought must be really easy because it is apparent that it doesn't require any brains to operate.

Actually Joe it looks like user of WebTV are going to be classified like the AOLers used to be. Clueless newbies. Also is seems odd that the only defenders of Dennis are from WebTV. Strange ehh?

BTW Joe, seems your reading ability needs some tune up also. As has been mentioned to you clueless WebTV folks numerous times, if you post in the public forum it makes it everyone's business and I will ask you as I asked your WebTV buddies, what part of that is so difficult to understand?

2009. NiCads vs Renewals

Newsgroup: rec.radio.scanner
Date: 1998-01-17 00:00:00 UTC
From: nospam.neilbell@value.net
Message-ID: <34c221f7.18289850@news.value.net>
Source record: 173520

Have been running an experiment for about 6 months now. When you use Ray-o-Vac Renewals in a scannner and wait for the battery low warning before charging them, you are misusing the batteries. Scanners are basically set for for nicads and since they are only about 1.25 v fully charged, the batter warning may not come on until they are down to about 1.0 v.

If you take Renewals down that far, you won't get very good results with them If, on the other hand, you reharg them very frequently, "topping them off" is ideal with these types of batteries. I have two sets of four batteries and change them out after about 4-6 hours of very busy use. That way they work great. I have probably charged them at least 75-80 times. They last longer than nicads, but don't run them down too far!

No it isn't and I would appreciate it if you didn't call me your family names. You OTOH are obsessed with Bill Cheek. Did he spurn your advances or what? You seem to fit that saying about a woman scorned and you the woman. Sheesh.

> BTW, I'm surprised you still have your nose buried in Cheeks's ass after
> that public thrashing he gave you here a while back.

Hmm. So if somebody disagrees or has a differing opinion they are thrashing?
OTOH, if one agrees with somebody they then have their nosed buried in someone's ass? Quite telling Petey. Have you discussed this with your buddies on the mental health newsgroup you have been using for your treatment? Has the group changed your dosage yet? Are you still having the libido problem you were posting about? How's the wife uhhh x-wife? Hehehe, talk about a thrashing! HAHAHAHAHA! You the man Petey. BAWAHAHAHA!

Now go back to the ham radio group and se if anyone can help you hook you antenna to your scanner and help you turn it on.

Don,
Just my opinion, I have a 2040 and the only thing I like about it is
speed. My unit suffers from the worst case of intermod I have ever seen. I
can`t tell you what the best scanner would be for you, but I would look for
something that has a selectable mode..eg...AM, FM, & WideFM.
I think that once bitten by the scanner bug, you will be listening to alot
more than your son, so look for something that has triple conversion or
your going to have a bitter after-taste if you buy something cheaper.
Good Luck & Happy Scanning,
Charlie

The original poster is correct, spread spectrum operation can be and is
obtained in some cases by using frequency hopping. Trunked systems, on
the other hand, do NOT intentionally switch freqs for security purposes;
they merely 'search' for the first AVAILABLE frequency and and make it
available for use. The fact that a talk group may change freqs several
times during a conversation is largely just a matter of spectrum
efficiency on the part of the trunked system.

>else ever seen this.

Hi Joe,

I've observed the same thing. The local PD uses digital encryption and
I could swear I hear a voice underneath the data transmission.
Since the system has many towers (large city dept covering a large
area) I've wondered if somehow the feed is getting messed up on the
way to the remote transmitters.

More likely, the human mind has a habit of "filling in the blanks" -
the old "hear the ocean in the seashell" phenomenon. Considering that
the data sound is close to random noise, your ears are probably just
playing tricks on you!

From: spambuster@greeneggs.com
Message-ID: <69p0f4$it2@elf.wang.com>
Source record: 173760

My Uniden BC200XLT blew the power saving transisitor. I found the white sheet on the net that described the probable cause of the problem, but due to lousy silk screening of the circuit board, I can't locate the correct device.

I called Uniden to order a $25 service manual, and discovered that they were out of stock. The sullen clerk had no idea when they would be restocking the item. When I pinned her down, she suggested that I call back in 10 weeks.

I don't care to mail the unit back to them (I want to upgrade the voltage rating of the caps that have shorted), and I don't want to wait 10 weeks. Can anyone help me with this problem?

Thanks so much:

Belden is a manufacter of cable, not a "type" of cable. They make RG 8 as well as hundreds of other types. I "think" their number is 1 800 BELDEN1 where you can find a local distributer. Alpha is also a good manufacturer of RF cable.

Heh, heh, heh! I certainly hope you don't decide to work on
your television set. It's usually better to have some idea what
you're doing *before* you start turning things.

when you use 110 ac for a stereo, the 60 cycles are changed to pulsed
d.c. ... then a large filter cap. filters out that ac hum. but with a
microwave you don't need that filter. it's pulsed 60 cycles.

> have.

Why would I brag about credentials Bill Cheek does not have? That
statement
makes NO sense (which is normal for you).

> Frankly, a close examination of all the facts would clearly be in order
> here.

Yes, can you do that for once?

> He has also
> failed to Prove beyond any reasonable doubt that he has any of the
> credentials claimed (such as a bachelors degree is some electronics type
> specialty,

Yes, YOU, Cheek, & others have said that Cheek has these credentials
yet for 2 years NOTHING has been given to support such claims.

> There are also numerous time that he has attempted to sidestep the issue
> by means of obfuscation.

Yes, YOU & Kendrick have tried to sidestep the issue
by asking about my credentials, starting about 3 weeks ago. Despite
the fact that the users of this newsgroup have waited 2 years for
Cheek's credentials, you & Kendrick are not wanting to focus on
me. Sorta like a little kid wanting his desert before dinner.

> Far be if for me to point this out to one so highly esteemed as John

Call the cable cmpany, if it is interference from an external source, that means the cable has leakage. All cable leakage is bidirectional, and that means they are in violation of the rules that hey operate under, and must fix it ASAP. If the interference isnot external then it is still their problem as they have a hum induced somewhere in their system of amplifiers in that portion of the spectrum, and need to find it and fix it. If it is local to your house then it is your problem and they will tell you that and you can go buy some new toys to fix the problem. Bruce

I have a pro-62 that I must move. this radio is in fine condition comes with new nicads and wall cube. reason for selling not really a scanner buff.
just to clear 1 thing up before we go any further
1. this scanner was bought by another person on the net and he is returning it to me for the reason above no cell.
2. I posted this for a fellow ham with less than the best intentions. I made no money on the deal however this other ham will not be paying me back due to lack of income. at this point, I have been burned on this if someone wants a good beginner scanner, E-mail me so we can get this deal done. once again it does not do cessular but is 200 channels with hyper scan and listens to everything else. price is $125.00 shipped. I will consider all offers.

Actually John, I asked for your credentials back when you first asked
Bill for his. I even suggested that we both forward copies of both of
our credentials to a third party for verification. You never agreed.

Lets at least stick to the facts. I have no desire to get into the
mudslinging that goes on between you and Bill, but would like
to see that the facts are presented.

>

Hi,

>ust curious if the mod. can be done and can it also be done to the Bc 9000xlt.
>Thanks.

As with most of the most recent RS (mfr by Uniden & GRE) and Unidens own sets the frequency "coverage" is controlled by the main IC rather than a Matrix of Diodes or similar as on some earlier sets.

The US PRO-2042 uses a CPU that has the US cell frequencies blocked out, the version sold here in the UK and elswehere in Europe uses a different CPU (the only different component between the two "models") that does not have the frequencies used by US cellular blocked out.

The only way to restore the frequencies used by US Cellular and allow keyboard entry is replace the main IC (a 100 pin'ish surface mount chip). All other features remain the same.

You can also put the 2042 IC into a 2035 which not only gives you the full 800MHz but also the benefits of the improved 2042 firmware.

Hope that helps.

All the best

Cheers,

>The mods included doubling the channels and adding a strength meter. No
>cellular restoration or cordless phone carrier restorations. If you find
>any mods for the Pro-60, please post them. Thanx.

If you are looking to restore the 800MHz frequencies on a PRO-60 so you
have keyboard entry of said frequencies then your only option is to
replace the CPU fitted in your version wioth the one used in the
UK/European version which has full coverage.

The PRO-60 does not have programmable step sizes as part of its feature
set and at these frequencies it will default to 12.5kHz channel spacing.

Hope that helps.

All the best

> number 20-148 and the 20-148A ?

do not know about up there, but in the US i believe that the
20-148 had 3 wires (hard-wired, not a plug) coming out of the
scanner. power, ground and always on power for memory backup.

the 20-148A had a barrel type power plug in and has one of the
capacitor-battery back ups that lasts about 2 weeks or so
on memory backup with no power to the scanner.

i think that is correct, but maybe someone else can verify this.

PRO-2042: 1996 version of the wide coverage PRO-2035 base
with improved firmware and amber display. Made by GRE.
1,000 channels, but cumbersome 100 channel bank size.
Tuning knob. NFM selectivity is still a problem but
improved over PRO-2035. 10 linkable search banks. Smart
Auto Store feature stores the unique frequencies. Can lock
out up to 200 frequencies from search. Query facility
indicates if and in what channel a frequency is programmed.
Scan skips over empty channels automatically. Can sort
memories by frequency within a given bank. IFs are 609 -
612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than
PRO-2006. Overall, a top grade scanner and second only to
Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042,"
by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

Looking for help on trouble shooting the recieving circuit. I downloaded the plans built the circuit, double and triple checked the board layout and still no data. I checked the pin outs, cts input to the pc. I am using the board layout by wb5nbq. Anyone have any ideas? I am pulling dec. audio from my data ready packet radio and I have a nice clean trunk control channel signal.

any ideas? any way to testing to see if it recieving data or not?

jeff

I know, but think about WHY the FCC made the rule in the first place, they go as far as to outlaw any form of encryption on any band that the government doesn't have a key for, and using a Spread Spectrum method that might not be trackable by the NSA (although doubtfull) would cause a problem.

Your right, technically you are allowed to experiment with new and different transmission techniques, but with them making a rule forbiding codes and ciphers on the Ham bands, you know they will not be HAPPY with Spread Spectrum.

Thanx for the good advice dude, but what I'm really interested in is not to restore the missing cell band, but to restore a "carrier block" that covers the full 800Mhz - 924Mhz band. It prevents the interception of transmissions from 900Mhz cordless phones and Clearnet Systems. I would greatly appreciate any information you may come across since you seem well informed. Thanx again. danny2@globalserve.net

I read the same letter and decided to open up my Pro-26 handheld,(200 channel, if thats the one you mean), in order to really see if this epoxy was over the chip that allows cellular coverage through frequency down conversion. I came into posession of my Pro-26 only two weeks ago, and there was no epoxy over the chip. Needless to say I took a small leap and badda bim badda boom, now I have cellular coverage. The down conversion modification can be found at "KC5TO's Radio Page". Use Yahoo or Alta Vista to find it with a search.

I came up originally with the "jumper" mod for the Pro-26, and I
used the chip location for the jumper for its easy access, however
that jumper can also be placed at several other locations (inside
the RF housing for instance), but its just a bit more tricky to do.

Yea right Bill, like I would really be using Sprint dial-up service if I had an employer's internet (T-1) type connection available.

You, once again, show your stupidity!

(If you have any brains you can read the headers of my posts & tell I am using Sprint dial-in service)

>Anyone have any comments on AOR AR2700's?????

You gave a bogus email address so my response to
you bounced.

I was disappointed with the performance of the
AR2700 I tested for Monitoring Times magazine.
From the FAQ "SCANNER RADIO REVIEW BRIEFS:"

[...]

AR2700: 1995 vintage. 500 channel portable covering 500 kHz
to 1300 MHz. Lots of good features, e.g., 10 linkable
search banks, lighted keypad, per-channel attenuator, S-
meter, battery meter, optional voice recorder and speech
inversion descrambler. Global rescan and pause delays, but
no auto store, data skip, nor battery saver. Internally
generated noise results in broad birdies on AR2700 tested.
Insensitive carrier operated (vs. noise operated) squelch
stays closed on signals unless they are moderately strong,
causing scanner to skip transmissions of interest. IFs are
287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700
Portable Scanner," by Bob Parnass, AJ9S, in Monitoring
Times, October and November 1995.

spambuster@greeneggs.com (aka n1aup@amsat.org) wrote:
> I called Uniden to order a $25 service manual, and discovered that they
> were out of stock.

A few days ago I called Uniden parts and attempted to order the service manual for a BC895, and was informed that "they haven't been printed yet". Given Uniden's apparent involvement in the FCC / Tandy service manual fiasco, I have a few questions for anyone with experience with Uniden.

1) Has Uniden supplied service manuals in the past ?
2) Are any scanner manuals currently available from them ?
3) Is there a magic name / phone number / trick to getting them ?
4) What sort of price do they ask ?

I get the service manual for any new piece of gear I acquire, so that I can perform the inevitable repairs down the road (I kept a Tennelec alive long past any reasonable expectation). I've been bugging my local R.S. manager that he lost a $300 sale because of their scanner manual policy - I'd hate to find that I've walked into the same trap with Uniden.

It's probably because not one in ten law enforcement officers knows the Constitution (which they swore to uphold) or the rights of the citizens, nor even the difference between right and wrong. Just as long as the law says it's illegal, that's fine with them. Look at how many laws we have are nothing more than two guys talking, and one of them says, "Hey, I don't like that. It should be illegal." Thus you make felons out of millions of Americans who have otherwise done nothing wrong. They still haven't done anything wrong.

2117. We only can blame ourselves...

Newsgroup: rec.radio.scanner
Date: 1998-01-18 00:00:00 UTC
From: Bill Bergadano <bdano@cybercomm.net>
Message-ID: <69th6i$t6d$2@ostrich.cybercomm.net>
Source record: 173364

There has been plenty of moaning and groaning, plain old bitching and complaining about the legislation that is being considered that is the deathknell of scanning. And you like myself have probably wondered "why is this happening?". Simple. The answer is simple, and for most of us can be found in your nearest mirror. Yes, there are some law abiding scanner users who would not break the Communications Act of 1934 even if their life depended on it. But there are many in the land of scanning, who they may not like what I am about to say, can't keep there mouths shut.

Instead of keeping that hot news tip to themselves, they call their friend at the local TV station, etc. Now when it comes time to divulge a source, who is it? Right. Mr. Scanner Owner. Instead of last year in the wake of the Newt Gingrich celluar intercept by the Martin's in Florida, who we all know broke the law, but that is something that seems to be frivolous, what happened? Tighter legislation of scanners. More people who do nothing but vegitate in front of the TV every night suddenly looking at every scanner owner as if that person is from the KGB. Case in point: right after this intercept happened, a caller to a nationally syndicated radio talk show called the host and told him how to goto any Radio Shack and by tuning 21 MHz higher than the frequency you can hear cell calls.

Now the guy went techie and the host was lost. BUT! The point is, why couldn't he keep it to himself? Instead of trying to not bring the scanner's

and scanner owner's into a harsher light, here on a national radio program with it's million's of listeners, scannists are subjected to cat-calls by a really misinformed public. That's of course a drop in the ocean.

Now folks, the horse is out of the barn. (The horse for conversation sake

is Rep. Billy Tauzin of Louisiana). We can theoretically keep him penned in

if we do something simple; like keeping our yaps shut. So you hear on the local PD frequency that something just took place in town; instead of calling everyone you know and calling the local TV station... KEEP it to yourself! The folks in the media A) DON'T want our help, b) DON'T need our help. These are PAID people who's job it is is to find and cover news. No one says "hey, let's help Bill out and send him customers at his store". I'll be damned if I am about to help out the same media that misinforms the American public about scanner's and the scanner owners of which I am one.Sorry for this diatribe, but, it's getting annoying every time I come onrec.radio.scanner, or pick up a magazine and hear someone else bemoaningthe loss of things like police, etc on the scanner. Granted we are nottotally to blame; the 'bad guys' have scanner's to stay 1 step ahead of the law for example. But, let us worry about "our house" and let the cops,the media and the rest worry about theirs. We have enough straightening upto do of our own.

If you wish to reply to me, I'd be happy to hear from you at:

bdano@crow.cybercomm.net

Nice scanner. They were the 'eveready bunny" of Regency crystal controlled scanners at one time. They were very popular with fire departments and highway patrol agencies because they were inexpensive and still were able to hold up under mobile use.

Your estimate of their date of production is quite close. I owned a Regency dealership in the 1970's as a second source of income to buy a house, diapers, etc. The R-106s were introduced about 1974 or 1975 if my memory hasn't faded too much by now <grin>.

I just gave away my personal R-106 to a young fellow who wants to become a firefighter. He'll probably get another 20 years out of it unless the agencies he monitors decided to switch to 800 mHz.

The volume controls had a tendency to require a treatment for dust removal from time to time ... otherwise, the audio would disappear. I think the problem was somehow related to the vertical placement which seemed to allow more dust particles to enter the slot created for the up-down movement of squelch and volume control shafts.

If you or anyone else has an opportunity to buy an R-106 again, grab it. They are nice receivers. I saw one listed on a newsgroup recently for $25. That's a good price for a quality scanner.

BTW, Regency made a replacement filter (part number MA-46) for many of the 10.7 IF scanners. If you see one of those kits floating around, you should acquire it, too.
The MA-46 kit really provides for increased selectivity and rejection of adjacent channel interference. They are easy to install.

I hope this is helpful

KEEP IN MIND that the Uncle Bills administration knows it cannot raise taxes, but, it wants more money to spend on government programs and give away to the IMF to bail out other countries.

Therefore, the Commie Clinton admin will be looking for "creative taxation oppertunities". Simply, they will be looking for new ways to rasie fees and impose new hidden taxes that the majority of the public will not see, and therefore, will not rebel against.

Clinton and friends want to control you and tax you into government dependency.

Don't talk about this problem very long-In the USA you will be arrested for monitoring phone conversations.

Quote from Ms. Chong FCC-"As soon as you are aware that you are monitoring a phone conversation you are to cease immediately this pertians to any frequency they may be heard" or "you may be quilty of monitoring phone conversations"

God Bless America home of the FREE & the FCC, STATE LAWS and let us not forget the the ECPA!!!!!

Stay in Canada at least you are free monitor the airwaves without law enforcement busting down your door, not like the USA where you live in a shell and the airways are forbidden to monitor because the are filled with backstabbers, corruption and etc.

>to take care of this problem??

No, he is implying that where there is INGRESS into the closed cable
system from the outside, there is most likely EGRESS of the closed
cable signal TO the outside.

If CH-19 signal is bleeding out of the cable, then it could be interfering
with police and fire communications licensed to use those frequencies
in the real world. Worse though, is some of the other mid-band channels
the cable system may use, which could affect air navigation frequencies.

A leak which allows signal in, also can allow signal out.

Hi Frank,
I don't have a PRO 43, so I can't honestly say how well it performs. The 43 is a much sought after scanner, for two reasons: many modifications currently exist, and secondly, it does perform surprisingly well, much better than the majority of Realistic scanners.
Owning several AOR scanners, I picked my MVT 7100 (used) over the net back in the fall. It runs rings around my AOR 1000XLT, and rivals (in some capacities) my AOR 8K. Single sideband reception on hf (fan dipole, inverted V) tends to overload the front end, as on my 8k. With the attentuator on, sensitivity was not hampered-enjoyed a nice dx'ing session on the maritime bands. Tunes in 100kc steps, nice tuning. Eats nicads-I get maybe 2.5 hours on a charged set. Today I used alkalines, blasted classic rock all day at work, batteries are still going strong. I have just ordered a leather case from Design EQ, this is a very easy to use radio, I intend on keeping it for quite a while. I even sent it back to Yupiteru, Japan for a minor repair, was quite happy with the sevice. My 7100 arrived repaired express mail Christmas morning!! The pricing is great, I doubt you will find it lower. Forget Radio Shack, go with the Yupi. Feel free to e me if you have any additional questions.

> You forgot "bastard rat" <G>

Oh gawd....I sure did. So I looked it up and Mackey
appeared under that heading 843 times.

And "illegitimate rat" showed up with Mackey 844 times,
with the last entry saying, "see also bastard rat".

BTW....you notice a pattern to his posts? Sure
looks like he puts in a lot of his employer's time
here on the newsgroup. Preliminary research suggests
Mackey can't afford his own computer and net connection,
so he uses his employer's facilities.

He's got a whole passel of bed-wetting kids and a
squaw who won't stay home and take care of 'em. So
his money goes to shrinks and baby sitters.

I understand he's on welfare and food stamps, too.
Poor sap........ no wonder he's the way he is.

I'm actually elevating myself. :-)

I go through these cycles each year where I get to
feeling sorry for myself and my lot in life. So
my analyst sends me to heads-up with the likes of
Mackey And Company..... and it works!

After only a few days, I find myself praying THANKS
to my creator for not placing me in the cesspools of
Life where he slapped Mackey and his proteges.

I'm fixing to pop 'em all back on my Shit List pretty
soon and get on with the getting on.

Just this weekend, I built me one bad ass computer with
hair growing all over it....and teeth at both ends.

Mackey kind of inspired me......in a perverse sort of way.

But yeah....it can be good therapy to occasionally traipse
around with mongrels, shitbirds, peckerwoods, vermin,
scum, and curs so damned ugly the only way you can take
'em in public is to first shave their arses and teach 'em
to walk backwards.

Gee Petey, I missed that. From Bill that seems pretty mild. OTOH, if that is you guide than you are near death with the things people are posting about you.

> HA! I bet
> your butt still smarts from that!

You lose, it doesn't. Unlike you Prozac boy, rarely does anything on the net bother me. Do you still run to alt.revenge crying that people are mean to little Petey and you are too stupid to forge messages without help?

> Now shut up and quit pestering everybody, you crazy old fart.....

Only you prozac boy.

Still waiting for the answers there Petey. You know the question concerning your x-wife the studio apartment, teaching piano to little boys, getting your medical advise from Usenet newsgroups and you problem with hooking an antenna to a scanner.

Change the dosage Petey.

x o

x o
```

I want to build a little antenna myself which looks like the drawing
above. The "x" represent the cable and the "o" represent the base wgich
is made of light wood. One length of "x" i would like to make lamda/2
long which for 931 Mhz would be approx. 15.3 cm. Does anyone know where
i have to connect the cables that are coming from the scanner ?
Is it where i put the "." ? Or do i have to connect one cable to a
ground or so; does anyone know ?

Thanks for any help,
Jens :-)

My Yupi crashes in NYC, even with the attenuator on. Just too much RF! A PRO-43 holds up better. Of course, the Yupi offers better coverage. But if urban VHF-UHF listening is more important to you, you might prefer the PRO-43. For HF there's no choice; the 43 doesn't cover that range.

I also find the display and buttons on the Yupi easier to see/use.

>Thanks

From all the documentation I've seen, postings here and there,books I've got, etc, I would assume that the last date code for a modifiable PRO-43 was 2A4 (Feb 1994). There have been rumors of a 3A4 date code working but I have never seen much on this and I would tend to stick with the date code of 2A4 (No "A" in serial number) and before.

Happy Scanning

If this comes about, I would have one hell of a lot more harddrive space ...as I would delete netscape and IE... and get rid of my Internet Service... I have been on the net and enjoy it... But its not worth any more $$$ Than I pay now.... atleast not to me... A good or service is only worth what someone is willing to pay!!!

> pay the price.

OK, Richard that is fine. In the mean time I have the information YOU
want. It (also) is not for sale. The users of this NG have been
waiting
for nearly 2 years for the info YOU hold & only a couple weeks for the
info
I hold. So, after YOU post YOUR info on Cheek's credentials I will then
give you the info you want, in the way you want.

There is no negotiation, as YOU state above. If you want the
information,
pay the price.

The PRO-43's Achilles Heel is the VHF rail band. Try listening to the MTA
frequencies in some areas and its pure pager intermod.

I'm not sure which screws you turned, but I'll bet they affected your IF
bandbass and RF Oscillators on the analog card.
I strongly suggest you take it to your local Radio Shack and have them send it
in for re-alignment. That would be the easiest way to do it.

Of course! A simple search for "quadrasexual" pulls
up 11,633 listings on you alone. A search for "hermaphrodite
brains" yields another 8,282 hits on just you.

I shudder to think of how many times you'd appear under:

-degenerate
-reprobate
-despicable
-faggotry
-maggotry
-bigotry
-pedophile
-imbecilic idiocy
-mongoloid lunacy
-cleft palate
-harelip
-buckteeth
-overbite
-scatology
-nescient radio amateur
-bed wetting kids
-medical advances
-psychological case studies
-athlete's foot of the lips
-nose pickers
-booger eaters
-reprehensible
-loathesome
-queer
-queen
-transvestite
-fairies and magic
-pimples
-proctological surgery patients
-nincompoop
-popinjay
-halitosis

-cirrosis
-pustule
-pissant
-in-grown hairs
-canquer sores of the nostrils
-peridontal fungii
-snivelers
-snot-bubbles
-cadavers
-fetid armpit odor
-nauseating
-disgusting
-fart smeller

Hey, Dingleberry, play like you're a tree....and leave.

Where are you getting this "homo..." tag? What exactly
do you think a "waltzing gay blade" is?

> Like I said in my last post, whydon't Bill, John and whoever else take
> this crap offline?

I don't know. I guess because Mackey can't get at me off-line.
Or if he did, I'd take off his head and shit down his neck.
He's safe here.

> This is not your personal battlefront.

Unfortunately, that is not yours to define......

> There are plenty of folks (most likely 99.999 %) who DON'T CARE
> about your childish little flame wars.

WHO empowered YOU to speak for others? And what nonsense has
it that this "place" is a democracy?

> It's getting really old guys.

Soooo? So, control your own computer and your own newsgroup
environment and make it all go away. You ever consider taking
control of your own domain in lieu of the futile attempts to
control others' domains?

You CAN control your own, you know. You CAN'T control others'.

> Lets get back to the basis of rec/alt.radio.scanner - scanning...

"Lets" - a contraction of "let us"? If so, you're operating
in the wrong frame of reference. This is a newsgroup - not
a classroom; nor a village meeting hall; nor anything else real.

It is virtual. It is truly a stage upon which each participant is totally free..... free, to be victimized as apparently you are..... free to be a rampaging messiah on a magnificent crusade as Mackey is..... free to be a drug-dulled idiot as Petey Joe Boe seems.... or free to just be plain old real as possible, like me.

It doesn't matter one whit whether or not you like it (or me). "Like" has no relevancy here. Neither does "dislike". Each person is totally immune or completely helpless...as ONLY he can freely choose for himself.

If I were you, (which I'm not), I'd choose to be immune and to fortify my computer forces to be impervious to the things you don't like.

But it is.....completely.....your choice. If you like being victimized, then so be it. If you don't like it, then stop.

It is as simple as that. YOU possess the force and the power to control your own domain.

It's up to you. Not me. And not Shitball Mackey.

You need to understand that.

Thanks for the the reply Charlie. I went out and bought one this afternoon and so far it seems ok. Since I am new to this field would you mind explaining "intermod" to me as I am hearing a lot of noise that I do not understand.

2203. Trade my laptop for your cellular capable scanner

Newsgroup: rec.radio.scanner
Date: 1998-01-18 00:00:00 UTC
From: noobody@aol.com
Message-ID: <19980118045200.XAA04399@ladder02.news.aol.com>
Source record: 173477

I would like to trade the following Laptop for a scanner with the capability of receiving cellular (The actual cell frequencies, not images please)
If interested please e-mail noobody@aol.com
Thank you

GRiDCASE 1537 Computer

includes manuals, DOS installed on both hard drives, GRiD DOS utility disk, and soft GRiD computer carrying case.

It works fine.. but the Low Power light stays on... it has ever since I bought it from a friend. He told me the same thing I am telling you. It does not seem to matter, no problems have been encountered because of it. It just keeps on working.

I copied the following from the Users manual for info:

CPU: 80386SX-16 Mhz
with 80387SX numeric coprocessor

Display: Electroluminescent, light-emitting, bit mapped, amber color
80 char by 25 lines, 9 inch screen is 640 x 400, EGA and CGA compatable, but the unit has an internal VGA card and external connector for external VGA monitor.

RAM: 8 MB

Disk Drives: One 3.5 inch high-density(1.44 MB) diskette
One Removable hard drive slot with an installed 120 MB Hard Drive
and an extra removable120 MB hard drive

Interfaces as connectors on rear of unit:
Serial ports include RS-232 9 pin, and a RS-422 25 pin Micro D connector
Parallel - Centronics 25 pin
SCSI- 25 pin connector with Adaptec AIC6260AL SCSI chip interface
VGA -15 pin for external monitor
Keyboard - 9 pin for external keyboard

Other Features:
Built in speaker
72 key IBM AT compatible, tactile feedback. Standard typewriter keyboard spacing. Emulates IBM 84-key keyboard
Clock/Calendar Internal, lithium battery powered

Power requirements 10 - 30 VDC, 60 W, 100mV p-p max. noise

External power supply 100-240 Vac, 47-63 or 400 Hz, autosensing (2 are included)

Optional external attachable battery pack (Model 32161) NOT SUPPLIED

Randy West wrote in message <34c14173.524911@news.deepwell.com>...
>Does anyone know why the GRE Super Converter II doesn't work on the
BC235XLT?
>Was this done intentionally by Uniden?

Well, yes and no. The 235xlt is a triple conversion scanner - designed that
way by Uniden to cut down on intermod and image interference. The GRE
superconvertor was designed for dual conversion scanners. It creates an
image of the 800 mhz frequencies which, when fed to any dual conversion
scanner, works its way thru the IF stages and appears as a 400 mhz frequency
to the scanner. In a triple conversion scanner, that same signal goes thru
an addition IF stage which sends it to who-knows-where. It's still there,
but not in the 400mhz band (probably ended up in the aircraft band
somewhere) So the answer is yes, but not for the reason that you thought.

Hope that helps some,
Phil Smalley

Normally, it would be my policy to stay out of such nonsense, but I really do have to comment on this.

Bill Cheek may not be everyone's favorite person on earth but you have to give the guy credit - he knows scanners and he knows what he's talking about. For all the naysayers out there, where are YOUR books that describe in detail how to add thousands of channels and computer control to a scanner - any scanner for that matter. Sorry John Mackey and company, but it is my humble and honest opinion that Bill Cheek has more scanning knowledge in his pinky finger than you will ever have in your whole life.

Bill is simply treating people the way that they treat him - he has even said so. If people weren't so busy baiting the guy, we wouldn't be having this discussion. Try it John. Try not saying ANYTHING to him or about him for a whole week and see what happens. I bet he leaves you alone too.

Maybe we can have an ending to this ridiculous and juvenile namecalling once and for all. I would like to see that, and so would a lot of other people.

Just my opinion.

Problem is that I gave YOU the terms of how to get the data YOU want
LONG before you mentioned any of your BS. You essentially copied the
requirements I gave YOU, thereby creating a "stale-mate" & protecting
yourself & Bill Cheek by not having to divulge info.

> I have the information you desperately want. If you didn't want this
> information so desperately, you wouldn't have pissed, moaned, cried,
> and whined so much about it the last two years. I will not GIVE you

RIGHT!!! We have been waiting 2 years as you state, & now you come in
& expect to get everything without having to give anything!!! Sorry,
it don't work that way, son!

Mr Kendrick-
After you comply with Steps I have mentioned previously, I will post
the information you want. Remember, this is not a negotiation. If
you want the information, pay the price. Certainly you are smart
enough to understand this simple concept.

I sent an email to WINRadio and they said they are looking into it,
but that it does not do it yet.

On the PCR-1000, Atlantic Radio, who I emailed also, said no it does
not.

>> ratty-tat buzz, that's it. Now it's up to your cable company to
>> get rid of the signal before the FCC catches on.

Nope, the FCC could care less about outside signals coming INTO the cable system -- that is purely a customer issue. Most cable companies will try to resolve the problem while the slimeball paging companies do everything possible to only make matters worse. Often the cable company solution is to stick a garbage channel (like local public access) on the channel with the interference.

> Captain Dunzel replied:
> Interesting, are you implying that the cable company is transmiting
> the paging signal? Or is it just being "captured" through the air?
> The facility I work for experiences the same interference on CH 19,
> the cable company claims that it is being caused by a nearby airport
> and it is not the cable company's problem. Who would I have to contact
> to take care of this problem??

As I said, the FCC doesn't care about signals leaking into the cable system, HOWEVER, there ain't so such thing as a one-way leak -- if the paging signal is leaking into the cable system then the cable signal is also leading out -- and the FCC is very interested in that because the fines can run several thousand dollars a day for a cable system with excessive leakage - even if the leakage is a customer's fault instead of the company's fault.

So, once again, the cable company is at the bottom of the food chain and is responsible for fixing problems caused by customers and by slimeball paging companies.

Hello. I'm interested in getting a used base scanner. I would prefer tradeing for one, but will consider buying one. I'm mainly interested in RS and Uniden models, but will consider others. If you have one for sale please e-mail with condition, frequency coverage and features, what it comes with (manual, original box, etc), and what you want for it. Here's mainly what I'm looking for:

-Good frequency coverage (let me know specifics)
-Cellular coverage would be a big plus
-A VFO tuning knob (not a must, but a big plus)
-Data skip feature would be a plus
-Delay, manual, scan and search, lockout, and delay features
-Has to be a base scanner
-200 or more memory channels (preferably 500 or more)
-Truck tracking would be a big plus
-Turbo search would be a big plus

Let me know!

In a word Yes :-)

There were a couple of GRE models that RS sold under the "Netset" Badge,
don't know why they choose it.

PRO-2032, PRO-44 & PRO-46 were the three I can recall.

All the best

Jack,

Other than #phlscanner there are several other IRC channels related to
scanning on the UltraNet IRC network. Most of these are active on a
daily basis, normally evenings:

#monitor
#airband
#ukscanner
#milscan

#monitor is probably the most active for stateside scanning and HF
utility listening. #ukscanner is very interesting and it is of course
geared to scanning in the UK. #airband is for aircraft monitoring and
#milscan is for military monitoring.

BTW, I couse the UltraNet for #phlscanner because of the other quality
channels related to scanning already there. And I find that the lag is
very low on this network!

Bob,
The PRO-90 is made for Radio Shack by Uniden and is a
copy of their BC235XLT which has gotten very favorable
reviews. I have posted some of my own thoughts on it at
the following web page :

http://www.qsl.net/n2mca/IMP235.HTM

The BC235XLT comes with two batteries and usually sells
for around $240. The PRO-90 comes with only one battery
and sells for $300 unless it is on sale for $250.
For more help in picking a first-time scanner/receiver,
see the following web pages for help :

http://www.qsl.net/n2mca/PICKRECV.HTM
http://www.qsl.net/n2mca/STARTING.HTM

You might also want to take a look around the two web
pages listed in my signature. Good luck with your decision
and feel free to e-mail me if I can be of assistance!

Get the latitude and longitude of where you want to search. An airport facilities book or some good map should have this. Then search by Lat/Lon. Pick a mile or so for the radius and search away! It will give you the user, callsign, type, and frequency all on ONE PAGE!!! No hunting around all over the place just to get the freq. And if you want the deeper info like licensee name or location you can still click away.

Another fun thing to do is get the lat/lon for a nearby mountain top repeater range. A good way top do this is hunt the locations until you find one on a mountain. Then check the lat/lon for that frequency. Search by that lat/lon and make it a point search. Don't put a radius in. You'll get EVRYTHING on that mountaintop!

Is the PRO-90's frequency coverage IDENTICAL to the BC235XLT?

The BC235XLT covers:

29 - 54 (5 kHz steps)
108 - 137 (AM, 12.5 kHz steps)
137 - 174 (5 kHz steps)
406 - 512 (12.5 kHz steps)
806 -823.9875, 849.0125 - 868.9875, 894.0125 - 956 (12.5 kHz steps)

I don't have detailed specs for the PRO-90.

Oddly, the Radio Shack scanners made for them by Uniden usually
censor frequencies adjacent to the cell phone bands (e.g., 823.9625)
but their Bearcat cousins cover them.

The censored frequencies are used by the Illinois State Police
EDACS trunked system, as well as by other agencies in New Jersey,
California, etc.

> or something?
>
> Any info appreciated.

NOPD can still be found in the 800Mhz region. Unfortunately, NOFD, E.M.S., City Hall, and just about all of New Orleans city government, the JPSO, and a slew of other services...ship chandlers, air conditioner technicians, cable TV repair people, plumbers, State Police, and a host of others inhabit the same spectrum, and it is impossible to filter them out, even with 'Trunk Tracker' radio receivers.

NOPD uses the General Electric system, which is immune to the 'Trunk Tracker' radios on the market.

UHF radio can still be used to monitor Gretna Police, Kenner Police, Westwego Police, the J.P.S.O. District units, St. Bernard Parish Sheriff, most of the Orleans Parish Criminal and Civil Sheriff's Office traffic, the Crescent City Connection Police, the Causeway Police, and local University Police Departments.

The Orleans Levee District Police Department was the first local law enforcement entity to go to 800 MHz trunked radios, and is still the only one utilizing AVL technology in the New Orlean metro area. AVL ('Automated Vehicle Locater') shows the precise location of all the police vehicles in a given area (provided they are fitted with the requisite equipment).

Gretna Police use 'ANI' on their radios...'automated number identification'; each time a user operates his transmitter, his ID number shows up on a screen in the Communications center.

In the NOPD radios, this is also used...they call it your 'LID'. Every time you operate your transmitter, EVERYONE out there sees who is talking...your LID (usually your badge number) shows up on the radio's LCD display. Really cuts the foul language and weird noises to a minimum...

Some of the Federal outfits still utilize VHF hi-band radio...ATF, for instance, uses 165.2875 MHz a lot. You should listen to them...they almost sound like real cops.

Billy Tauzin is trying to ram some new legislation through that would make listening to most radio traffic a crime, BTW.

Have 3 scanners with full cell ranges for sale or trade:

AOR 2500 c/w Samsung 486 SX notebook with Scancat and AOR software
computer and scanner - $750 US or trade for motorola Sabre 3 VHF.
Optoelectronics R10 test receiver (pocket sized locks on closest cell)
- 250 US
Uniden MR8100 with computer software
- 250 US

Programming trunked systems is simple. Simply hold the "trunk" button
until you hear a beep. Then pick a bank to program (1 thru 10). Enter
in the 800Mhz trunked frequencies as normal. Once all are entered,
press "trunk" again. All done. To search for talk groups, make sure
you're in trunk mode then press "search". Once it locks up on a talk
group, you may press "enter" to place that talk group into the scan list
(pretty much like a conventional scanner). Good luck.......

I have a 2004 (earlier model of the 2006) that's been on constantly
since I bought it about ten years ago. It still works fine, except
for the dim display problem that all these radios have.

>Also it still has the cellular blocked, is there a chance that the

I doubt you are capable of such honesty. But, in case you forgot (we all know you have such a limited attention span), the information you so *desperately* want is for sale. Remember the terms, Toilet Boy? Here they are again:

I have the information you desperately want. If you didn't want this information so desperately, you wouldn't have pissed, moaned, cried, and whined so much about it the last two years. I will not GIVE you the information, but I will SELL it to you. The price and terms are NOT negotiable. You must do exactly what I want and in the order shown. This is the price:

Step 1: Post to the two scanner newsgroups the name of the school(s) you claim your degree(s) are from AND the date(s) the degree(s) were conferred.
Step 2: Wait for others to verify and post said verification to the newsgroups.

After you comply with Step 1 and 2, I will post the information you want. Remember, this is not a negotiation. If you want the information, pay the price.

2267. PRO-26 $199.97!

Newsgroup: rec.radio.scanner
Date: 1998-01-19 00:00:00 UTC
From: Bill Crocker <billc@rust.net>
Message-ID: <6a0r48kpr1@news4.ispnews.com>
Source record: 173224

Thanks to Bryan Doherty's tip, in a previous message... I checked my local Radio Shack stores and found some inventory on the PRO-26 that's on close-out for only: $199.97. As Bryan pointed out, this used to sell for $459.95! It's an excellent bargain at $199.97!

For those of you in the Warren, Michigan area, there was one left at the Radio Shack store, located in the Universal Mall; 810-751-5363.

Bill Crocker

Use depends on if one of the channels has been assigned to local agencies.
Western PA is primarily 460.475

Pennsylvania State Police Liquor Control Board Detail>

158.7600R/156.0150 151.4 F-1 (Phone Patch Capable)
158.7600R/156.0150 123.0 F-2 (No Phone Patch)
453.1375R/458.1375 Harrisburg
45.3000 Simplex Portables (Old System)

Pennsylvania Emergency Management Agency (PEMA)

PEMA uses 5 channels:
453.525/458.525 Main Repeater
453.350/458.350 Mobile Repeater
453.525 Simplex
453.350 Simplex
158.835 VHF
45.300 (Old System)
PEMA uses DIFFERING CTCSS (PL) tones for various counties main
repeater as follows:

Allegheny Co. 210.7
Armstrong Co. 103.5
Carbon Co. 136.5
Clearfield Co. 179.9
Fayette Co. 118.8
Indiana Co. 136.5
Lawrence Co. 156.7
Washington Co. 156.7
Schuylkill Co. 210.7 rpt. tx 179.9 Input
Somerset Co. 136.5

PL is NOT used on 453.350 the mobile repeater or simplex.

169.500 PEMA Rain Gauges
170.275 PEMA Rain Gauges
171.025 PEMA Rain Gauges
171.085 PEMA Rain Gauges

Rain Gauges are scattered throughout the state, and transmit
data on the above
frequency back to the local EMA office. At that point it's
collected on a
computer using IFLOWS software, and relayed to PEMA HQ in HBG via
Ku band VSAT

satellite system.

PEMA also utilizes the Ku band satellite system known as SEVAN
to send
messages to local EMA offices regarding events around the state,
and weather
information from the NOAA Weather Wire.

SEVAN also provides for a voice channel to all EMA agencies,
and a video
channel from PEMA HQ.

>yesterday. That was my last and final posting on this subject. Let it

No it wasn't. I doubt that this one was, either.

>drop. Why continue with it?
>Also what do you call yourself doing by low rateing Web TV users? They

Because in a significant number of cases, they deserve it. They get a new toy for Xmas, hook it up, and jump headfirst into a newsgroup with inadequate tools and no clue as to tradition, etiquette, and common practice. Yes, some WebTVers are good, responsible users, but they're getting tarred by the idiots, just as AOL users were earlier, and for many of the same reasons.

>are people the same as everyone else. They just did not have to spend
>several thousand dollars to access the web as some people have done.

Nonsense. You can buy a brand new computer (including a monitor and printer, which you don't get with your toy) with all you need to access the net, play games, do bookkeeping, word processing, and dozens of other things you can't do with WebTV, for under a thousand dollars,

For the cost of WebTV and a TV set, you can buy a used computer that will blow away your toy WebTV.

Message-ID: <01bd248f$7ededd20$7061c697@vucqpqlj>
Source record: 173238

What is a good software program to control the BC895XLT? I have tried Scancat Gold for Windows and have not been able to get the program to control the scanner while scanning a file. I am able to scan ranges, so I know the radio is connected correctly.

I also downloaded an evaluation copy of RadioMax. This program works, but has fewer features. I also don't like the fact that only one frequency is visible at a time.

What I am looking for is a program with a flexible file manager that allows you to view and work on multiple frequencies. Also, it would be nice to be able to upload PL tones. This is a feature I have yet to see.

Am I being too critical? Please let me know...Thanks. 73 es CUL

Hello Gang!

I'm selling a Radio Shack PRO-27 VHF/UHF handheld scanner.
It has 20 channels keypad programable in the box with book.
It covers 29-54, 137-174, 406-512 MHz.

Also have the Service Manual from Radio Shack for it.

$50.00 gets it!
Make an offer if you really want it!

Pete

Source record: 173241

I have had this set for two years.

It is really good apart from one glitch.

The delay feature just will not work on my set, it stops on about
2% of the memory locations. It is really next to useless.

I have tried all variations to cure it, but to no avail.

Has any else had this and cured it.

I have had 6 resets, 2 were when the battery went flat while
scanning and it reset everything, an annoying trait.

The others were to change a war torn case and 3 were when the centre
pin broke on the DC jack. Opening the case resets all as well.

Blake Bowers wrote:

> Actually John, I asked for your credentials back when you first asked
> Bill for his. I even suggested that we both forward copies of both of
> our credentials to a third party for verification. You never agreed.

No actually, I agreed to using Chris in Texas & told you to set it
up if it was that important to you. You didn't do it. You wanted you
use Bobbie, which I would NOT agree to her.

But to truly bring FULL reality to this, yes I did ask Bill Cheek for
his
credentials nearly 2 years ago at the same time that *MANY* also did the
same on this NG. After consistantly & repeatedly asking for Bill's
credentials & getting NOTHING in response, you & Bill then asked for
mine. At that point I offered a deal, Bill would honor the (several
months old) request to present his credentials, & then I would give
mine. No action was ever taked by Bill on this issue.

(If you would like to see some posts from those times to refresh your
memory just let me know)

And that is still where it sits today. If Bill will present
schools, cities, accreditating/licensing bodies, & dates then I will
hold
up MY end.

> Lets at least stick to the facts. I have no desire to get into the
> mudslinging that goes on between you and Bill, but would like

From: mulligan@ACM.ORG
Message-ID: <69ve3a$nef@hopper.ACM.ORG>
Source record: 173263

2006_1111@ridgecrest.ca.us (GW) asked:
> ... if an RS Pro 43 with a date code of "5A4" is cell modifiable?

Radio Shack items have a date code in the form 'mmAy', where 'mm' is the month and 'y' is the year (the 'A' stands for A & A Trading, Tandy's import arm). 5A4 or greater indicates an import date after the cellular cutoff.

Radio Shack radios have an FCC ID of the form AAOnnn-nnnn, where AAO is the FCC Grantee Code for A & A Trading and nnn-nnnn is normally the catalogue number of the item. PRO-43 scanners with an "A" at the end of the FCC ID (AAO20-300A) are not modifiable. This does not necessarily apply to any other model.

Unmodifiable PRO-43s have an "A" preceding the serial number. This also does not necessarily apply to any other model.

This posting was brought to you by the letter A.

Hi
I currently own a Trunk Tracker 235 Bearcat. I have owned scanners for years
but
have never had a problem until now trying to program it. Everything is fine
until
I try to program the 2 agencies in our area that are trunked . I have the
frequencies
but I am looking for someone to coach me through this on the phone. If you emai
me I will be happy to give you my 800 phone number so maybe you can coach
me through. No one in my area seems to know much about this scanner in
reference to programming. Many thanks I hope someone can guide me or
coach me on the landline so I can start enjoying my new scanner. Thanks
alot in advance Stoli 126@aol.com

These frequencys are the common output frequencys of DBS LNA/LNBs.
The receivers input these frequencys and output on TV channles 3 or 4.
OK, here's what you can do to 'scan' these freqs.
Get a home TV Sat. receiver of the old non decoder type or even one of
the newer ones will work to some extent. I use an old STS brand which I
picked up at a yard sell for 5.00 USD. It was used on a C-band setup,
and when the transponders on C-band started to get scrambled the owner
had to buy a receiver with decode capablities. So he stopped using the
old box.
Here comes the hook-up. Connect the OUTPUT of the Sat. receiver to your
regular scanner, set your scanner to the TV channel (either 3 or 4) that
the Sat. receivers output is set to.
Connect the Sat. receivers input terminal to a non shorted scanner ant.
The use of 75 ohm coax is ok for all connections.
You may note that the Sat. receivers input port has a DC voltage present
on it 12 to 18 volts this was used to tune the LNB at the dish. That's
the reason to use a non-shorted antenna. Of course you can put a
blocking capacitor in series with the antenna feed lines center
conductor to isolate the DC. .001ufd should work fine.
Now tune the Sat. receiver by what ever means you have. These receivers
are set up to go from transponder to transponder. 1,3,5,7,.....and
2,4,6,8,..... so they have a gap between channels. The one I have has
electronic fine tuning. So I can set it on a transponder, set my scanner
to search across the 6 MHZ output TV channel and fiddle with the Sat.
reveivers fine tune. This normaly will result in alot of time wasted.
But what the hell. I'm retired. And once I get all th chores done.
I got a lot of time to play. By the way this same method can be used to
scan other frequencys by using a UHF tuner out of an old, old TV.
That's another boring story.

I'm all for stopping free speech in this country. As well as freedom of thought. The sooner this country becomes a one party country (the republician party) the sooner we can get rid of that dammed Constitution and those dammed Bill of Rights the better. I say a vote for th LUSH, LUSH LIMBO for prez. That way we will not have to think, it will be done for us.

For those who don't understand what this is all about, this post is by someone associated with an insurance company, independent claims adjuster, or a legal department thereof. They are looking for people to monitor their scanners for fire calls and then report the information to their company. This is blatantly illegal (divulging information that you hear) and is one of the reasons our scanning rights are very much in jeopardy today.

>hello I just bought a used pro-34 scanner an dont have a manual >I would like to
>know how to enter new freg.and when I scan and find a freg. how >do I stop it

1. how to program in a frequency

First you'll find you have 10 banks
(A bank is a range of 20 channels eg Bank 1 is channel 1 to 20 Bank 2 is 21 - 40 and so on)

Choose your channel you wish to use eg channel 1 , press 1 on your keypad, then press the PGM button. you are now ready to input your frequency. A hint is to program specific freqs from a servicice into different banks, eg bank 1 police, bank 2 fire, bank 3 ambulance and so on.

for example 468.725 would be (enter 468 decimal 725 and hit the enter key.

This frequency is now stored at location 1 in bank 1

continue this till you have no more to enter

2. To scan your favourites, turn off the banks you dont want to listen to eg you want to listen to the police only, in scan mode press the 2 ,3,4,5,6,7,8,9,0 buttons to turn off the banks and only scan bank 1 which has police in it.

if your scanning and want to listen to one frequency in that bank , hit the ,manual button when you hear the freq you want. it will stop on that freq. if for example you want to hear that freq when it comes up , but dont want to miss out on other action you can program this channel as a PRIORTY channel, by going into program mode then pressing in the number the freq is on eg channel 1, and then pressing PRI .
now if you hit the scan button and hit the PRI button, your scanner will check for that channel at a 2 sec interval whilst you are scanning. If it hears activity , that channel becomes the priorty and goes to that channel.

If you want to scan for a freq eg in a range between 400.000 MHz to 430.000 MHZ do the following:

Make sure your in program mode

goto a blank channel, i usually keep bank 10 free for this.

Eg channel 181. then press the limit key. you'll see LO displayed in the LCD type in your low freq eg our example is 400.000 MHz then hit enter.
nownow hit the limit key again and it takes you to the highest range in your search, for our example we will type in 430.000 MHz and hit enter

now just hit the up arrow and your searching!

if you hear a freq you would like to listen to hit the monitor button this will freeze the search for you and also enter that number in a standby monitor bank , you can see the MON display on your LCD the flashing block relates to the monitor memory number your tempory freq is stored in. If you want to store this freq in one of your perm channels. do the following:

hit the PGM button , this will bring you back to the selcted channel you chose beofre doing your search , eg channel 181

it will also put the freq in this channel for you, so just hit enter. And your done

If you need any other help I have other varied knowledge of this unit.

I use it for reporting stories and other info to the local media, as i am a freelance reporter. This scanncer has seen many years And if it could talk , im sure the unit would have a few stroies to tell of it own.

Great purchase.. you'll enjoy it..

I don't think he is implying that the cable company is transmiting
the paging signal. The cable system is supposed to be closed system. If a
paging transmitter signal is leaking into the cable, then it is likly that
the cable system is also leaking out. Since cable channels above 13 use
frequencies assigned to other services, the cable system could be
interfering with police, fire, aircraft, etc. The FCC can shut down cable
systems for excessive leakage.

I have an AR-8000 and am not very pleased with the sound. The scanner seems to 'cut-out' on most frequencies, especially the 800's. Once it stops on a frequency, I can turn the squelch down low and it sounds okay. I have read about the 'audio-clipping' for 800 Mhz frequencies and I assume this is what is meant by audio-clipping. Do all 8000 users have this problem? Will the mod help all frequencies?

Also, is there a speed mod available for this scanner. I have searched and have not turned up anything. I am beginning to wish I still had my Pro-26.

Any advice would be greatly appreciated.

Thanks
Todd

Following receiver/ scanners are for sale:

AOR AR-8000 "the scanner"...nuff said. Handheld receives almost
everything from DC to Daylight. Purchased 11/97 in Hong Kong, with receipt,
box, all accessories, and 120V charger/power supply. Full coverage 0.5 Mhz thru
1.9 Ghz.
$475+COD/Shipping charges. a true 10 out of 10. Found an AR-3000.

Radio Shack Realistic PRO-46 hand held scanner. Older date code. Full 806-960
coverage (no gaps) ! No manual, 7 out of 10 cosmetics (a few
scratches here and there, nothing serious though), works 100%. 100 channels,
aircraft rx, cell, search, priority, etc.
$145 + COD/shipping charges.

Radio Shack Realistic PRO-62. Cellular blocked, 200 channel, AM/FM,
triple conversion, hyperscan, handheld scanner with box, manual,
etc. Used only about 4 hours - 10 out of 10. Intermod resistant!
$125 + COD/Shipping charges.

email if interested, and thanks.
Joe

I have occasionally been able to receive both sides of a cell conversation
here in Nashville. In certain areas (farther out in Franklin), I get both
sides around 865 Mhz. For the most part, however,I receive single sided. I
think that is just how it is done in this area. I was recently in
Gatlinburg on the mountain, and I was receiving all sorts of double sided
conversations all accross the 870-905 Mhz range.

2339. Decoding Software For Windows95

Yea, right. Like suggesting people use a metallic tuning tool to
adjust the slug in a oscillator, that is really someone who knows what
he's talking about, NOT!

> scanner - any scanner for that matter. Sorry John Mackey and company, but it
> is my humble and honest opinion that Bill Cheek has more scanning knowledge
> in his pinky finger than you will ever have in your whole life.

So I guess you have demonstrated waht your humble opinion is worth.

> Bill is simply treating people the way that they treat him - he has even

NO, Bill often takes after people for his own little enjoyment. How do
you
explain his behavior on Fidonet, his accusations of mental illness to
others,
his accusations of other issues to other. He like to start trouble then
appear as the helpless victim & take in the fools who will believe him
like YOU.

Purely from an informational point of view, of course, I fail to understand
any reason why the cell user can hear it and a radio monitor cannot. What
is different about what you receive and what they receive? Seems to me
they are both just radios sniffing the air, and if one can get it, why
can't the other?

I agree.I've had my 2006 ever since it was made available by RS.Has
NEVER failed to operate at 110%.

As noted,my only "problem" is the fading lcd display.

Fwiw,my 2006 has the "dim/bright display switch",no on/off option.

A few years ago I did the "scan speed & cell" mods.If anyone has the
chance to buy a 2006 @ $250.00usd they won't be disappointed.

That is correct. They have added a couple of modifications so it isn't exactly the same, but I haven't found any major ones.

2349. BBS (web-based) for Scannists

Newsgroup: rec.radio.scanner
Date: 1998-01-20 00:00:00 UTC
From: D Stark <nf2g@ggw.org>
Message-ID: <6a2qo9$2962$1@node17.cwnet.frontiernet.net>
Source record: 173047

The NF2G Scannist Pages is the site of a new, improved web-based BBS for scanner hobbyists in and around New York State and Ontario Province. The website itself is being rebuilt in an improved format, with more detailed frequency listings, unit numbers, codes, etc. where available. So far, the International, Canada Nationwide, USA Nationwide, New York statewide, Ontario and Quebec provincewide, and several NY county listings are complete and online. At least one new county should appear just about every day.

The main website is at http://www.ggw.org/nf2g/

(If you've bookmarked any lower level pages from the old website, or specified "index.shtml" as the top page, your links may now be broken. Since the new site is framed, you can only bookmark the places where a new frameset is built. This generally means that you can bookmark anything that's directly accessible from the index page. Bookmarking sub-pages will give unpredictable results and is not recommended.)

The NF2G Scannist BBS can be reached from the main web page, or by typing in this EXACT location:

http://www.ggw.org:8080/~6/

You must use the entire URL, including the "http" protocol and the "8080" port number, or you will get an "invalid protocol" error.

When you dial pacifier.com directly, how do you explain that you cannot access
their news server? Didn't you even go so far to admit you've used them in the
past (which we all know means NOW).

Nice try, liar.

2370. Re: Radio Shack Pro-90

Newsgroup: rec.radio.scanner
Date: 1998-01-20 00:00:00 UTC
From: Rich Wells <wellsr@ibm.net>
Message-ID: <885307181.1793589261@dejanews.com>
Source record: 173068

Using Tandy's on-line scanner specs, I looked up the PRO-90 and
found the following

Frequency Coverage: ..... 29-54 MHz (in 5 kHz steps
108-136.9875 MHz (in 12.5 kHz steps)
137-174 MHz (in 5 kHz steps)
406-512 MHz (in 12.5 kHz steps)
808.0000-823.9875 MHz (in 12.5 kHz steps)
849.0125-868.9875 MHz (in 12.5 kHz steps)
894.0125-956.0000 MHz (in 12.5 kHz steps)

So it appears the PRO-90 does have the same coverage as the BC235XLT.

Strong Signals,

Message-ID: <19980120204201.PAA04454@ladder02.news.aol.com>
Source record: 173070

The only difference between the Pro-90 and the 235XLT is the name stenciled on the front - plus the fact that Uniden includes a second battery pack and a charging cradle and RadioShack does not. Since both radios can be purchased for $250.00 I can't understand why anyone would buy the RadioShack version without the extra battery.

>Will the mod help all frequencies?

This is the audio-clipping problem (and mod) that you hear people talking
about, for sure. I had the change done and it cleaned up 800mhz, big time.
I hear now that there are two different size filters that people have started
using, but I don't remember the specifics.

I thought it was unusable in the 800mhz band until that mod was completed.
Cost about $35 from Scanners Unlimited in San Carlos, California.

Offical Greyhound policy prohibits thier drivers from using any form of electronic device while they are driving. That means that they don't have an official frequency. Now this doesn't mean that that bus running down the road MIGHT not have a CB running, some of the drivers do use them.

<< Pro Data >> Version 1.6 for Windows 95

The most sophisticated and powerful Frequency Database Manager ever developed.

The problem I had with my ISP with the "Connection reset by the server" has
been resolved with the program file moved to another server.

Please visit our web site at http://home1.gte.net/prodata1/index.htm
and view the screen shots before downloading the 30 day demo.

Summary of Features:

26 fields of information
Order of fields is customizable
Grid view window for easy display.
Record view window for easy data entry.
Import from Percon, Probe ScanWare, APF, and UFDBF database files.
Export to APF, and UFDBF database text files.
Querys the database returning records meeting user criteria with unlimited
possibilities.
Find and Replace data in any field.
Several types of code viewable/editable windows
Change the capitalization of data in any field
Reports - Prints to a file or printer the opened database or query.

I have what you want Toilet Boy, pay up or shut up. You won't accept the challenge to prove your credentials, because you have none to back up your lies with. There is a stalemate because you are a fraud.

> RIGHT!! We have been waiting 2 years as you state, & now you come in
> & expect to get everything without having to give anything!!! Sorry,
> it don't work that way, son!

WRONG! YOU have been waiting two years. I have the information, have had it for a year now. If you want the information, pay the price, smegma breath.

> Mr Kendrick-
> After you comply with Steps I have mentioned previously, I will post
> the information you want. Remember, this is not a negotiation. If
> you want the information, pay the price. Certainly you are smart
> enough to understand this simple concept.

Nice try, cottage cheese brain. Try all the elliptical logic you want Toilet Boy, you're still very lame and transparent. You don't have the degrees you claim, and are using ANY excuse you can find just so you won't have to back up your claims.

2390. FS: RS PRO-2026 SCANNER - $150 SHIPPED

Newsgroup: rec.radio.scanner
Date: 1998-01-20 00:00:00 UTC
From: Nat Heatwole <heatwole@shell.clark.net>
Message-ID: <6a3c3g$rep@clarknet.clark.net>
Source record: 173088

I have a RS PRO-2026 mobile/base scanner for sale. It's looks are 8/10. The price is $150 shipped. I would prefer to sell but trades for SW radios, Ham gear, antennas, meters, frequency counters, base scanners, and radio accessories are considered. Please e-mail if interested. Here's the full list of features for the scanner:

FEATURES: volume, squelch, scan and search, 100 memory channels (5 banks 20/bank), manual, 1 monitor channel, lock out, delay, 1 priority channel, built in speaker, 1 touch weather, air, fire, marine and police bands

ACCESSORIES INCLUDED: mobile mounting bracket, owners manual, original box, home stand, and power cords

FREQUENCY COVERAGE: 29-54, 108-136.975, 137-174, 406-512, 806-956 MHz (minus cellular)
I have heard that the 2026 can be modified for FULL cellular coverage and that their might be a keypad trick for it also

I have the very same radio and in the same cond, but no box.
If you sell that and find a buyer and someone else wants it, pass them
my way.
I'll let mine go for $210.00
Thanks!

I think that his point is the same that many have been trying to make. You simply cannot sell USED, I don't care if it is "mint", equipment for anywhere close to new prices. Scanners, as well as most retail items, are similar to cars. They depreciate the minute they leave the showroom.

By the way, when I checked with Bandercom, the Yupi was on special with the nicads, adapter, and shipping for $499. So now you are left with a used radio plus case (desirable item) and telescoping antenna (not desired by most users) at NEW price. To sell a used item you have to undercut the new cost of the item, usually by a large amount. Otherwise, most consumers will prefer to take comfort in buying a new item.

So, what is YOUR point?!

I've been thinking about this: How 'bout using the dremmel tool with the small circular cutting disk and hold a vacuum cleaner with the automotive upholstery attachment close to the epoxy blob while you lay into it gently with the cutting disk. If you cut the just down to the lead and don't go through the board, it might work. The vaccuum cleaner should pick up any debris and prevent it from contaminating or shorting out other circuits.

Yes, there's a great deal of simularities between the tone and grammatical/spelling errors of Mackey's and Radio Fan!'s posts; in fact, the only difference I can detect is the use of the CAPS key.

As far as writing goes, we all progress to a certain point. Some of our shortcomings we can overcome, some we have to live with. It varies from person to person. Spelling constantly plagues me, I've looked up the spelling of carbureator more times than I can count, and I still couldn't spell it if my life depended on it. (I'm sure I botched here too.)

However, a person with poor grammatical skills and lapses of proper syntax and/or spelling leave a greater "fingerprint" on every piece of writing they produce. It's not visible to the deficient writers because their lack of education causes the errors to appear transparent. As far as they're concerned, it's a perfect piece of work; a matter of perspective. It's not an exact science, but a proper analysis by qualified professionals (Not me, by a long shot, mind you.) could be considered expert testimony in a court of law.

> can't the other?

Actually, you ARE getting the same signal the cellular phones are
getting. The cellular phones are receiving a signal that has ONLY the
other side of the conversation. Basically, that's all you need. The
tower doesn't send back the other side of the conversation because that
cell phone is ORIGINATING that part of the conversation, and sending it
to the tower on a separate channel... so why send it back?

Some cellular carriers do in fact, send both sides of the conversation on
the forward channel (the channel sent out by the tower). But in a purely
technical sense, there's no need for it. It's often done either because
that's the way their PBX switch operates (most wireline telephones have
both sides of the conversation sent to the earpiece), or for ergonomic
reasons (people tend to be more comfortable hearing themselves in the
earpiece, because then they know just how loudly they need to speak to be
heard).

> >
> > Assuming you are tuned to the correct (tower) frequencies, it's probably

Well, there are two frequencies listed for Greyhound Lines, Inc., but
they're listed as being in use only for mobile radios in Houston and
Dallas, TX. SInce Greyhound is headquarted in Dallas, so I'm assuming
those radios are for internal operations, and not for bus communication.

Anyway, if interested, the frequencies are 463.5625 MHz for Houston, and
464.0875 MHz for Dallas.

I have the trunked frequencies for Middlesex County, but they use a GE EDACS system, which isn't compatible with TrunkTrackers. Doesn't seem to be much activity on the system though except for transit operations. Seems like all the law enforcement agencies are still on VHF or UHF conventional channels.

If you still want the frequencies, e-mail me and I'll post them.

2408. John Mackey's Obituary

Newsgroup: rec.radio.scanner
Date: 1998-01-20 00:00:00 UTC
From: Richard Kendrick <wa7twi@primenet.com>
Message-ID: <34C5832E.AF72B9CA@primenet.com>
Source record: 173106
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Infamous Internet stalker John Mackey was found dead at his dingy studio apartment in Portland, Oregon last night. Known for his relentless pursuit and harassment of technical author Bill Cheek, Mackey was found electrocuted in his bath tub. The coroner has determined that Mackey was indulging himself with an AC operated sexual appliance when the device malfunctioned, killing him in the process. Also found in the bathroom by the coroner was a VCR playing a Richard Simmons workout video.

Long considered hapless, incompetent, and inept, his death came as no surprise by those who knew him. Devoutly claiming to have held a Masters Degree in Communication Technology, Mackey could never provide credible proof when he was challenged to do so. After repeated displays of technical incompetence and blowing up numerous power supplies through idiotic interconnections, no one believed he had really earned the degrees he claimed.

After years of abusing Prozac, K-Y Jelly, cough medicines, and Preparation H, his behavior became increasingly erratic. He began to publicly proclaim his love for fitness guru Richard Simmons and boasted of patronizing child prostitutes. Shortly before his death, Mackey was seen performing billy goat gonad transplants as gland cures for the spermatically challenged and often went door-to-door collecting for static cling. Considering it his civic duty, he diligently tried to answer all his "occupant" letters.

Once known as King Mackey the Great, Ruler of Torpor, Supreme Grand Master Fool of the Universe, Grand Master of the Number Two Phillips Blade, holder of the Diddler of the Spark, High Priest of the sect of Fraud and Liar, and Orational Master of Turpitude, Innuendo, and Obscenity, he fell into disrepute in his later years, simply being known as a pitiful liar.

Before his death, he was active in the amateur radio group, Phony Amateur Radio Goon-balls. Having no relatives or friends who would claim Mackey's body, the coroner's office will cremate the remains in accordance with public law regarding the death of indigents. The ashes will be recycled into asphalt to be used in new public works projects. There will be no ceremony or public viewing.

I have big radio, it is scanner model. As I sat in auto, radio was working, and USA police watch me. I had only one radio, and they ask me what I was doing on the street. I told them listening to radio. They ask me to get out of cars. I was put on ground, and radio was taken into pilice custody. I only heard them try to arrest guy in house. I was in driveway of house, and they found me. I told them I could not leave because police car block driveway. so I sat in driveway and listened. They arrested me and took my radio. I got a ticket that says

Citation for criminal obstruction of peace officer activities.

I want my radio back. I cannot afford lowyer.
I owe 2000 dollar ticket for payment of fine in case.
Can i do anything? I am a powerful man in my country.

Source record: 173109

Cellular sites don't NEED to repeat out the mobile (input freq) signal, since it's headed for the party on landline; but they DO need to transmit from the landline out to the cell phone. Though many do function as "repeaters" it's not really necessary at all.

From: Bubba DeBubb <bubbadebub@hillbilly.net>
Message-ID: <34C59ABC.2B82E685@hillbilly.net>
Source record: 173110

You guys should all give Mr. Bill Cheek some respect. He is more knowledgeable
than anyone that has ever worked with scanners, and he is extremely smart!
Please do not piss off Mr. Cheek so that he leaves this group. We need his
experience and knowledge. He has written many books and has forgotten more
about scanners than any of us will ever know. He figured out how to modify
all of the scanners, and wrote books to tell us how to do it. Without Mr. Cheek,
we would not have modified scanners!
I nominate Mr. Bill Cheek for moderator the the rec.radio.scanner newsgroup.

I would also like to say "Thankyou, Mr. Cheek for all that you have done to
advance the scanner hobby"

So let's all give Mr. Cheek the respect that he deserves.

Bubba DeBubb

Hey Steve, why is it that whenever someone ask a innocent question or tries to offer some sort of assistance to someone with a query, that doesn't fit some kind of format, that person is subjected to a personal assault?
Maybe the reason why I don't post my Email address is because this is what I learned from observing other newsgroup postings in order to avoid spam. I did not purposely violate "the sacred code" of newsgroup postings. This is the first time that I did such a " heinous " act. Maybe it wasn't the correct thing to do, but guess what? You (no matter how much you think you know) and I, learn something different every time we sit down and spend some time in front of these machines. I just learned that ther are some Do's and Don'ts that vary from newsgroup to newsgroup. This does not make me or anyone else who dares to tread on " the sacred code " a "bozo", it just may mean that we are just inexperienced. Hence, your reply just might incite a flame war had it been someone else. How does that help the group?
You see Steve, it could have been different. You obviously realized that my intent was only to help someone. So, instead of insults you could have replied something like this:

"Hey Dan, I see you were trying to "help" someone with a question. That was nice of you. I have a few concerns though that might help you and the group. There are certain things "Do's and Dont's" that happen on newsgroups. The binary issue, the email issue are my concerns here.

So we don't waste time on the group here's my Email address."

Do you see the difference Steve? You would help me and anyone else who was doing the same thing to avoid it in the future. Such a simple act of kindness, politeness would help enrich en the group(s)

I'm not going to post my Email address just yet Steve. I'm not sure what I can expect from you or anyone else,and I don't need to be harassed via Email. I'm an American citizen and have certain expectations when it comes to my privacy. You rest assure though that I won't post binaries anymore. I wouldn't want to violate "the sacred code"

Dan T.

2420. FS - Quality Scanners/SW radios (Icom,Sony,Drake,Standard,Yaesu)

**********MINT Unblocked receivers and scanners**********

I've collected too many radios over the years and need to clean out my radio room to make space for new toys; I am not a dealer.
I purchase radios to try them out for the experience, and later sell them to try and recovery most of my money. All of these radios have been sitting in my closet because I've recently returned from a European vacation with new toys!!!

Every radio is in truely MINT (10+) condition, with original manuals/accessories unless otherwise noted; some even w/service manuals. All prices reflect the condition and care in which the radios have been maintained. Prices are somewhat firm but I have an open mind and I'm always willing to listen to reasonable offers.
Prices do not include shipping. Serious inquiries only please.
Package offers welcomed!

AOR-3000a UNBLOCKED - $850

Drake R-7 receiver with NB-7 and all filters installed. - $700
(Original service manual and after-market box also included. Its a 9.5 on a scale of 10.)

Icom R-7000 UNBLOCKED - $1250
(Comes with an unused TV-7000 adapter and CT-17 interface still wrapped in plastic; sorry, never got the software for it.)

Icom R-7100 UNBLOCKED - $1050
(A 9.5 out of a 10 - original service manual also included, add $100 for brand new CT-17 computer interface)

Icom R-1 Blocked - $225
(Optional Icom extra capacity rechargeable battery included)

Phillips D-2999 SW receiver - $325
(Original service manual also included.)

Sony 2010 - $190
(No box, but everything else - this radio is a 9 out of 10)

Sony 7601 - $125

Sony CRF-1 - $600
(Believe it or not, original service manual also included with this 10+ radio)

Sony Pro-80 - $225
(Optional Sony rechargeable pack and VHF converter included-also an after market carrying case in addition to the Sony case for added protection, no box.) Very stable SSB!

Sony SW-55 - Bargain $75 Everything works - very sensitive
(This radio has a small crack by the telescopic antenna because I recently dropped it - as is, nothing else comes with the radio.)

Standard AX-700 UNBLOCKED receiver w/spectrum display - $575
(Same radio as the Standard CCR-708a)

Yaesu FRG-9600 UNBLOCKED - $500
(Comes with original service manul, and installed TV board)

Wanted - Icom R-9000
Phillips AE-3905 Mini SW radio
Sony WA-8800/A SW radio cassette (1980s vintage)

2421. Update on Uniden BC700A date code for mods !!!

Newsgroup: rec.radio.scanner
Date: 1998-01-20 00:00:00 UTC
From: noobody@aol.com
Message-ID: <19980120020700.VAA16487@ladder02.news.aol.com>
Source record: 173151

This is information for the group as an FYI:

Today I purchased a Uniden Bearcat BC700A scanner from a pawn shop. It had a date code of OBID. (Feb 1994) (The BC700A is like the BC350A but it includes the 806 - 956 MHz band.)
I have seen articles, FAQ documents, and newsgroup discussions about the different date codes when it comes to the ability to modify a scanner to receive cellular.
The information concerning the BC700A shows that a mod could not be done to a unit with a "D" in the date code.
I did the mod this evening on the one with the OBID date code. (Feb 1994)

You might want to update notes you may have been keeping in your scanner files to add this date code as a modifiable one for the BC700A. This may be a fluke but it worked as advertised. One resistor removed and the frequencies appeared.

Happy Scanning

2422. Icom CI-V (C++ coding for Optoscan 456)

Newsgroup: rec.radio.scanner
Date: 1998-01-20 00:00:00 UTC
From: Kevin Fisher <klfisher@compusmart.ab.ca>
Message-ID: <01bd254a$cceaf600$89554bce@default>
Source record: 173152

Sorry if this is a bit off topic,
I am interested if someone can provide information as to how to send data to the com port in C++.
I am attempting to complement some Edacs source ......

Sample portion of code (Sorry if there are mistakes - I'm just learning this):

```
--------------------------------------------------------------------------------
-----------------------------------------------
# include <iostream.h>

void main ( )
{
char cEnd = 'F';

char szInput[20],
szRemote[20] = 'FE FE 80 E0 7F 02 FD', (Will not change)
szPreamble[20] = 'FE FE 80 E0 05 00', (Will not change)
szEnd[2] = 'FD'; (Will not change)

// Send remote string to com port to force remote control of radio

FE FE 80 E0 7F 02 FD

While cEnd == 'F'
{
cout << "Enter frequency in MHz: ";
cin >> szInput;

// Example of input 162.5500

// Convert input string into proper order for below : 00 55 62
01

// Send preamble out com port along with frequency value and end value

FE FE 80 E0 05 00 00 55 62 01 FD // This is full command needed to
tune radio.

cout << "Enter another frequency [y/n]:";

cin >> cEnd;

}

}
return;
```

(I need to convert this to hex ? and send it out the com port. This is to control a computer controlled Pro 2006 radio with Optoscan 456 interface.)

Any help appreciated.

Thanks
Kevin Fisher

The 2005/6 is probably one of the best scanners ever made. At $250.00, either would be a wise purchase. They can both be opened for cellular with little difficulty if so inclined. There were no 2005/6s produced that are permantly blocked.
As mentioned in a previous answer, the most likely problem you will encounter is fading backlight on the lcd display. One note, the 2005 has a dim/bright display switch. The 2006 has an on/off display switch.
For what its worth, Buy now.
Mark

qwertREMOVE@sprint.ca wrote in article
<34c30078.46768670@news.sprint.ca>...
A friend has one he said he would sell me but it has been on for 24 hrs/day for over two years. Is the majority of its life used up now? (sorry if its a stupid question).

Also it still has the cellular blocked, is there a chance that the mods you people talk about won't work on it --cell fix, 1000 channels. (were there 2006 model made that were permanently "crippled" or are all 2006's good scanners).

Someone else has a 2005 for sale for about the same price with the cell mod done. Both model are supposedly in "excellent " shape. Is the 2005 any different?

They're asking ~$250US for each one.

Also theres a Netset/Radio Shack? 2032 for sale for much cheaper than the 200x's , that owner says that it-the 2032- is the same as the 2006's. I am of to dejanews to search on the 2032 but since I may have to act quickly if I want to get any of them, I am asking here first off.

You don't have to e-mail me, you can just answer here if you want because I'm always lurking in here :)

thx

Hello all, anyone have some advice for tapping the discrimantor output for the RS Pro-2042? Have seen some info out there and it seems kinda vauge to me. Not being an electronic expert I am a bit cautious when it comes to surgery on my new "baby". Any advice would be so appreciated. I am planning on adding an Opto 535 board in the future, would this provide me with what I need (which is a jack that I can feed a clean signal to a decoding type software program)? Also does anyone have any exp. with the optolinx unit in conjuntion with some of the POCSAG type decoding/encoding software that is out there? Any suggestions as to what hardware/software set-up would do the trick without spending hundreds of dollars. I have allready tried the Hammcom type interface without much luck. Thanks

Hmmm... I've got interference from a paging company on channel 17 (the paging
frequency being 140.16MHz).

The paging signal is so strong (the transmitter's a block away) I can see it
in the ambient noise with the cable disconnected.

Can the cable company do anything about that or should the S/N ratio with the
cable connected be sufficient to block the paging in the absence of leakage?

Bernie

The "legendary" data interface kit mentioned in the manual (#11996428), consists of a software package and interface cable. Radio Shack's price is $129.99, which is a little on the steep side and they will not sell the cable separately. It is easily constructed and there are directions at several sites on the WWW. Once built, you *connect* it by plugging it into the headphone jack on the front panel of the scanner. No modification to the scanner itself is necessary.

The level of technical skill involved is low and few tools are needed. The cost of parts required is less than $10.

MAN+DATA is a battery indicator. So if you have pressed MAN+DATA, press
any number from 1 to 8. You will see "up" and some curious digits,
"1.75" or "2.50". With the limit or hold key you can change them. In
this mode pressing WX and theen limit or hold key, will change the
display to "LO" and you also can change entries. Wonder whats that for.
I found no key which stores the changed item permanently.
Furthermore in this mode, pressing the MAN-key brings up e.g. "n" "3".
this can also be changed by limit and hold. I have no idea what the
sense of these numbers is..

SCAN+2+9 flushes the memory and puts test frequencies in.
SCAN+2+9 flushes the memory
2+9+L/O is a display test

There sure are more....

Good Luck Hubert

Mark (mtaustin@onr.com) wrote:
: The 2005/6 is probably one of the best scanners ever made. At $250.00,
: either would be a wise purchase. They can both be opened for cellular with
: little difficulty if so inclined. There were no 2005/6s produced that are
: permantly blocked.
: As mentioned in a previous answer, the most likely problem you will
: encounter is fading backlight on the lcd display. One note, the 2005 has a
: dim/bright display switch.
: The 2006 has an on/off display switch.

Not all 2006's had the on/off switch-the early ones, without the "a" at
the end of the model #, had the same dim/bright switch as the 2004/5.
So, if the unit is old enough, and it has been used heavily, the backlight
might be dim.
If it is the later version, assuming the previous owner shut the
backlight off when he was not actually LOOKING at the display, will likely
not be dim at all.

: For what its worth, Buy now.
: Mark

: qwertREMOVE@sprint.ca wrote in article
: <34c30078.46768670@news.sprint.ca>...
: A friend has one he said he would sell me but it has been on for 24
: hrs/day for over two years. Is the majority of its life used up now?
: (sorry if its a stupid question).

Other than a possibly dim backlight, the electronics in a 2006 are not
likely to fail any time soon-it's a well designed unit in most of ways
that matter.

: Also it still has the cellular blocked, is there a chance that the
: mods you people talk about won't work on it --cell fix, 1000 channels.
: (were there 2006 model made that were permanently "crippled" or are
: all 2006's good scanners).

All 2006's are unblockable-Tandy did not produce a permanently blocked
version of the 2006, opting instead to discontinue sale of it completely.

: Someone else has a 2005 for sale for about the same price with the
: cell mod done. Both model are supposedly in "excellent " shape. Is the
: 2005 any different?

The 2005 is similar, but with slightly poorer performance, and noticably
slower scanning/searching speed.

: They're asking ~$250US for each one.

$250.00 is a good price for a 2006, but a bit high for the 2005.

: Also theres a Netset/Radio Shack? 2032 for sale for much cheaper than
: the 200x's , that owner says that it-the 2032- is the same as the
: 2006's. I am of to dejanews to search on the 2032 but since I may have
: to act quickly if I want to get any of them, I am asking here first
: off.

: You don't have to e-mail me, you can just answer here if you want
: because I'm always lurking in here :)

: thx

I believe that the Netset # for the 2006 is the 204, but check with
Johnathan at Javiation-he is familar with the Netset scanners.

2451. PRO-2032 S- Meter Mod.

Newsgroup: rec.radio.scanner
Date: 1998-01-21 00:00:00 UTC
From: Johnny V Mullins <jvmullins@kih.net>
Message-ID: <01bd26b4$06682820$LocalHost@jvmullins>
Source record: 172933

I just built a S-Meter circuit for my PRO 2032, using plans posted earlier
to the group, it only reads ,
108-136 Mhz, Aero band, those are no more than S-3,4, on very strong
sounding signals, thats with the trimmer turned full value!
I suspect I've picked the RF off the wrong point, plan says the cathode of
AM detector diode D-23.---
Looking at the top of the board there are glass diodes , D-21, D22, ------
D-25, D-26, and so on. There are
only symbols for D-23, D-24,--- no diodes --- , Directly on the opposite
side of the board, under the D-23
Symbol, there is a small rectangular ,carbon looking component, silver
,with black band, marked, with
3 small dots over 2A
I picked signal off black banded end of this component.
Anyone know if I,ve chosen the wrong point to pick off RF ?
Any other ideas of what to check? Meter from old "COBRA 29" checks good!
Other componants in circuit
are new.
Thanks: J.V.M.

Correct me if I'm wrong, but isn't Spread Spectrum an emission mode? Just because you can't scan it easily doesn't make it illegal.

BTW I tried to pick up a frequency on my Opto Scout 40 coming from my DSS phone (Uniden EXP9100) and got nothing. I don't know how other frequency counters work, but the the Opto Scout 40 looks for ONE frequency that is a certain energy level above ALL OTHERS it is receiving (i.e. the RF floor). With many frequencies in use by my phone at the same time, it never picks one out of the crowd. Has anybody actually captured a frequency from their DSS phone using a counter?

Bought one of these guys on closeout at Radio Shack.

Overall, I'm satisfied. The higher scan speed, search lockout, and auto-store ability mean I'm catching a LOT more action than I did before on my bc200xlt.

The one thing I'm pissed off about is that the data squelch doesn't work. Apparently this was put on just to claim the scanner had it -- as far as I can tell it doesn't do a damn thing. This pisses me off, as it's one of the things I was looking for in a scanner.

Questions: has anyone else had a different experience with this scanner's data squelch function, what other scanners _actually_ support this feature, and might there be a way to increase the sensitivity of the data squelch on this scanner?

Overall, at $200 it was an excellent buy, but I'd love to have a functional data squelch.

It will only work in search mode, not scan mode. Also, I find that it may take a second for the radio to continue searching. The stronger the data signal, the better this feature will work. It always stops on a weak data signal and will not continue searching.

Craig:

The "Data Skip", skips "nonmodulated" signals or data signals during a limit or direct search. It is inoperable during normal SCAN mode. It does not work in AM mode. If a spot on the search does not contain a normal audio conversation, but does have some type of "modulated" noise, it will not skip. This is normal behavior for the Data Skip feature.

Bill Crocker

p.s. Mine works fine. If you still feel yours is not working, maybe you should exchange it for another one.

>Anyone have some St.Charles ,MO 800 mhz fleet id's?

Jeff

I don't have the fleet ID's (or a Trunk Tracker, for that matter), but I routinely monitor St. Charles' 800 MHz system just by locking out the current data channel and scanning the frequencies in descending order with no delay. During the day you get public service, the dog catcher, and various other departments. At night it's pretty much all public service. I can't remember a time when there's been so much traffic I've felt like I was missing a whole lot.

Please post back any freqs you have besides the following - maybe I'm missing half the system!

Writing Analysis

Tone: Insincere and artificial. Far removed from resembling actual speech.

Style: Plodding cadence and painstaking effort to attain simple, but mostly sound sentence structure.

Methodology: Composed using conventional word-processing software with spell and possible grammatical check. Final product most likely "cut & pasted" to body of E-mail message as evidenced by inappropriate line returns when text is viewed through a web browser.

Conclusion: Cadence and questionable comma usage resemble previous Mackey posts. High probability that this E-mail message is a Mackey ruse.

Actually, service providers go to some trouble to eliminate the repeating
of mobile audio. Echo cancellers are included on the circuits to do this.
Keeping the audio from repeating allows "hands-free" car kits or mobile
radio speaker phones to operate without squealing from a completed feedback
loop.

I know how it works. (or is supposed to) It doesn't do a damn thing
for me in search mode. The indicator light comes on. And I just
continue to sit there on the data frequency.

I was going to mention in my previous post that I thought it
should work in scan mode as well, but that would assume it even
worked in search mode. I can discern no effect.

>take a second for the radio to continue searching. The stronger the data
>signal, the better this feature will work. It always stops on a weak data

From: flyonthewall@sprynet.com
Message-ID: <34c67dd1.127552514@news.sprynet.com>
Source record: 172962

hello. my company ownes its own paging network and our RIC numbers are our pager numbers. my pager number is 2517 but gets sent 0002517. The RIC number is the pagers ID not its pager number like in my case. So if you know the freq. the pagers on and you are monitoring it, send the pager a page with a bunch of 11111111111111's and wait till you see it. Now make note of the RIC number, that will be that pagers ID.

All you need is someone's pager number and you can "hunt" the rest, and once you learn the RIC number you can start logging the pages.

Hope all this helps you understand.....what the fly does not know the fly will learn.

2482. Newbie Seeks Advice on Cheap Handheld

Newsgroup: rec.radio.scanner
Date: 1998-01-21 00:00:00 UTC
From: csink@pluto.njcc.com
Message-ID: <34c56095.571886@news.njcc.com>
Source record: 172983

I've never used a scanner before but recent exposure to a friends has gotten me interested. I need some advice on where to spend my dough. I want a handheld.

First off - I don't know how "in" to this I'll get so I don't want to spend a lot. Probably tops $150.

Second- My main interest is to scan freqs at Disney World on an upcoming trip. Don't know how much I'll use it once I get back but who knows.

Now my main question is how disappointed will I be if I don't get a 800mhz capable device? I see that uniden sells some refurbs at pretty decent prices and another one they make looks interesting:

BC60XLT-1: Refurb for $70. Doesn't have 800mhz or air (I'd be interested in air I think).
or
BC120XLT: No 800mhz but has air. $100 for refurb. What's the thought on this model?
or
SC150: I've seen this at grove for like $150. Why is this marketed as a "sport" scanner? What's the difference between this and a non-sport item? This looks attractive as it has both 800 and air.

Can any of these be modified to pick up cell/cordless? Can all of these use AC? Can most handhelds?

Also, what is the "TrunkTracker" feature I've seen on some higher priced models? Is it worth it for what I'm looking to do (again mainly Disney World but then some general poking around).

Looking for any and all advice on these or other models.

Thanks from a newbie,
Christopher Sink

Hi Group,

In trying to understand POCSAG, I came across the term RIC number, what is the RIC number?

Electronic Now ran a article on POCSAG encoding in the Feb 1998 and an article on POCSAG decoding in May 1997. I connected two computer back to back and send POCSAG messages over a wire between the two.

The encoder always ask for the RIC number and the decoder also displays this number.

<< Pro Data >> Version 1.6 for Windows 95.

The most sophisticated and powerful Frequency Database Manager ever developed.

The problem with my ISP during the download of the setup file "Connection reset by server" has been resolved with the setup file moved to another server.

Please visit our web site at http://home1.gte.net/prodata1/index.htm and view the screen shots before downloading the 30 day fully functional demo.

Summary of Features:

26 fields of information
Order of fields is customizable
Grid view window for easy display.
Record view window for easy data entry.
Import from Percon, Probe, ScanWare, APF, and UFDBF database files.
Export to APF, and UFDBF database text files.
Querys the database returning records meeting user criteria with unlimited possibilities.
Find and Replace data in any field.
Several types of code viewable/editable windows
Change the capitalization of data in any field
Reports - Prints to a file or printer the opened database or query.

Nearby airport?

Down on Long Island, it's not uncommon to hear some aircraft comms on
cable channel 14. Channel 19? Forget it. It's nearly impossible to
watch, with channel 20 coming in nearly just as bad. I'm sure their
distribution network is sorely outdated.

Up here, the cable company has an extensive fibre optic distribution
network, and the residential drops and interior wiring is all
quad-shield RG-6 stuff. Keeps RFI to a minimum. There's a good deal of
spatter on the scanner driving thru downtown Rochester from the paging
transmitters, but it drops off significantly as you travel away from it
all.

All you need to do and I have done it is to carefully lift one corner
and slowly rock it back and forth.
I use a plastic tv tuner type ifcan adjuster and have not pulled any
traces. I tried nail polish remover and other things and they do not
work.
You just have to take your time.

Someone else might tell you to heat it up, tell them to pop another
prozac.

Hello Gang!

I'm selling a Radio Shack PRO-27 VHF/UHF handheld scanner.
It has 20 channels, keypad programable in the box with book.
It covers 29-54, 137-174, 406-512 MHz.

Also have the Service Manual for it.

First $50.00 gets it!
Make an offer if you really want it1

Pete

2500. FS- 10+ Unblocked Icom R-7100 + R-7000

Newsgroup: rec.radio.scanner
Date: 1998-01-21 00:00:00 UTC
From: bush143@postoffice.worldnet.att.net
Message-ID: <6a5187$jqm@bgtnsc01.worldnet.att.net>
Source record: 173001
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.shortwave

Both radios are unblocked, in Mint condition, with original
boxes/packaging and manuals. Here are the specifics:

R-7000: $1250
Comes with the optional TV-7000 adaptor and CT-17 interface
which are both unused and still wrapped in plastic.
Never got the software for it. Price without these
options will $1050. (This radio is truely a 10+)

R-7100: $1050
Comes with the optional "original" service manual. This
radio is truely a 9.5, The computer interface above
is compatible with this radio, but the TV adaptor is
not. Purchaser can choose to include the computer
interface for a package deal of $1150.

2501. FS- Mint + complete Sony Pro-80

Source record: 173002
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap,rec.radio.shortwave,rec.radio.amateur.equipment

Comes with the original manual, VHF converter, and antenna. Also comes with these Sony options: heavy duty Sony leather case + Sony rechargeable battery pack, and Sony AC adaptor/charger.

This is a portable radio that picks up SW, Air, VHF ham, Police, AM and FM. Its capable of wide and narrow AM, FM, SSB modes with fine tuning. The radio is in truely 10 condition. Reason for sale is it sits in the closet with little use because I have too many other toys to play with. A deal at $225.

Source record: 173005
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap,rec.radio.shortwave,rec.radio.amateur.equipment

A truely 10+ Yaesu frg-9600 with the original box, users manual, ac adaptor, and mobile bracket (never mounted). It also comes with the optional TV adaptor and the original service manulal.

The radio covers 60-950 MHZ without breaks. Its capable of AM/FM and SSB modes. The radio has 100 memories and can be used with a PC. (I never purchased the interface or software.) The radio has built in timers (for on/off times) and sleep timer.

The radio has been sitting in the closet with very little use. This is the cleanest used FRG-9600 you will find. Asking $500.

2505. FS-Unblocked Standard AX-700/CCR-708a receiver

Newsgroup: rec.radio.scanner
Date: 1998-01-21 00:00:00 UTC

Source record: 173006
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave,rec.radio.swap,rec.radio.amateur.equipment

This is the radio with a built in real-time spectrum display. It was recently reviewed in the UK Shortwave magazine very well; I will include article.

The radio covers 50-950 MHZ Unblocked in Am and FM modes. Its capable of scanning or just monitoring. Its virtually new in box, and truely a 10+. The radio comes with the original box, manual, ac adaptor, antenna. Its been sitting in the box in my closet.

I would like to sell this radio for $600 shipped. This is an excellent radio for monitoring, activity hunting or surveillance. You can see the activity on adjacent freqs without actually tuning to these freqs.

2506. FS - Mint Sony 7601 SW

Newsgroup: rec.radio.scanner
Date: 1998-01-21 00:00:00 UTC
From: bush143@postoffice.worldnet.att.net
Message-ID: <6a52jq$pvj@bgtnsc01.worldnet.att.net>
Source record: 173007
Cross-posted to: rec.radio.scanner,rec.radio.swap,rec.radio.shortwave,alt.radio.scanner,rec.radio.shortwave

This is the UK version with a UK ac adaptor. The radio is NIB with the original manual, box, manual, spool atenna, Sony carrying case and earphone. The radio can be used with 4 "AA" batteries.

It has a "LCD" analog display with a digital readout. The radio is very nice without a mark. Its virtually new and has been in the closet. Its capable of am and fm modes.

I would like sell this very nice portable SW for $125.

2507. What is the best scanner to currently purchase?

Newsgroup: rec.radio.scanner
Date: 1998-01-21 00:00:00 UTC
From: Knight <knight13@slip.net>
Message-ID: <34C61066.1D8E0720@slip.net>
Source record: 173008
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I was curious to know what you guys think the best scanner currently
available that would fit these purposes:

1) Discriminator modification easily (or already built on)
2) Military Freq mod avail (200-400mhz)
3) 200-1000 channels (200 req... up to 1000 is cool. doesnt NEED
1000)
4) Computer controlled would be nice, but again not MANDATORY
5) relatively affordable (not above $400)

Any ideas? Email reply would be nice! Thanks...

I'm a Greyhound driver. It is prohibited for us to use any radios on board, not even cb radios or am/fm radios. The 1st offense carries a 10 day suspension. The 2nd is a termination of your job.

Our union, Amalgamated Transit Union Local 1700 is trying to get "The Dog" to install cell phones and to allow the use of cb's.

Current policy is ridiculous, but that's Greyhound mgmt. for you.

Christopher Sink wrote:
> I've never used a scanner before but recent exposure to a friends has
> gotten me interested. I need some advice on where to spend my dough. I
> want a handheld.

Hi Chris,
For starters, try having a look at my New Scanner User FAQ
listed in my signature. Contains some basic info as well as
links to other pages I maintain which might be of use to you
at this point.

> First off - I don't know how "in" to this I'll get so I don't want to
> spend a lot. Probably tops $150.

Just so that you are aware...today's market goes from around $100
to over $500 for handhelds. So you're talking the lower end...just
so you don't get your hopes up.

> Second- My main interest is to scan freqs at Disney World on an
> upcoming trip. Don't know how much I'll use it once I get back but who
> knows.

Have a look here

http://www.qsl.net/n2mca/SERVICES.HTM

and see if there's anything that interests you. I'm sure you can
find plenty to listen to while at home. And scanners can become
a great source of info when you travel.

> Now my main question is how disappointed will I be if I don't get a
> 800mhz capable device?

Probably pretty disappointed but it depends on where you live and
how many agencies are using this band for communications.

> I see that uniden sells some refurbs at pretty
> decent prices and another one they make looks interesting:
>
> BC60XLT-1: Refurb for $70. Doesn't have 800mhz or air (I'd be
> interested in air I think).
> or
> BC120XLT: No 800mhz but has air. $100 for refurb. What's the thought
> on this model?
> or
> SC150: I've seen this at grove for like $150. Why is this marketed as
> a "sport" scanner?

Just Uniden trying to capture a niche market for itself. This scanner has 10 buttons that allow you to instantly go to one of ten pre-programmed frequencies. There's also a little sheet on the front which you can use to label these for easier identification. So the idea is you program up your ten frequencies before going to the NASCAR race(say, with your favorite team/car frequencies). Once there, you can instantly go to a frequency by pressing a single button.

> What's the difference between this and a non-sport item?

Nothing really except for this one-touch feature. And it's the only scanner I know of that available in two colors! Quite the selling point, huh? ;-)

> This looks attractive as it has both 800 and air.

Probably your best bet for an intro model.

> Can any of these be modified to pick up cell/cordless?

Almost no newer radios can be modified for cell as per federal laws of 1994. Almost all scanners pick up the cordless freqs.

> Can all of these use AC? Can most handhelds?

Can't recall a handheld which doesn't use AC. Uniden models typically come with an AC adaptor...they need it to charge the ni-cad battery.

> Also, what is the "TrunkTracker" feature I've seen on
> some higher priced models?

Again, see my New Scanner User FAQ and the Trunking topic for more details.

> Is it worth it for what I'm looking to do (again mainly
> Disney World but then some general poking around).

Would be of use if Disney is using an 800MHz trunked radio system. But since you are new and only going to use it for a short time, it would probably be more of a hassle to learn, program and use than what it is worth.

The SC150 SportCat will serve as a good intro model for you and help to decide if you are willing to delve deeper. Which you most certainly can these days with the large number of manufacturers, models and accessories that are available.

> Looking for any and all advice on these or other models.

Have a look here as well

You could also drill a couple of tiny holes down to the IC terminals
and then fill them in, and across, with conductive paint.

2516. Need BC895 Disassembly Instructions

Newsgroup: rec.radio.scanner
Date: 1998-01-21 00:00:00 UTC
From: aaronr@vytalnet.com
Message-ID: <885405440.1588527111@dejanews.com>
Source record: 173017

I would like to tap the discriminator of my BC895. Before I do so, however, I was wondering if anybody had some detailed disassembly instructions. I would feel a lot better about it if I knew exactly what screws to remove, what to watch out for, etc.

I plan on routing the output after the resistor and capacitor to my remote jack, as I won't really be using it for recording anyway. (I'll be disconnecting it from the scanner's circuitry first, of course.) That way, I won't have to drill any unsightly holes in the case.

Also, I have heard that the pin in question is on a surface-mount chip and is difficult to get at. Are there any test points that are easier to access? (On an older scanner of mine, there was a 0K resistor standing on its end by pin 9 of the FM chip.) If not, what precautions should I use when soldering to this pin?

Thanks for any help. Replies by E-mail preferred.

2517. NEED HELP WITH PRO 26!

Newsgroup: rec.radio.scanner
Date: 1998-01-21 00:00:00 UTC
From: patbrown@webtv.net
Message-ID: <6a5bc2$3cg$1@newsd-123.bryant.webtv.net>
Source record: 173018

I recently purchased a Radio Shack Pro 26 scanner with a date code of 2A96 and would like to know how to restore the cellular frequencies. I know of one mod in which a chip is jumped, but the chip in my radio is covered with a hard, black epoxy. Is there a way to receive cellular frequencies on this radio without jumping this chip? If not, what is the best way to remove this epoxy without damaging the chip or the radio itself? I thought about heating it with a soldering iron, but I was afraid this might destroy the chip because of the heat. Anyone with experience modifying this scanner that could help me out would be appreciated. Any other useful info on the Pro 26, besides the cell mods, would also be appreciated. Thanks in advance.

I think the circuit you've build inverts the signal. This means that
you must add the word "invert" after trunker.exe I suggest you also
eliminate the .1uf cap that's in series with the incoming audio I had
simular problems and found my problems were with the signal level into
the slicer.

Try:

trunker.exe invert

or

trunker invert

Just in case your considering buying a Trunk Tracker and trying to decide between Radio Shacks Pro90 and the Uniden 235xlt, I just found out some interesting information...

A replacement battery pack for the Radio Shack Pro90 is $51.99! (part number CS90013)...yep, they're getting $52 just for the batteries for the damn thing...

Considering that Uniden is GIVING AWAY a spare battery pack AND charging cradle...well, you make up your own mind.

Nope, Radio Shack doesn't even sell the spare battery charging cradle...

>The frequencies for the VA. State police have apparently changed.

What part of the state do you live in?
I live in Hampton or division 5 and we had a frequency change several months ago. Well I souldnt say a frequency change it was more of a channel change. Units on the East side of the Hampton Roades Bridge Tunnel changed from Ch 9(159.165) to Ch 10(159.135). All previous Ch10 units changed to Ch9 with the remaining West side ch 9 units.
I guess what I am trying to say is check the other State Police freqs. They may have just moved. Let me know what you find out.

2543. Re: E.E.B. raided by the F.B.I. !!!!!!!!

Newsgroup: rec.radio.scanner
Date: 1998-01-21 00:00:00 UTC
From: jtward01@aol.com
Message-ID: <19980121032400.WAA19322@ladder01.news.aol.com>
Source record: 173129

For those interested in the truth about this, the facts as I understand them are:

1.) The FBI raided EEB as part of an investigation into certain government employees who were using government purchasing orders to acquire radio equipment for personal use or possible resale. EEB, while not a target of the investigation, was treated as such - and its sale records seized - until it could be determined that no EEB employee was involved in the scheme.

2.) EEB went out of business due to the overall downturn in the hobby radio business, and because a former employee apparently embezzled more than $1 million from the company over a three to four year period.

This information comes second hand, but from a usually reliable source. Still, I cannot vouch for its accuracy, but it does fit with information I was able to confirm independently.

John

868.92500000
868.95000000

Courtesy a lil' scanning and the fcc database. These frequencies are trunked so conversations will hop around. One channel will be all data. The transmitter is located at 1100 poydras and broadcasts at 100 watts.

Last night I caught a number of muggings, a 19 year old caught 'in flagrante delicto' with a 15 year old (he was arrested) and a scanner confiscation, haha, among other things. Apparently someone was using it to gain an advantage in the course of criminal activity, which apparently is a crime.

What I believe are the mobile radios are located between 821-824 mhz.

Enjoy.

PS -- radio shack is clearing out the pro-26, a real nice scanner,
for $199 right now -- there may be some left. Got mine day before
yesterday. This scanner usually goes for $450. It covers 25mhz-1300mhz
continuously except for cellular. (which one can get around a
number of ways -- but that would be illegal. ;))

The units sold in Radio Shack stores in Canada are cell-blocked. You
may be able to find a HAM shop that sells the PRO-26 unblocked.
However, most HAM/Scanner shops sell the high-end brand names (and
charge alot for them). Try www.com-west.com

Much as I hate to repeat myself, please be more specific. Are you
not getting any decodes? Are you getting decodes that look like junk?
What software are you using? Are you using a soundcard?
A discriminator tap won't help you at all; ACARS is AM modulated,
while discriminators are primarily used in FM work.
Let's see what you are getting- if anything. 73s Mike

Hello,

As someone 'in the know' if you just paid $99 for this scanner at a RadioShack I suggest you go and ask for your money back! They are currently in disco/deval status-which means if there is a store with one left it SHOULD sell for $79!!!!!! YOU GOT RIPPED OFF! Besides, the value of his scanner would be deteremined by it's date code, which would tell us if it is cell modifiable or not. BTW, the ones you geeks just bought at RS are NOT cell modifiable-except perhaps throught that lame-o keypad trick. Next time before you open your mouth and insert BOTH feet I suggest you double check what you know.

Cliff

Hey everyone, in the Feb-1998 issue of QST magazine on page 48 there is an article of how a couple of guys in the Washington DC/Maryland/Virgina area put up a dedicated realaudio site using an Icom R-7000 receiver, get this, ITS USER CONTROLLED.

Thats right, YOU TUNE!!!! On the page I'll list he has a list from his memory banks, but you can also manually enter any freq. between 25mhz ~ 1300mhz in FM-N FM-W AM SSB... This is pretty wild, I like the sites like www.policescanner.com, but those are SET monitoring, with this site, you can control the actions of the radio.... You must have RealAudio Realplayer (www.real.com) and a soundcard with atleast 28.8bps connection to the internet and the browser must be JAVA compliant...

The ONLY drawback to this setup is, ANYONE can go to the page and change the frequency that you are monitoring without any warning, but hey, its pretty awesome....

The webpage is: http://nihac.info.nih.gov/listener/listener.html

Jimmy...

Don't waste time, go to your Local Radio Shack and get the PRO 26!
It sold for $459.00 awhile ago, now on sale for $199.00 ($49.00 more than
you want)
It's worth it.... 25-1300 mhz (no gaps) and a lot of bells and whistle...
Maybe a better unit then what your friend may have....
Go!

2576. Pro-37 Keypad Problem

Newsgroup: rec.radio.scanner
Date: 1998-01-22 00:00:00 UTC
From: mhtcjt@aol.com
Message-ID: <19980122152500.KAA15314@ladder01.news.aol.com>
Source record: 172895

My father has a Realistic Pro-37 programmable scanner. The keypad is not working and we can't program frequencies, etc. We took it to our local Radio Shack who told us they could repair it but, after two weeks, told us the "parts were no longer available." Has anyone had a similar experience? Is there anything else we can do?

My father is 70 years old and has Alzheimer's disease. He has always been a scanner enthusiast and at this point, has very few other interests. He cannot even program the scanner himself because he is not capable so we hate to spend a lot of money on a new one. We thought if we could get this one fixed, it would make him happy and keep him occupied.

Any advice? E-mail me at mhtcjt@aol.com.

I have a BC120XLT scanner that is new enough that the plastic bags it
came in haven't been opened. I'm am taking any reasonable offers, below
is a description of the scanner.

The Bearcat BC 120 XLT Scanner radio is a 100 channel hand held unit.
The frequency coverage is from 29 - 54 MHz, 108 - 174 MHz and
406 - 512 MHz. The radio has a dual conversion receiver with a scan
rate of 100 channels per second. Other features include pre-programmed
service search, ability to set search limits, weather key, unique
data skip function, 10 priority channels, channel lockout key, full
frequency LCD display as well as twin turbo scan and search. The radio
comes with a ni-cad battery pack and AC wall adaptor/charging unit.

Vince,
You needn't have made this declaration. Many posters on various groups advise of items at auction on eBay. However, to become "an eBay user" is not an option of a select few. Those readers who wish to view --and place bids-- on an item must, first, visit the eBay home page at http://www.ebay.com to register or go directly to registration at http://komodo.ebay.com/aw-cgi/eBayISAPI.dll?RegisterShow

Emilio,

At the risk of sounding like a pessimist, the Police exist for the purpose of protecting the very rich & powerful. It's a fact!

If you are indeed "powerful" why are you being harrased and fined? Also, why can't you afford a lawyer?

I think there might be other problems you should address first before you even think about getting your (alleged) radio back!

Cheers!

2580. WTB: really cheap scanner (PRO-38/41, BC50/55XLT, other?)

Source record: 172899
Cross-posted to: rec.radio.scanner,rec.radio.swap

I have no idea if anyone has what I'm looking for, but I might as well ask.

I'm looking for a dirt-cheap scanner. I'm really only interested in
49Mhz and 150-163Mhz -- any other freq's are optional.

Handheld or base station is fine. Must work without problems, but cosmetics
aren't much of a concern. For that matter, the antenna is optional -- for my
needs I can just hook up a section of wire. I'd prefer one that hasn't been
soaking in cigarette smoke.

Price is a major concern -- I don't want to spend more than $20 + shipping.

As I understand it, any of the following would fit the bill, and would be
in about the right price range: PRO-38 or PRO-41 (same radio, according to
one web page) BC50XLT or BC55XLT.

If you've got something better than these models, but because of some problem
(missing antenna, cracked case, bad display) you'd let it go for my asking
price, then by all means let me know.

I have bought and sold quite a bit over the net, and would be happy to provide
references.

Hi Jimmy,

This is a really cool site!!!

I also remember a WEB site that was located near Reston, VA
that had a simular setup. It was a shortwave Radio that
you could manually tune (from 150 kKz to 30 Mhz) and listen
to 30 second clips via Netscape Audio.

Does anyone know what the URL for Tunable Shortwave Radio
site is?

Thanks

Bob

ICCclaims <iccclaims@aol.com> wrote...

> If you ae interested in trading fire leads for cash email me...

Ladies and Gentlemen:

I can think of no endeavor more deleterious to our hobby than engaging in such a practice.

Ethical business people rely on word of mouth, community involvement and display
advertising to support their enterprise. They don't offer "payola".

We have laws to prevent ambulance chasing attorneys, but "claim adjusters" are bound
to no ethical code whatsoever.

While I have no personal knowledge of the person or agency that posted the message,
I can say that in the area which I live, I have seen such "adjusters" badger, belittle and
intimidate fire and accident victims on almost a daily basis. The ones I have personally
encountered are lying vultures. I am not saying that insurance companies are perfect,
but they don't to my knowledge engage in the outright deceit that many of these aggressive "adjusters" do.

It won't be long before some big city newspaper or investigative TV show looks into this matter.
I would hope at such time that "scanner listeners" are not portrayed as being mercenaries that add to the pain and suffering of the victims of calamity. Such a portrayal would decimate our hobby.

There are no doubt many upstanding individuals that work in the field of claims adjustment. Like noble attorneys, you will not see them offering "payola" or chasing lights and sirens. I would hope that my brothers and sisters in South Carolina would not stoop to such vulgar behavior.

These are my personal opinions and do not reflect the views of my employer(s)

Brian

2589. Oscillator Tuning Tool Rebuttal (To John Mackey)

John Mackey -- KA0SSF <jmackey@usa.net> wrote under
Subject: Re: Bill Cheek is an ASSHOLE on
Date: Tue, 20 Jan 1998 09:36:22 -0800:

> Yea, right. Like suggesting people use a metallic tuning tool to
> adjust the slug in a oscillator, that is really someone who knows what
> he's talking about, NOT!

Macksie, you are as ever, a sniveling imbecilic idiot. Here
is the deal that you keep harping on without ever acknowledging
the TRUTH of the matter or offering viable alternatives.

The issue is associated with X-301, a 10 MHz oscillator
in the PRO-2004, PRO-2005, and PRO-2006 scanners, where
there is an adjustment to precisely calibrate it.

The adjustment slot is non-standard, and out of the realm of
possibility of normal tuning wands and related tools. They
simply do not work. BUT....in this case, it doesn't matter!

First of all, the oscillator housing "can" is grounded, and
secondly, the adjustment slug is the grounded side of the
tuning capacitor. Thirdly, Radio Shack's #3 flat-blade
jewelers screwdriver fits that adjustment precisely and
perfectly. Here is a picture for you:

access.hole
__ : __________
| : ground |
| : adjust |
X-301| ___/ plate |<--Metal "can"
| ___ |
| |\ hot side |
| of cap |
==================== <--PCB

There is NO detuning when the screwdriver is inserted
into the access hole and there is no risk to the module
since the can and the slug are at ground potential and
the internal electronics are not under the hole. I have
researched this device and the procedures for adjusting

it over several years, and what I wrote up *is* the best
and most sure-fired way to success for the hobbyist.

If there is a "correct" alignment tool for X-301's
tuning slug, I've never encountered it, and I have
hundreds of tuning wands and tweakers in my arsenal.
None...bar none.....work properly.

Get the story straight, Nincompoop! I would not insert
a metal tool into a tuning coil; nor would I use a metal
tool on the "hot" side of a tuning capacitor.

But I *can*.....and *did* write THE BOOK on correct
adjustment of X-301 in these scanners. *If* you think
there is a better way and a better tool for the job,
then YOU rewrite "the book", or better still, one of
your own!

If you had the "hair", that's what you'd do anyway. But
you don't have the "hair". You don't have any semblance
of what it takes. You're a sniveling, whining, crying,
wannabe.......and saying THAT gives you more credit than
you're worth.

But stop lying about the *facts* of THIS unique issue.

Hi All:
I am wondering if in Canada, Radio Shack scanners still have blocked
freqs like the USA ones? Can anyone fill me in on this question?
Also, are there any shops in the Vancover BC area that sell non-blocked
scanners at good prices that you can recomend to me.
Thanks, Bri.

->
-> Interesting. F&G currently has their own system on VHF-Hi, if memory
-> serves - do you know if they plan on moving everyone up to 800 MHz?

Parks and Rec. already are on an 800 system, I'm pretty sure that's where F&G will go. It's easy to add new talkgroups and even freqs if necessary. Having multiple agencies sharing a system makes it easier to communicate across agencies in an emergency.

2607. Useless R-10 Cloning Software

Newsgroup: rec.radio.scanner
Date: 1998-01-22 00:00:00 UTC
From: krkirkwood@sprintmail.nospam.com
Message-ID: <MPG.f31d040ccd3bc619896a1@nntp.a001.sprintmail.com>
Source record: 172926

Below is the less than helpful response I received from ICOM when I asked about a definition of the .ICF file that ICOM uses for the R-10 software. Since their software is barely above useless, I'm going to try to write my own. The part that I have no clue as to where to start is how do you figure out a proprietary file format with out the author's help?

>> So why did they make the cloning software so lacking in functionality?

I do not know. The factory does not like be tied up attempting to support another's database at this time.

>> Surely they did not expect someone to enter all those freqs, modes, tuning steps, etc by hand?

Yes they do, the cloning software should assist here as it is easier to utilize

>> There has got to be a better way. How about a document that defines the file structure?

The factory has decided this information is proprietary and will not release it.

>> I have to admit that I'm pretty disappointed with ICOM's work on this software.

Well ICOM attempted to make this software work for the masses. This DOS bases
package will work on 386 processors up though it does not get along with windows 95.

> DSS phone using a counter?

You won't. SS spreads the power out over the entire band. Because of
this, the output of the transmitter is effectively -20dBm below the
power rating of the transmitter on a fixed frequency. In most cases,
that is below the noise floor.

I had one in my hands last weekend, a good buy at $249 I thought, but
when I opened it and saw the battery pack I put it back. Why use a
soldered pack (easy enough to make yourself IF you can get the
connector) instead of single cells? TO SELL OVERPRICED BATTERY PACKS
of course!

The Shack really pisses me off sometimes ... grin!

: : FYI:

: : You can buy these new at Radio Shack for 99.00.
: : I just did.

Only if you find a store with VERY old stock
BTW, I picked one up near me a few months ago, with a 1992 date code, for $70.00 + local tax.
This was a display unit, in near perfect condition(9/10), but missing the manual and accessaries(no big deal, unless you are going to use it mobile).
As for the manual, it is available for free from Tandy's web site.
If you can find a NEW one in the box, complete, particulary if it has a date code of 4/94 or less(the date when the 2026's were made unmoddable), then $100.00 is a good deal
If you end up with a really old one, then it will have a 3 wire cord-to maintain the memories, wire a 9-volt battery between the orange wire and ground(or if you feel comfortable inside a scanner, mount it inside the 2026(there's plenty of room for it).
This battery will last nearly it's full shelf life, as the power drain is well under 1 Ma.

: : > **I have heard that the 2026 can be modified for FULL cellular coverage

Most 2026's can be modded, but the last batch couldn't be.

: : > and that their might be a keypad trick for it also**

Nope:you can indeed get 888.960 on channel 23, but since the 2026 can not do a direct search, you can not tune in that range(unlike the PRO-2030, among others, which can).
On the other hand, the 2026 images the CMT freqs quite well-just add 21.6 Mhz to the desired freq, and punch it in.

Not@All.Real (Dan T.) wrote:
> ... how you would go about creating a new group. Does it have to
> be requested to the ISP news server sysop or can anyone start a group?

ISPs are not involved in the establishment of newsgroups, other than
simply transporting the postings. The procedure is spelled out in the FAQs:
news.announce.newgroups: How_to_Create_a_New_Usenet_Newsgroup
alt.config: So_You_Want_to_Create_an_Alt_Newsgroup
These are regularly posted and are also available from:
ftp://rtfm.mit.edu/pub/usenet/news.announce.newusers

The procedure begins with an RFD (Request for Discussion), posted to
news.announce.newgroups, news.groups, and any other groups related to the
proposed topic. Once the discussion period is complete, a CFV (Call for
Votes) is issued and an independent judge tallys the result. Initiation
of an .alt group is somewhat simpler. In either case, the approved group is
activated by the sending of a newgroup message. The only involvement by
an ISP or SysAdmin is the reception of the message and updating their lists.

2624. info needed on INF-2

Newsgroup: rec.radio.scanner
Date: 1998-01-22 00:00:00 UTC
From: master@mmbbs.dyn.ml.org
Message-ID: <34c6ee63.17629513@news.iamerica.net>
Source record: 172974

Got a rebuilt INF-2 for free in an excange for a credit my distributor said he owed me. He didnt owe me anything but I took it.

It came in a INF-1 box and the 2 scanner doesnt work like the one described in the manual.

Anyone know what the codes stand for such as RS and others? And how to program this thing. I have figured out how to add in channels but cant see how to unlock a channel you have locked out. Also what is WA and WX. I am asuming that WX scans the weather channels for a weather aleart signal but am not sure.

Also wondering if anyone knows of modifications to this unit. Anyway to make it search everything and not just my state.

2625. FS: Unblocked Xplorer

Newsgroup: rec.radio.scanner
Date: 1998-01-22 00:00:00 UTC
From: tthowley@edcen.ehhs.cmich.edu
Message-ID: <34c695b0.0@zeus.moa.net>
Source record: 172975
Cross-posted to: rec.radio.scanner,rec.radio.swap

Unblocked Optoelectronics Xplorer for sale. It is in Mint condition. I've captured the elusive freqs that I wanted at the local mall, so now I'm ready to pass it on to a new "explorer". 8 months old. Full 800 MHz.

Comes with all original accessories- Xplorer, Zipper case, Telescoping Antenna, Computer Cable, Software, Manual plus a few extras: Stubby duck antenna for covert operations, Spectrum FCC Database CD and I'll pay shipping USPS COD Priority Mail with insurance.

I'm asking $850. Or best reasonable offer. No Trades

>software upgrade at this time.

I found the following in PCR1000.ini:

DSPON=0
DSPANF=0
DSPNR=0
DSPNRLEVEL=0

At a wild guess:
ON = accept or reject filter, i.e. narrow CW (300Hz)
ANF = automatic notch filter (accept filter if NR=0)
NR = notch rejetion
NRLEVEL = level of unwanted tone rejection activates

Source record: 172734

-> From: corbin@physics.ucla.edu (Brent Corbin)
-> Subject: Re: LAPD Goes Digital
->
-> That's sort of what I was suspecting would happen. But if my memory
-> serves (only a 50/50 chance of that 8*) the P&R operations weren't
-> trunked. I can't verify their data (haven't listened to P&R), but it
-> seems to me most sources indicate that they use conventional 800 MHz
-> systems with a single freq assigned to each region.

It's not trunked now, but if they add even one more frequency, they'll
HAVE to go trunked. And that's likely.

-> There have been some hints here and there that the state was going
-> to go to a statewide trunked system - I think there were three freq
-> schemes - one for the North, one for the South and one for the
-> Border region, and my impression was that there was going to be a
-> massive migration of statewide resources to the new 800 MHz system
-> --- I don't have the info handy, but I'm rather sure it was a
-> different pool of freqs than P&R are using.

I think CalTrans is already on a trunked system except for southern
areas. With local agencies going heavily to trunked systems, the State
is kind of forced into it, for safety purposes if nothing else.

>Has anyone had any experience with one of these?

My experiences after a month of use.

1. Absolutely eats batteries for lunch and dinner :) I get about 5 - 6 hours of use before time to change out the AA cell.

2. Quick, accurate frequency measurement from strong HT's about 30 yards away. Sometimes it picks up cell phone frequencies from users a few yards away.

3. Convenient and stealthy; no goofy looks from onlookers as you descretely find frequencies nearby. Availble right there on your belt at all times

4. Optional antenna a must!!! But its configuration makes the unit a little less conspicuous.

5. Three frequency limitation in record/capture mode. Note though that in operational mode unlimited hits can be recorded manually. (It took me a while to figure that one out !!! DUH...)

6. In summary a good toy for the price. I have gotten several interesting frequencies in my area with it. It has also helped me legitamately obtain some frequencies during an interagency communications coordinations event that my radio club was involved in.

All of a sudden I will here the squelch break open as if someone was keying up and unkeying the mic.
This will happen on every frequency it scans.
While I am listing to a call, I will hear the same keyup again just under the signal I am listing to.
Again, it could be listing on 145.29 or 450.300 or in the 800 mhz band. has anyone else had this problem?
Naturaly the owners before me NEVER had THIS problem!

Thanks

2647. Does anyone own a service manual for a BC200XLT? Where's Q201?

Newsgroup: rec.radio.scanner
Date: 1998-01-23 00:00:00 UTC
From: fakeaddress@spambuster.com
Message-ID: <6aafumclr1@kali.ziplink.net>
Source record: 172786

I'm trying to locate the power conservation transistor that's located on the micom board of a BC 200XLT handheld. Can someone give me accurate instructions on how to locate this component? Which board is the MICOM board? The one attached to the keyboard, or the RF board attached to the metal chassis?

I can't get a service manual from Uniden since they appear to be out of stock.

Having found the board, can someone tell me exactly which transistor is q201? Which cap is C55?

Thanks
Chris
N1AUP

Here's the note:

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

The FT50r is a Ham radio, if you don't have a licence you may not be able
to purchase this radio. Also that radio has many limitations, eg. the
front control panel doesn't have all the features the radio has, you have
to choose what panel you want when you buy it.

2652. PRO-29 Discriminator Mod

Newsgroup: rec.radio.scanner
Date: 1998-01-23 00:00:00 UTC
From: Knight <knight13@slip.net>
Message-ID: <34C8D7A2.93EB934D@slip.net>
Source record: 172791

Here's the PRO-29 Discriminator mod for tapping of the discriminator chip. It wasn't listed anywhere, but I figured it out (was pretty simple).

You want to open your PRO-29 unit up, and on the board you will see a TP1 (test point 1) which should be right next to a chip labelled MC3361 (the motorola discriminator chip they chose). Feed right off of TP1 and ground. That should do it. If you choose to feed directly off the chip, it's PIN 9 for the output.

For those of you who don't know, the discriminator chip is an audio amplification chip to modify the audio coming into the radio, preparing it for the speaker and earphone plug. For digital decoding, tapping off the earphone jack usually does not have enough clarity and is distorted.

Enjoy guys!

Knight
knight13@slip.net

BTW, I am looking for any other mods for the PRO-29. Let me know!

I'm looking for the frequencies for Bowers Ambulance, my current employer, and AMR ambulance, my former employer, in Los Angeles.

The listed Bowers frequency for Bowers, 47.620, is no longer used, I have that on good athourity from my wirehead partner who actually did some of the radio hardware work for Bowers. He's sure that the new frequency is somewhere in the 400mhz range, although I have yet to find it searching through the appropriate areas within 400mhz.

I'm also looking for the AMR channels for the Los Angeles area, the San Gabriel Valley in particular. Never been able to find those either.

If you can email me directly with responses, I'd apprieciate it, I don't have much time to even check my email with my crazy shift schedule, let alone cruise the usnet like I'd like. Thanks.

Source record: 172797

I like to listen to APPROACH CONTROL on 135.65 MHZ (San Francisco area). Although I hear the planes just fine I don't hear control (unless I use an outdoor ant). However, I found they also transmit on UHF 350.8 MHZ. This signal is very strong.
Here is the problem: For some unknown reason (at least to me) it is very intermittent. For example, I will hear them on 350.8 all day Friday and Saturday. Then not at all Sunday, Monday etc. They are either on for long periods (couple of days) or off for a couple of days. They are always on VHF 135.65. Why is the UHF on/off for days at a time?????

2659. ACARS On the PRO-2006 -- Help!

Newsgroup: rec.radio.scanner
Date: 1998-01-23 00:00:00 UTC
From: feinstei@mailhost.fsic.ford.com
Message-ID: <6aapja$l891@eccws1.dearborn.ford.com>
Source record: 172798

Please help if you can.

I am attempting to receive and decode ACARS using my PRO-2006 and the Universal M-8000 decoder. I have added a discriminator output to the PRO-2006. I have tried feeding the M-8000 decoder with audio from the speaker and headphone jacks and via the discriminator output that I've added. I have not had any luck. The M-8000 DOES decode ACARS from a CD recording of ACARS transmissions that I've played back into it. Does anyone have any insight on ACARS reception from the PRO-2006?

Thanks,

Fred

OH YES...the IDIOT of Smelly Mackeral
is responsible for you idiots bantering
back and forth and two and fro about
the similar stupidities with you and he.

HE's a complete non-problem...you are the
problem. Not him.

if you queens would just "observe" restraint
and quit jerking him off at the same
time as you are doing, then the Mackeral
of Stink would go away.

Quit Jerking Him Off and allow him to die.

What does that mean?

Quit posting things about him or his mama or
any of the many Presidents who have sucked his
and not enjoyed it. Let him die. How.

QUIT POSTING ABOUT HIM OR TO HIM OR FOR
HIS BENEFIT. he'll go away. and if he does
not, then don't read his shit.

YOU ARE THE PROBLEM...not the smelly one.

You have the answer: quit posting about the JM
schmuck. Allow him to revile in his own manure
and no one notice it. He will be alone.

GROW UP!

As a pilot and scanner guy, I may have a good answer for you. Controllers often simulcast (there's a word we don't hear too often anymore). If they have no need to announce to Civilian and Military at the same time, they may only talk to one or the other. I get the same thing on two frequencies at our small (Class D) airport. In that case they put Tower and Ground together. It depends on the nature and volume of traffic (and the number of controller(s) working at the time).

With all the RS models being discussed on this forum, I never hear anything about the RS-39. No FS, or requests for mods. I just thought that was strange. I bought mine in early '94 and performed the cell mod. (Which I thought was rather difficult) The mod worked as advertised, and a buddy of mine bought a RS-39 and performed the same mod with the same result.

I run a RS 2032 base scanner w/cell mod everyday, and the handheld Pro-39 is tucked away in cold storage for back-up.

But because of the absence of discussion or lack of FS posts of this model (RS Pro-39 hand-held); is there something wrong with model that I don't know about?

>model (RS Pro-39 hand-held); is there something wrong with model that I
>don't know about?

There is nothing WRONG with a Pro-39 scanner. It was the predecessor
to the Pro-43 and looks very much like it. I do believe that the
Pro-39 was only a dual conversion scanner whereas the Pro-43 is triple
conversion. I have seen several Pro-39s for sale on this newsgroup and
have had a few ask questions about what to do when they have
encountered problems with keypads, etc.

One of the biggest problem that readers of the newsgroups have is that
they don't see many of the posts. This is caused by the fact that not
all of the posts actually trickle down through the various levels of
the internet...and on the other side, some ppl's posts don't always
get out to all of the outside world. I have had to resort to paying
the Super Zippo News Service to provide me with greater newsgroups
coverage.

Go to http://www.dejanews.com/ and do a search on "pro-39", I see that
there are 10 RECENT postings that mention the Pro-39 and if you check
on the OLD postings, there are over 500 of them.

It can be modded. I would venture to say that you should be able to
get $175-200 for it if it is modded for cell and is in mint condition.
Im not really implying that it is worth that, but there are those out
there that go crazy when you mention that it is cell capable.

You can find some info about modding it by going to the following
link: http://w5gb.nmsu.edu/kc5kto/mods/pro39cell.txt

There are a few mods available to this model as there are mods
available for ANY scanner....just not always the mods in which you
might be looking for 100% of the time.

For programming the scanner with a computer, I would definately
suggest the PROgramit interface:
http://www.qsl.net/ka2pyj/

For some of those other mods, I think the next link might work for
you:
http://w5gb.nmsu.edu/kc5kto/base.html#pro2030

This sounds stupid but as an ex-computer tech-----Are you SURE that you are plugging into the correct spot??

It should be going to the spot labelled LINE IN, if you are putting it anywhere else you are doing it wrong. If you ARE doing it right then e-mail to me directly and I will help you figure out the problem.

Yes, triple conversion scanners will greatly cutdown on the cellular
images that you are experiencing while trying to listen to the 800Mhz
police freqs. I used to notice this real bad while going down
Wanamaker road in Topeka. I would suggest going to a triple conversion
scanner such as the BC235xlt which is nicely priced and due to some
prodding from the government, the scanner manufacturers have taken out
some of the 'slop' that was also found in some of the triple
conversion scanners.

I don't have any documentation on any modifications available for this
scanner. Since it is a dual conversion scanner made by Uniden, it
would probably allow you to listen to images or do a virtual
downconversion. It is basically a 'get what you paid for' type of
scanner. It was relatively inexpensive but got the 800Mhz band.

1. If you are a "powerful man" then a lawyer and/or a $2000 ticket should not be a big deal.

2. Next time, don't hang around areas where they are trying to arrest people. The police tend to distrust people who sit in driveways "just listening to the radio", especially when that driveway leads to a house that just happens to have criminal activity going on. We have a saying in America, "If you're not guilty, then don't make it look like you are."

3. I don't believe your story anyway.

I have looked everywhere on the internet that I can think of for the cel.mod for the 26. All I have been able to find is a mod. that says to run a jumper between 2 points on the chip. The same info. also goes on to say the cel freqs. can then be heard between 360 and 380 mhzs. What I want to know is the modifacation the one that opens the 800 band? All I can hear on one of my other scanners in the 300Mhz band is birdies, no cel. Please advise any info. in ref. to my question to my e mail add. or post it so everyone can read it.
Thanks

2695. Pro 43 modifications FAQ

Newsgroup: rec.radio.scanner
Date: 1998-01-23 00:00:00 UTC
From: gdallal@world.std.com
Message-ID: <En7pq0.2y6@world.std.com>
Source record: 172853

```
Radio Shack PRO-43 Modifications FAQ
<Last modified December 1, 1996>
<altered sections indicated by * in TOC>

CONTENTS

* 1. Introduction
* 2. Out of the box frequency coverage
3. Which units can be modified for extended frequency
reception?
4. Companies that will modify the PRO-43 for extended
frequency reception
5. The modifications
extended receive 800 MHz (original mod + solderless)
* extended receive 6-1000MHz
keypad beep delete
improved audio
attaching an S-meter
400 memory channels
extended receive (30-68MHz for European model)
* 5. Some fixes
* Unit reset
* Freeing from lockup after all banks deselcted
------------------------------------------------------------
1. Introduction

As long as there is a continuing demand for it, this PRO-43
modifications FAQ will be posted every month or so. In large
part, it is the file PRO43.MOD from pub/hamradio/mods/tandy at
oak.oakland.edu .

The FAQ now includes mods for

(1) extended receive (800 MHz:
original mod + solderless)
(2) keypad beep delete
(3) improved audio
(4) attaching an S-meter
(5) extended receive (30-68 MHz for European model)

There is also a mod for 400 memory channels, but, to quote
its author, it is very complicated, should only be attempted
by someone with moderate to advanced electronics experience,
and is not for the faint of heart or the "weekend technician."
A brief description is included at the end of this FAQ. If
the mod were included in its entirety, the size of the FAQ
```

would be increased four-fold.
---
2. Out of the box frequency coverage

30-54 MHz
118-174 MHz
220-512 MHz
806-823.9375 MHz
851-868.9375 MHz
896-999.9875 MHz
---
3. Which units can be modified for extended frequency
(800 MHZ) reception?

Note: In the United States, it is against the law
(Electronics Communications Privacy Act of 1987, public law
99-508, amended 1994 by public law 103-414) to listen to
cellular or cordless telephone communications. However, it is
not illegal to own equipment that can receive or can be
modified to receive such communications, even though it became
illegal as of April 1994 to manufacture or import equipment
that could be easily modified by the user to receive cellular
communications. Equipment manufactured before the cutoff date
can continue to be sold until stocks are exhausted. While
businesses are forbidden from importing cellular capable
scanners for resale, the question has been raised whether an
individual can legally import such equipment not intended for
resale. The issue is not explored here.

Which PRO-43 units can be modified for extended receive?
The best information is that units sold in the US and Canada
can be identified by the following scheme

Modifiable | Nonmodifiable
|
serial number no A in # | begins with A
FCC-ID AA020-300 | AA020-300A

There have been rumors that the correspondence between serial
number and FCC-ID may not be perfect, that is, there may be
some units judged modifiable by the serial number and
nonmodifiable by the FCC-ID, and vice-versa. Anyone with a
such a unit should send a message to gdallal@world.std.com so
that the information can be incorporated into this FAQ.

Date codes: Inside the battery compartment is a paper label
containing the date of manufacture in the form "month A year".
For example, 5A3 is May, 1993. The cutoff date after which
units could no longer be modifiable is April, 1994 (4A4). So
far, the earliest reported date of manufacture of a
nonmodifiable unit is 3A4 (March, 1994). There have been *no*
reports of a modifiable US 3A4 unit. However, there have been

reports of a modifiable Canadian 10A4 unit; it did not have an A in the serial number.

Until the rumors surrounding imperfect correspondence between serial number and FCC-ID can be settled, it is better to check the FCC-ID. But be careful. All units have A's in the FCC-ID. Only nonmodifiable units have an FCC-ID that ends in A.

THE PRESENCE OR ABSENCE OF A FINAL 'A' IN THE FCC-ID
IS A DEFINITIVE WAY OF DETERMINING WHETHER A PRO-43
CAN BE MODIFIED FOR EXTENDED FREQUENCY RECEPTION.
IF THE FCC-ID IS 'AA020-300', THE UNIT IS MODIFIABLE.
IF THE FCC-ID IS 'AA020-300A', THE UNIT IS NOT MODIFIABLE.

It has been reported that some units currently being made for sale overseas can be modified for extended 800 MHz reception. However, it is not known whether this applies to all overseas units or, if not, whether there is a way to distinguish modifiable units from nonmodifiable units.

The PRO-43 was produced under two brand names. My 3A3 unit carries the Realistic name; my 12A3 unit carries the Radio Shack name. At the moment, it is not known whether this represented a changeover or whether both types were produced side-by-side for a time. It is also not known whether their electronics are different.

There are no software modifications for the PRO-43. It is not possible to extend the frequency range of the radio by pushing buttons on the keypad. Such modifications are possible with other models, such as the PRO-51, but *not* with the PRO-43. The PRO-43, made by GRE (General Radio Electronics) of Japan, is one of Radio Shack's few triple conversion units. Radio Shack scanners with software mods are double conversion units made by Uniden.

Modification procedures for other radios are available by anonymous ftp from the pub/hamradio/mods/<manufacturer> subdirectories at oak.oakland.edu.

There is some debate about whether step (5) of the extended receive modification is worthwhile. According to Bob Parnass, from his "Improved Audio Mod", below:

"Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage."

So, if you trash the diode in step 4 or want to quit while your ahead, don't lose sleep over it. On the other hand,

quoting ray_reese@tscnet.eskimo.com (Ray Reese),

When I purchased my PRO-43 and did the mod for adding 54-88 Mhz, using the removed cell. diode, I wanted to be able to listen to the sound carrier for the tv channels 2-6 as well as the 72-76 Mhz band. It is worth the trouble to make the mode and it does work well in my area, despite not having the correct coils for that band area. Do the mod anyway, but [if you've trashed your original diode], use a 1N4148 fast-switching diode. Perhaps a 1N914 might do the job also. They can be found at Radio Shack for a cheap price.

---

4. Companies that will modify the PRO-43 for extended frequency reception

If you'd rather not do the modification for extended frequency reception yourself, Cellular Security Group, 106 Western Avenue, Essex, MA 01929 (508/768-7486) will do it for $40, which includes insured UPS return postage. However, CSG will not move the diode to extend the low band to 88 MHz; they only remove the diode to unlock the 800 MHz frequencies. When CSG is mentioned on the net, two types of comments follow: testimonials from satisfied customers and comments from those with the technical skills claiming that the service seems high priced for just removing the diode. But, there have been *no* reports of shoddy work or damaged radios. (They've modified two of mine.) Units are processed within 24 hours of receipt.

Grove Enterprises' newly advertised Repair Service will perform the mod for $40 plus shipping. They will move (rather than just remove) the diode in units that can benefit from it, but state that there is no way to tell whether the diode should be moved without looking inside. They claim that the determination can not be made from the serial number, FCC-ID, or date of manufacture. For further details, call Grove at 704/837-7081. In order to get a unit modified, a service order number must be obtained from the same telephone number. Packages without a SO# will be refused.

---

5. The modifications

From: armille@afterlife.ncsc.mil (A. Ray Miller)
Summary: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

A few people have mentioned the cellular mod for the PRO-43; it turns out you should not remove but MOVE the diode. Doing so allows cellular coverage as well as low band (up to 88 MHz) coverage.

Acknowledgments to Grove Enterprises; this information came from them.
They are selling the PRO-43 for $300 which is $50 less than Radio Shack.
I have no connection with them other than as a satisfied customer.

PRO-43
Cellular Frequency Restoration and Low Band Expansion

Note: It is not lawful to monitor cellular or conventional mobile telephone conversations.

The following procedure requires familiarity with microcircuit soldering and will violate your warranty. Grove Enterprises assumes no liability resulting from its attempt, nor will accept the modified scanner for return under any condition.

TOOLS NEEDED: Fine point, low power soldering pencil; solder wick or a desoldering tool; pointed awl, hemostats or pointed tweezers; small Philips screwdriver; solder.

1) Remove the battery, antenna and back cover (held in place by four screws).

2) Remove the six screws holding the top circuit board in place. Carefully unsolder the two antenna connections from the board. Bend the antenna ground tab fully up from the board. Carefully lift the board, unplugging the black connector at its base, and lay the board out of the way on its bundle of colored wires.

3) Remove the two screws from the next board and lift it, carefully unplugging the white connector at the bottom of the board. Lift it up and lay it aside on its brown wire (which can be unplugged if necessary).

4) Unsolder and remove the metal shield from the final board, revealing the microprocessor; note the row of diodes labeled D1-D5 above it. Only diodes D1, D2, and D4 are present; assisted by a pointed tool, unsolder and remove D4, the lone diode (this restores cellular frequencies which will be searched in 30 kHz steps).

5) Resolder the removed diode carefully into position D3 to extend low band coverage to 88 MHz.

6) Reassemble the boards, paying particular attention to the alignment of the plugs. Test the radio by entering any frequency between 870 and 890 MHz (cellular) and 51-88 MHz (low band).

From: IN%"savage@dg-rtp.dg.com" 2-FEB-1995 17:55:07.31

BTW, I did something similar [to the mod that follows] but MUCH easier... No soldering, removing antennas, PCBs, etc..

Just open up the Pro 43 and look down on the bottom PCB from where the batteries usually lie. You'll see the diodes there. Simply take an

xacto knife and and break the solder on the D4 diode (left-most on mine) on the side facing you. I just cut back-and-forth for a bit. Once the solder (it's surface mounted) is weak enough, I just bend up the diode a bit from the PCB. Presto. I left mine hanging on the one side with solder. If you continue to work it a bit, you can probably remove the whole diode.

--Ed

From: springel@umich.edu (Jason G. Springel)
Subject: MODing a Pro-43 without soldering

I just purchased a new Pro-43 to replace my Uniden 200XLT after reading many of the praises for the Pro-43 on this newsgroup. I decided to try and MOD it, but don't have a lot of experience with a soldering iron. After examining the scanner's innards, I found it was quite easy to "fix" with nothing more than a minature philips screwdriver and some small needlenose pliars.

********** Standard Discalimer from other MODs:

1-It is against the law to monitor cellular or mobile telephone calls.

*****2-Procedures outlined below [DO NOT] require knowledge of microcircuits, soldering and assembly techniques.

*****3-You will [NOT] need a low-wattage soldering iron, solder and other various tools to help in the procedure.

4-The following procedure will void your warranty.

****
Here is my new MOD:

Step 1

Remove the battery, antenna, and back cover which is held in place by four screws. Place the scanner keypad-side down on your working surface.

Step 2

Remove the six screws holding the top circuit board in place.

Step 3

Using a VERY small screwdriver (I used one from a Radio Shack kit), remove the two screws from the lower circuit board. Looking down at the unit, you will see that the screw on right side of the lower circuit board can be easily removed. Remove the screw on the left side by by sliding the screwdriver between the top circuit board and the metal frame which holds the two boards together.

Step 4

With these two screws removed, you can now lift the entire top panel (antenna, volume, and squelch knobs) along with the top two circuit boards as one unit. The two circuit boards will be connected to the final circuit board (the one attached to the front section of the scanner) by several wires. Simply set the top panel/circuit boards alongside the front section of the scanner and you can leave these wires connected.

Step 5

The microporcessor is located under the large metal shield on the final board (the front section of the scanner with the display and keypad). If you look under metal shield from the side closest to the bottom of the scanner, you should see the row of diodes labeled D1-D5.

Only diodes D1, D2 and D4 should be present.

Use a small pointed tool to break off D4. You actually don't have to remove it completely (unless you want to use it to restore additional frequencies as explained in other MODs), you can just lift one side so it dosen't make connection and then put a small piece of tape or heat shrink over it, so it won't. Make sure it's not lifted to high or the boards will not fit.

This will restore Cellular Frequencies in 30 kHz steps.

Step 5

Reverse the process to replace the top panel/circuit boards and the two screws that connect the lower circuit board. Replace the 6 screws from the top board. Replace the cover, etc.....

...the diode positions on the cpu board, of which only three are filled look like this. Where X equals a diode soldered in place.

D5 D4 D3 D2 D1

O X O X X Normal configuration

O O O X X Cellular modification(D4 removed)

O O X X X Lo-Band modification(D4 in D3's place)

These directions were based on an original MOD design whose origins I do not know. My thanks go out to the original author of that MOD! Hope this helps those of you who do not own a soldering iron!

PRO-43 Shortwave & Extended Receive
Al Mellon N8KLI

ification is only possible on radios able to be modified to receive the full 800 MHz range.)

Scope and nature of the modification: To allow the PRO-43 to receive frequencies from 6 MHz to 1000 MHz. This is accomplished by setting the PRO-43 to non-standard splinter frequencies, the CPU will then step the radio beyond the normal band edges. To derive the non-standard splinter frequencies

it is necessary to change the diode configuration matrix, and to use the monitor-search function. The hardware modification should take about thirty minutes. The remaining programming / search will take as little as 45 minutes (depending on how interested you are in the signals you encounter during the 806 MHz to 30 MHz search to be run).

I made a few attempts to make deals with various radio mod shops. Most felt the time needed to make key pad entries was too long to make a profit.

< This is a lengthy modification. It can be found in its entirety in /pub3/hamradio/mods/tandy/pro43swl.zip at oak.oakland.edu and at http://204.134.124.1:80/kc5kto/pro43swl.html>

From: ross@novax.llnl.gov

Here is my keypad beep delete mod for the RPO-43:

1. Remove battery.
2. Remove back cover (4 screws).
3. Remove top board (6 screws, desolder two antenna connections and bend antenna ground lead up out of the way). Be careful of black connector at bottom of board. Flip board over and lay aside (wire connectors need not be disconnected).
4. Remove middle board (remove 2 screws and wire connector). Be careful of two multi-pin connectors along underside of board. Set middle board aside.
5. Locate 10 pin connector on side of bottom board (labeled CN3). Note that one end of connector has pin 10 labeled as such. Count back to pin 6 and bend pin 6 ninety degrees towards the large RF shield. Make sure the bent pin clears the RF shield.
6. Reassemble and your done OR do the cell mod since you are so close.

Have fun. Gary Ross >usual disclaimer>

Subject: Improved audio for the PRO-43 portable scanner
From: parnass@cbnewse.cb.att.com (Bob Parnass, AJ9S)
Date: Wed, 2 Dec 1992 01:15:35 GMT

IMPROVED AUDIO FOR THE PRO-43 SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-43 scanner audio is too bassy.1 The lack of treble makes it difficult to hear the PRO-43 in noisy situations, especially while listening in a car or truck. Louis Shirley sent me a schematic and suggested I remove C341, a tiny 0.015 ufd surface mount capacitor.

I'm glad to report that removing C341 made a great improvement. The audio is now much "crisper," more like the Uniden 200xlt, although still not quite as loud. Turning the volume control up still overloads

the PRO-43's small, internal speaker, but there's less need to do that once C341 is removed.

The PRO-43 contains 3 printed circuit boards, and the middle (second) board contains the audio circuitry. Finding C341 is difficult, as it is neither marked with a value nor a component designation. It is located on the foil side of the middle board, under IC304, an LM386 amplifier IC. C341 is in parallel with, and physically next to, R350 (33,000 ohm). R350 is slightly larger than C341 and is marked 333. Both R350 and C341 are connected between pin 2 of the LM386 and ground.

A Note About 50-88 MHz Reception

Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage.

---

Subject: S-Meter for PRO-43
From: schuster@panix.com (Michael Schuster)

Found this on the Fidonet scanner echo:

=====begin quoted text=================

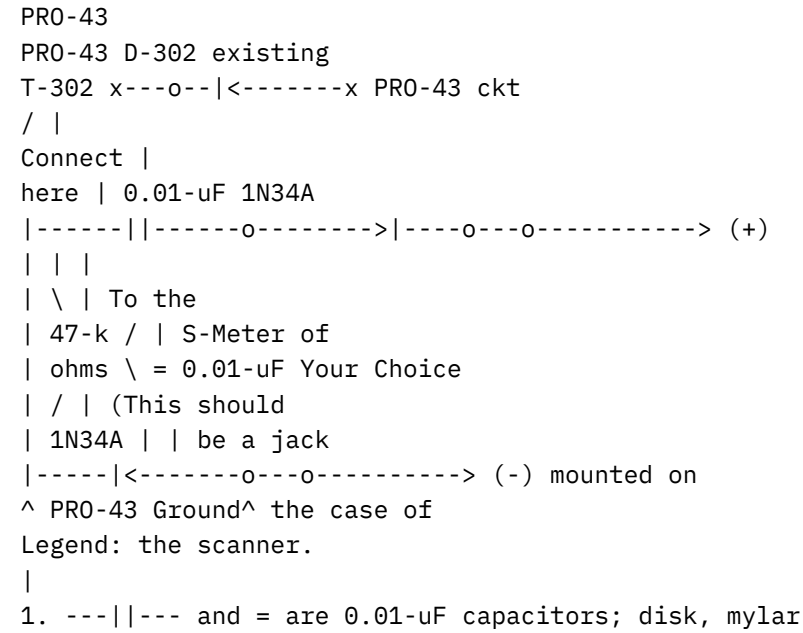
Date: 02-06-93 00:24
From: Bill Cheek
To: All
Subject: PRO-43 S-Meter!

Greetings Scanner Fans!

It had to happen! The fundamentals for an S-Meter exist alive and well in the PRO-43! Only a simple circuit and your choice of meter, analog or LED, is required for a jim-dandy S-Meter function!

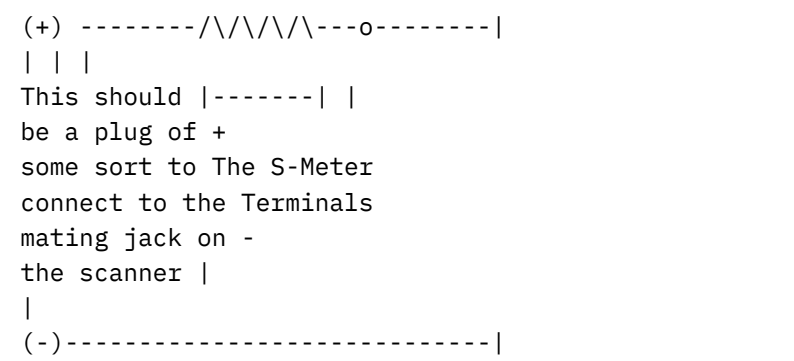
The key point in the circuit is the cathode of D-302 located on the bottom (solder side) of the AF Board (middle board). You will need the Service Manual for the PRO-43 to find it as it's not marked and it would take me 10,000 words to guide you to exactly where it is located. Call Tandy National Parts at (800) 442-2425 to order your manual: approx $10. Now here is the deal:

Locate D-302 and either build the following circuit right there on the back of the AF board in the vicinity of D-302, or solder a wire to the cathode of D-302 and route it to somewhere else more convenient to feed the below circuit. This wire ought not to be very long, though, say not more than a couple of inches. Refer to the ASCII schematic diagram as follows:



PRO-43
PRO-43 D-302 existing
T-302 x---o--|<-------x PRO-43 ckt
/ |
Connect |
here | 0.01-uF 1N34A
|------||------o-------->|----o---o-----------> (+)
| | |
| \ | To the
| 47-k / | S-Meter of
| ohms \ = 0.01-uF Your Choice
| / | (This should
| 1N34A | | be a jack
|-----|<-------o---o----------> (-) mounted on
^ PRO-43 Ground^ the case of
Legend: the scanner.
|
1. ---||--- and = are 0.01-uF capacitors; disk, mylar, monolythic, chip
|
2. --->|--- and ---|<---- are germanium diodes, 1N34A
| is cathode
< is anode
3. o means a connection, preferably soldered
4. The 47-k resistor is self-explanatory, I hope.
5. -------- and | are wires/conductors.
|
|
6. x is existing PRO-43 circuitry

If you use an analog meter, preferably a real S-Meter like salvaged from an old junked CB rig, then rig it as follows to connect to the circuit above:



You can also build the 10-segment LED S-Meter as shown in Volume 2 of my SCANNER MODIFICATION HANDBOOK, available from leading mail order radio dealers everywhere. ISBN 0-939780-14-3 published by CRB Research Books, Inc. Commack, NY.

After connected and working, locate the PRO-43 very near a known strong transmitter, perhaps a ham transmitter, a police cruiser, your favorite security guard's handheld or right next to a cordless telephone, or anything else known to transmit a strong signal. Tune the scanner to the frequency, and adjust the 5-k trim pot above so the meter reads exactly full scale. All other signals will read proportionally lower to yield "relative signal strength" measurements! A hell of a circuit here, boys & girls! Have fun!

Subject: PRO-43 w/400 CHANNELS HERES HOW!

IT IS NOT FOR THE FAINT OF HEART however.

PRO-43 ENHANCEMENT
MEMORY EXPANSION & "FADE-AWAY" LIGHT
Brett Bennett 4/12/94
bbb@kuhub.cc.ukans.edu
Copyright 1994 B&D Electronics All Rights Reserved

INTRODUCTION

The following document details two enhancement modifications that are possible on the Radio Shack PRO-43 scanning radio. The first modification doubles the factory standard memory capacity, allowing you to enjoy an additional 200 channels of memory, plus 10 more monitor memories. After completing the first modification, it is a fairly simple matter to add a 7 to 10 second delay feature to the LCD back-light lamp circuit. I designed and performed these modifications on my PRO-43 and they do work. As I understand it, there (has been/is being) presented in WORLD SCANNER REPORT a similar memory expansion. I have not seen this modification and for all I know it is a better way of doing it. What is presented is a 'clean-room' design of my

own that to the best of my knowledge is the only one to also offer a time-delay for the LCD back-light. Having said that, let me say:

I ASSUME NO RESPONSIBILITY FOR ANYTHING THAT MIGHT HAPPEN TO YOUR RADIO SHOULD YOU OR ANYONE ELSE ATTEMPT THESE MODIFICATIONS. WHILE REASONABLE CARE HAS GONE INTO THE PREPARATION OF THE FOLLOWING DOCUMENT, I CAN NOT GUARANTEE THAT THERE ARE NOT ERRORS.

The procedure described below is very complicated, and involves the soldering and desoldering of very tiny components and the cutting of printed circuit board traces. While the procedure is not irreversible, it will leave permanent scars inside your scanner. It should only be attempted by someone with moderate to advanced electronics experience. I don't think it should be attempted by, to quote someone else, a "weekend technician." If as you read through this you feel intimidated by the jargon and required procedures or if an electronic schematic looks like a strange piece of modern art to you, then this might not be the 'mod' you are looking for. The following document will assume you have obtained the materials listed below, especially the Service Manual, and you have studied the circuit in some detail. I will not describe in great detail where every component is or where every solder point on the logic board should be placed. Having the Service Manual, and having studied the drawings therein will allow you determine to where it is I refer.

REQUIREMENTS

1 - PRO-43 Service Manual. (Tandy Parts # MS-2000300 - approx. $6.00)
1 - CD4053 - Triple - SPDT analog switch - Surface mount package (DigiKey #CD4053BCM-ND - approx. $1.50)
2 - 93C67 EEPROMs (Tandy Parts # MX-8050 - approx. $13.00/each)
1 - 100k x 5 resistor network. Common lead type. (DigiKey # Q5104)
1 - UN2111 PNP transistor (Q1 on Logic PCB. Tandy Parts #)
1 - 1 uF 16v capacitor.
1 - 10 MOhm 1/8-1/16W resistor.
Misc.:
Wire wrap wire-30 gauge. (Radio Shack)
Grounded soldering iron with approx. 1/32" tip or smaller.
Desoldering Equipment.
Digital Volt Meter. (Used to double check your VCC and Ground connections, pre-check switching assembly)
Utility knife with fresh sharp small blade. (Needed to cut traces.)
Strong hand held magnifying lens. (Needed to check solder joints.)
+5-10 Volt bench power supply. (Used to check switching assembly.)
Anti-Static work place and grounding wrist band.
Very fine needle nose pliers, wire cutters.

From: IN%"millingtoj@oldhamlrd-po.oldham.gpsemi.COM"
"John Millington" 17-DEC-1995 04:55:31.71
Subj: RE: pro-43

The European Pro-43 comes with a diode in D1, D3, +D5.
Remove the diode from D5 and solder it in position D2.
The scanner will now cover 30-68Mhz.

Usual disclaimer.

---

6. The fixes

Unit reset (from the owner's manual)

If the keys do not work and the display is random, while
holding down the CLEAR and 0 (zero), turn the power on to
reset the scanner. Note: This clears all the information
Stored in the scanner.

From: IN%"randyrho@nauticom.net" "Randy Rhoades" 14-NOV-1996 00:13:32.24
Subj: Pro-43 Lockup Fix

Several months ago, the unit "locked up". When the radio was turned
on, nothing appeared on the display but the light button worked.
<RS repaired it, snipped>

It happened again.

<RR reports . . . [Before doing this, first try the reset above. GED]>
The problem seems to be in the software. The PRO-43 seems to forget
how to operate if all banks are de-selected. The software prevents
the operator from deselecting all banks but on rare occations this
routine fails. There seems to be no way to recover from this without
surgery. If you know any other way, please let me know.

THE FIX

There are lots of mod articles around describing the disassembly of
the PRO-43 so I'll omit it here. Disassemble the scanner down to
the CPU board and remove the metal shield. CAREFULLY lift pin 3 on
IC 2 so it no longer makes contact with the circuit board trace.
Reconnect the radio module to the CPU board, hold the back cover
in place, and insert the batteries. Turn on the power. The display
will look a little odd, but it will be apparant that the unit is
scanning. Press the number 1 on the keypad until the scan indicator
on the display shows band 1 is operating. Turn off the power and
disassemble the scanner again. Re-solder pin 3, replace the shield,
and reassemble the scanner. It's fixed !

The only trouble with the procedure is that all of your programmed
frequencies are dust. Just reprogram and thank God it works again.

: -> Interesting. F&G currently has their own system on VHF-Hi, if memory
: -> serves - do you know if they plan on moving everyone up to 800 MHz?

: Parks and Rec. already are on an 800 system, I'm pretty sure that's
: where F&G will go. It's easy to add new talkgroups and even freqs if
: necessary. Having multiple agencies sharing a system makes it easier to
: communicate across agencies in an emergency.

That's sort of what I was suspecting would happen. But if my memory serves (only a 50/50 chance of that 8*) the P&R operations weren't trunked. I can't verify their data (haven't listened to P&R), but it seems to me most sources indicate that they use conventional 800 MHz systems with a single freq assigned to each region. Except for topological problems, it probably wouldn't be hard to pool and trunk the freqs...

There have been some hints here and there that the state was going to go to a statewide trunked system - I think there were three freq schemes - one for the North, one for the South and one for the Border region, and my impression was that there was going to be a massive migration of statewide resources to the new 800 MHz system --- I don't have the info handy, but I'm rather sure it was a different pool of freqs than P&R are using.

The system probably will work well, until an earthquake or freak El Nino storm wipes out the control freq and all these many agencies are forced to share the same fallback freq 8*(

Reminds me of the time I was participating in an EOC conference for an unnamed campus (shortly after a very big quake) - we toured the building that was to be used as ground zero, and at some point someone pointed out that the 'Logistics Room' only had jacks for three phones. The official response (from someone who SHOULD have known better) was 'Well, we plan to use cellular phones for the other op positions...'

Greetings,

After reading the posts on this forum, I have come the conclusion that there are a few bad apples in the barrel. Behaving like little children in a sandbox is not a mark of chivalry.
Perhaps Mr. Cheek is just defending his honor. Of all the participants in this discusting display of childish behavior, Mr. Cheek is the only one making a positive contribution to the scanning community. At least Mr. Cheek takes the time to answer scanning related questions and help people. This is not to say I condone his conduct in other matters. I do appreciate what Bill Cheek has done for the hobby.
You people need to grow up. Get a life. Leave you computer alone and go out and socialize a bit. Perhaps real face to face relations with live people will accelerate you maturation process.
This forum should be about scanning, not the petty mental problems of a few participants lacking in self esteem.

Respectfully,

Colin Thompson

Of course, you could always buy one from radio shack for $199 if you
hurry. The logic board allowing cellular can be obtained from javiation
later for around $150 if you like, or there are other ways to get cellular,
or you may not even care about cellular.

Hmmm, I wonder what the word proprietary means in your dictionary ?

ICOM owns the rights to the .ICF file format and they obviously do not
desire to release it.

To operate TRUNKER V3.x you need the data from the control channel to
appear on the CTS of COM1.

You will still need the data interface for TRUNKER as the computer
connection does not provide the control channel data stream.

Just by having a new call doesn't mean the man has little experience or knowledge of radio or electronics. It just means he has a new call sign. I know quite a few locals, degreed (something you know nothing about) engineers, mind you, with new licenses that were licensed twenty or more years ago. They are definitely *not* inexperienced.

Remarks like yours quoted above shows just how ignorant you really are Toilet Boy.

The question regarding your (lied about) degrees began at the same time you started demanding proof of Bill Cheek's credentials. You've sizzled so many brain cells over the years with massive doses of Prozac that you can't remember five minutes ago, let alone two years ago. I'm not surprised that you would "conveniently" forget that I, and many others, had posed the same questions to you years ago. You can try to "conveniently"
forget so you can weasel out of backing up your claims, but there are way too many people who won't let you forget.

> In other words, you have been caught in your own lie!

Try again loser. Your long term memory, like your personality, is faulty. Go buy the novel to the Mr. Bean movie, it should keep you amused for weeks. Look for the special Toilet Boy large print edition and don't read the book in a large wind. Since you move your lips when you read, you might chaff them and your Phony AR Goon Ball buddies might not like the scratches when you fellate them.

Mine works fine. Although i don't use it that
often. When you want to find a freq, it's handy
to have. Ask yourself, is it worth $400 to find
new freqs? you could buy another scanner for
the money.
If you're going to get one, just be aware of the
limitations of the Scout. It will only record a NBfm signal. It's most
sensitive with the telescoping antenna, but not as easily concealed.
It's least sensitive with the DB32
antenna, but will slip easily into a pocket.
Range depends on the antenna you're using
on the Scout and the output power of the
transmitter you're trying to catch.
Hope that helps a little.
Steve,

I'm in a highrise in a city. I found by putting the flex antenna on a 75ohm bnc cable out
the window, I get aalot more freqs.

I probably want something I can just put out the window for the night, then bring back in.

Recommendations on wire? (any with bnc on already, as in Radio shack?)

and antenna for 800/900 mhz that will also do other freqs,

Also, can the wiring in the building be used as an antenna? I tried hooking wire to the switchplate screw (grounded) but got poor results.

PRO-2026 Mobile Scanner MODEL # 20-148 (no letter suffix) Serial #
35000629

NEW - IN BOX, NEVER USED.

This scanner is probably the last you will ever find new - in
box.

It has been stored since 1993 and only opened once to take
photograph and check date code and serial
number.

It is esily modifiable to receive CELLULAR PHONE FREQUENCIES. All
you need are a pair of snippers
and a Phillips screwdriver.

Here is the official Radio Shack descripion of this PRO-2026
copied form the owner's manual (c 1992
InterTan Canada):

"Your new Realistic PRO-2026 100-Channel Mobile Programmable
Scanner lets you in on all the action!
The PRO-2026 gives you access to more than 30,000 frequencies
used by police departments, fire
departments, ambulances, aircraft, ham radio operators, and
transportation services. You can store up to
100 frequencies into your scanner's channels, and you can scan
and change your channel selection at any
time. The secret to your scanner's ability to scan so many
channels so easily is its custom-designed
microprocessor - a tiny, built in computer. The microprocessor
also gives your scanner these special
features:

SERVICE SEARCH, TWO-SECOND DELAY, LOCK-OUT FUNCTION, FIVE MEMORY
BANKS,
PRIORITY CHANNEL, MONITOR CHANNEL.

This scanner officially scans the following frequency ranges:

29-29.7, 29.7-50, 50-54, 108-136.975, 137-144, 144-148, 148-174,
406-420, 420-450, 450-470,
470-512, 806-823.9375, 851-868.9375, 869.1125-956 MHZ.

Here s thedirectlick to my scanner on EBay with nice picture:

You better go look at the headers info, it CLEARLY did NOT come from me
as you would notice by looking at the path, nntp posting host, &
x-mailer type.

On the other hand if you were that good at analyzing you would have
known
to do that so you probably don't have any idea what you are doing.

Cody,
With the Pro-28 scanner, the best option is to take the output
from the headphone jack. Before I go any further on discussing on what
all you need, you will need to decide what recording medium that you
will want to use.

STEREO
You mentioned recoding on the stereo. Yes, you can do this quite
easily with a tape deck. The biggest problem is that the tape deck
would continue to record while the scanner is quite which would be
thought of as wasting tape. There are also voice-activated recording
tape players and devices that activate a regular tape player once
there is something that comes up on the scanner. Going this route
could cause you to shell out a bit more money than what you paid for
your scanner. There are some other options though...

COMPUTER
If you have a soundcard in your computer that has a LINE-IN jack or a
MIC jack, you should be able to get some software up and running that
will do the same as a voice-activated recorder. There are a few
programs (shareware/freeware) that turns your computer into a VOX
(voice-activated recorder). It records all of the transmissions to a
.wav file and some of the programs have even more feature enhancements
like time-stamping, logging and DTMF decoding. The two programs that I
am familiar with are WinTone and RecAll. You can find these programs
at the following links:
http://www.steaksandwich.com/
http://www.sagebrush.com/~sells/

For recording from your Pro-28 to the soundcard, you will need the
following or some variation of. The headphone jack will be a 1/8th
inch MONO jack. The MIC or LINE-IN on the soundcard will be a 1/8th
inch STEREO jack. I would try to find a audio patch cord that is about
6ft long that has a 1/8th inch MONO plug on each end. Then find a
1/8th inch MONO to STEREO converter. This will allow you to plug the

other end of the cable into the converter and the converter into the soundcard. I would suggest that you try to use the LINE-IN if at all possible. You will have to fiddle with the scanner's volume and the soundcard's recording volume until you have satisfactory levels.

If you like one of the programs then send in the money to register it. If you want to record the .wav file to a tape deck later, then you will just have to get the appropriate connectors from the REC OUT of the soundcard to your stereo. This way you won't have the wasted tape and the recording programs are just a "click" away.

>and send it to me. I'm willing to pay for copying and shipping.
>Thanks.

I made a user's manual that is VERY close to the original one put out
by Uniden. It is in MS Pub95 format. You can find the zipped file at:
http://homepage.netspaceonline.com/~wiggie/Images/bc200xlt.zip
You don't have MS Pub?...well, you can download a trial version from
Microsoft at:
http://www.microsoft.com/publisher/trialreg.htm
Download the file and unzip it. Load it up in MS Pub after you have
downloaded/unzipped/setup that program. When you print it out, use
legal paper (8.5x14"). Print out page one, turn the page over and
print page two. I will only keep it on my webpage for a bit
longer...so please take advantage of it now!

Sorry John.......But the writing is similar. Are you doing OK? Is there something "offline" causing you trouble? Do you find yourself snapping at the people close to you in your life? Has your family brought your irratability to your attention? This is a tough season to cope with personal problems. There's a type of depression that surfaces on a seasonal basis. Oregon would be prime territory for this type of depression.

Okay John,.....take a deep breath and concentrate. I'd like you to relax and listen very carefully. That's right,....just close your eyes and listen.....John....I'd like to speak to "RADIO FAN!" now....can you let him talk to me John?

> Grove beam for this type monitoring?

On the 800 band, the 3 or 4 inch antenna that comes with it does fine as long as the signal doesn't have to travel through too much structure. I noticed in a wooden frame house, the second and first floor above ground level was sufficient for receiving on the 800 band. Once you take it below ground, or into concrete and steel structures, the reception goes to hell.

I've got my scanner in the basement, and I receive the 800 band fine through a 50 ft cable to the cheap RS scanner antenna on the roof. If you're just looking for the 800 band, this should work well for you.

Steve,

Bad news....

The city of New Orleans and all Public safety communications are on a GE
EDACS Trunked radio system which is very hard to monitor.

The trunktracker scanners will NOT work on this system.

Your best bet will to have a very fast scanner with Sound squelch.

Good luck.

-Lb

This may help you with your question.

Using TV Antennas With Scanners
by Richard Kendrick CET, N7NT
wa7twi@primenet.com

Finding and obtaining suitable antennas for general scanner use has been a hot topic for a long time. Television antennas have been suggested many times, but, there has been a storm of controversy over its suitability for scanner use. This article will attempt to show that television antennas can be a reasonable choice as an all purpose directional antenna for your scanner station.

Television antennas come in a variety of sizes and designs, with an equally wide variety of specifications. This diversity can cause confusion for the scanner listener trying to sort all this information and find a suitable antenna to use. The number of elements and what frequency range to buy are probably the two most common questions.

Generally, the more elements on an antenna, the better the performance. If the stations you are trying to hear are more than 25 miles away, the larger antenna arrays would be a good choice.

The frequency range of an antenna you choose depends on what you want to listen to. You can buy antennas that cover the VHF channels only, UHF channels only, VHF and UHF channels, and some even include the FM standard broadcast band. It will help to define exactly what is meant by VHF, UHF, and standard FM broadcast bands in the context of frequency.

The frequency assignments for the television band is not a continuous span. The VHF range is defined as channels 2 through 13. Channels 2 through 6 cover the 54 to 88 MHz range and channels 7 through 13 span 174 to 216 MHz. Sandwiched between channels 6 and 7 is the FM broadcast band covering 88 to 108 MHz. Channels 14 through 83, the UHF range, is 470 to 890 MHz. In

recent years, the spectrum covering channels 70 through 83 have been reassigned to the Land Mobile and Cellular Services.

Most TV antenna designs are based on the Log Periodic Dipole Array (LPDA). The LPDA is similar to a Yagi in construction and appearance, with the main difference in the elements and how they are connected. The LPDA has a series of progressively smaller "active" elements placed on a boom with the longest element on one end, and is a half wave-length at the lowest frequency. The shortest element is on the opposite end, and is a half wavelength at the highest frequency of interest. The small end is pointed towards the target transmitter.

The chief benefit of the LPDA is the wide frequency range that it can be operated. Typically, the antenna can be used over a range of frequencies having a ratio of 2:1 or higher. Over this range its electrical characteristics - feed-point impedance, gain, and front-to-back ratio remain more or less constant. This is not true, however, of the Yagi type of antenna.

For the LPDA to be useful as a TV antenna, it actually needs slightly more bandwidth above and below the standard TV channels. That additional bandwidth, or overlap, can be utilized by the scanner listener to squeeze just a little bit more frequency coverage from the antenna than the designers originally envisioned.

Think of a TV antenna as a device that covers three frequency ranges. The ranges are nominally 54 to 108 MHz, 174 to 216 MHz, and 470 to 890 MHz. Depending on the actual design, the lowest range covers approximately 50 to 112 MHz, yielding a frequency ratio of 2.24:1. Since the center range has a ratio of 1.24:1 it typically would cover a much wider range. By keeping the 2.24:1 ratio, we could expect a frequency range of approximately 120 to 270 Mhz. Design tolerances would probably fill the gap between 112 and 120 Mhz making this range useful as well. The highest range has a frequency ratio of 1.89:1. Going with the 2.24:1 ratio, would give a useful range of 420 to 940 MHz.

The last criteria that must be addressed is the orientation, or polarization of the antenna. TV antennas use horizontal polarization and the type of stations scanner enthusiasts listen to have vertical polarization. Horizontal polarization is where the antenna elements are parallel with the surface of the earth and vertical polarization is where the elements are perpendicular to the surface. TV antennas are designed for horizontal polarization and must be modified for scanner use.

Fortunately, the modification is very simple. Most TV antennas use square tubing as the boom. Locate the two mounting holes for the u-bolt clamp and drill two 9/32 inch diameter holes 90 degrees away from the existing holes. Be sure to keep the same

center to center spacing so the clamp will pass through the holes comfortably. Depending on the antenna you chose to modify, you might have to move the location of the mounting holes forward or backwards one or two inches to clear an element or the feed system.

The balun transformer that usually comes with the antenna will still be used. You can use 75 ohm cable without significant degradation of performance. You can use a 6:1 balun and feed the antenna with 50 ohm cable also.

So this gives us a single antenna that offers a reasonable cost to performance trade-off for the scanner listener. You get high gain, good front-to-back performance, directivity (using standard inexpensive TV rotator systems), and wide frequency coverage. Obviously, not all antennas available will perform this ideally, but many will out perform these simple calculations.

2751. Reception Mystery

Newsgroup: rec.radio.scanner
Date: 1998-01-24 00:00:00 UTC
From: Mad Scanner <madscanner@hotmail.com>
Message-ID: <34CAE2E8.4575@hotmail.com>
Source record: 172660

I recently connected a Realistic PRO-2006 scanner to the discone antenna Rat Shack sells. The antenna is mounted on a mast atop my second story roof, connected to the scanner via ~75 feet of times microwave systems LMR-400 coax. (HRO nerd and a few others said this stuff was better than the thick RG stuff I was after.)

My problem is that reception is now filled with a great deal of noise (as in there being less signal), IF I have the attenuator on the back of the scanner set to -0 dB. Strangely, if I flip it up to -10 dB, then the noise disappears, in addition to weak signals then being receivable.

What could be causing this? Is the scanner being overloaded with signal? I recall a similar phenomenon with an old ham radio I had at one time; when the local neighborhood jackass keyed his 1,500 watt radio up to reach -- of all things -- a local repeater, all reception on other frequencies dropped in strength and was filled with white noise. I'd then have to bring down my RF gain in order to hear the desired signals again.

Since I live in Southern California, overload is my primary suspect. However, how would I go about locating the offending signals, and finding something like notch filters to kill them off? Assuming there are other things that can cause this, I'd appreciate feedback on them as well.

Thanks guys!

I took a typical discone and took off the long radials that angle down and put the small horizontal ones and put them where the long ones were, instant 800mhz antenna and works better than most. If your discone has the center vertical, take that off also.

Have the following for sale at prices listed. Will consider trades for SW radios, base scanners, ham gear, accessories, or antennas. Let me know if you want to order or if you have any questions.

Radio Shack PRO-2026 Mobile/Base Scanner-
-100 memory channels (5 banks 20/bank), delay, built in speaker, 1 priority channel, lock out, volume, squelch, 1 monitor channel, 1 touch weather, marine, fire, air, and police bands
-comes with original box, home stand, mobile mounting bracket, power cord, and manual
-covers 29-54, 108-174, 406-512, 806-956 MHz (minus cellular)-Have heard that the 2026 can be modified for full cellular through a modification and a possible keypad trick
-Good condition, $150 Shipped

Cobra Trapshooter 3 Radar Detector-
-city feature, mute, built in speaker, volume control, dim(mer), signal strength lights, alerts you with sirens and lights, detects X, K, and Ka band radar
-photocopy of manual, windshield mounting bracket, cigarette lighter power cord
-Excellent condition, $40 Shipped

Cobra HH-35WX Handheld (HT) CB/WX Radio-
-40 channel AM, low battery LED, LED channel display, variable RF power (1 or 4 watts), full 4 watt RF power, channel selector, volume, squelch, 3 NOAA weather channels, built in speaker and microphone
-comes with "rubber-duckie" antenna, cigarette lighter power cord, full set of rechargeable batteries, manual, wall outlet charger/power cord, and the original box
-Excellent condition, $45 Shipped

Of course, not knowing the area you're in makes a definite answer to
finding a tac freq a little tough, but one place you can try is to take
a look at your local animal control, parks/recreation or local
government freqs; during the nite some police depts will use these as a
'tac' channel. For example, sometimes Howard County Md. uses
155.82-nominally a parks/recreation channel - for a tac frequency.

instead, why not use CTCSS ??

many scanners nowadays come with CTCSS. set CTCSS and you don't hear
anymore interference.

Pete,
Try the Manitoba Scanner Directory for local freqs. It's
available at some Radio Shack stores, or at 40 Channels
on Logan Ave. here in Winnipeg. As for Canada-wide
freqs, I've found the Betty Bearcat Frequency Directory
(Canadian Edition) to have good general information.
As for where you can get it, try looking in Popular
Communications magazine. It may be out of print, though.

The CTCSS option doesn't always work as you describe. There aren't may handheld CTCSS units available. CTCSS would help quite a bit in some cases....but, if you are wanting to hear a freq. on 800Mhz that does have CTCSS and there is a cell image sitting right on top of that frequency or very close nearby...you are still going to hear that image/interference no matter what. Now take it that most of the newer scanners with CTCSS are triple conversion, it is the triple conversion portion of it that is rejecting a lot of the images/intermod that is causing the problems in the first place. Then there is the fact that most of the freqs that you are going to be listening to do not always have the CTCSS tones.

The Relm HS200 has CTCSS, but it is only dual conversion. It is supposed to be better with interference/images than what a BC230xlt is but there is quite a bit of difference with a good triple conversion scanner. Right now if you are going to shell out the money, I would suggest looking into a BC235xlt for a handheld or a BC895xlt for a base unit. This would help you out considerbly in the 800Mhz range and also give you the TT options. The 895xlt does have the CTCSS option and is triple converion.
The main point that I was trying to make before I started to ramble on was...CTCSS is not going to make the interference go away. It has the capabilities to improve some situations, but if the freqs that you are monitoring do not have CTCSS tones, then it is irrevelant. Also if using CTCSS, if it opens up on a certain freq with the correct CTCSS tones, if the interference/images/intermod exists there....then it is still gonna exist there, CTCSS or not.

2785. Signals/Codes for Mercer Co. NJ?

Newsgroup: rec.radio.scanner
Date: 1998-01-24 00:00:00 UTC
From: csink@pluto.njcc.com
Message-ID: <34ca1178.456357@news.njcc.com>
Source record: 172695

Hi all-

First I'd like to say thanks to all those who helped me with my choice of a new(first) scanner. I got the Pro-26 if anyone is interested.

Anyway....armed with more frequencies than I could shake a stick at I'm picking up quite a bit. What I don't have is a list of the codes that the police/ambulance use. I have some that are listed as "State Codes" but I think some or all that are used in my area are not the same. Can anyone help? My areas:
Lawrenceville
Trenton
Hamilton Township
Princeton
Mercer County New Jersey.

Thanks!

Christopher

Use tape record or headphone jack. ACARS is an 'AM' and does not need
the discrimitor out. Run the 2006 with squelch OPEN so none of the
data burst is lost.

NEWS FLASH!!!

It is now well known that Johnny Mackey's 20-yr
span of severe, debilitating migraine headaches
has come to a sudden and dramatic cessation.
But in the words of the immortal Paul Harvey,
here is "the rest of the story".....

Seems that our good man Mackey suffered utterly
horrible headaches for the last twenty years.
He went from doctor to doctor and clinic to
clinic seeking relief that did not come. No one
had any answers; medications had no effect.
Exploratory surgeries offered no clues.

Finally, Mackey heard rumors of a miracle
doctor down in Mexico who could cure headaches.
Spending his life savings on a bus ticket and
travelers checks, Mackey headed down into the
bowels of old Tijuana, Mexico, to see the legendary
miracle doctor.

The doctor went over Mackey with a fine toothed
comb, from head to toe....and after a few days
of rigorous testing, he declared to Mackey that
while he couldn't find the cause of the headaches,
he *could* definitely cure them once and for all.

He explained that somehow the issues were centered
in Mackey's reproductive system and that castration
was the ONLY way out. At about that time, a monstrous
migraine hit Mackey with such force that he readily
agreed to the surgery on the spot. "Anything!"
declared, Mackey, "Anything to relieve this pain!"

Castration was summarily performed on the spot,
and within minutes of coming out from the anesthesia,
Mackey declared that he couldn't remember feeling
so good! The headache was truly gone! What a feeling!

Mackey returned to Oregon, euphoric, elated and so
inspired that he managed to get a decent job on the
first try.

Prosperity and happiness looming for the first time in his life, Mackey decided that the first step for his "new life" should be to buy a whole new wardrobe from head to toe.

Shopping in one store, Mackey decided that new underwear were in order, too, so he asked a grizzled old salesman for size 34 BVD's. The salesman, having been around for a long time, looked quizzically at Mackey's humongous midsection and politely suggested that size 54's would be much more appropriate.

Mackey huffily declared that he'd been wearing size 34's for twenty years and there was no damn sense in changing now. The wise old salesman scratched his chin for a moment, and casually replied:

"Well, now son, that may be true, but don't you know that wearing too tight underwear causes headaches?"
.

I tried to look up a frequency for my towns police TAC channel on the FCC's lookup page

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

I received the following error. Does anyone know why it is not accessible?

"The information you requested is not currently

publicly accessible. Please Try Again."

Also, I know I have the right frequency, but it does not show up on any

database and certainly not in "Police Call" 1998 edition. Why?

I know it is not an image.

No, Shitbag, it doesn't! The issue is empirical, not
theoretical. It is easily replicated by anyone. Stick
a freq counter on Pin 14 of the MC145158 chip and then
see for your own damn self.

> This is commonly known in the field as "stray capacitance" &
> can make a big difference sometimes.

Don't lecture me on what you know nothing of. But
you were right in one sense: SOMETIMES. Just not
this time, you flippin imbecile.

> You indicate the adjusting side of the trimmer cap is at ground
> potential, this would then make the metallic tuning tool (as you suggest
> using in the oscillator circuit) grounded. Thus, it would act as
> some form of an antenna for the stray capacitance.

Are you stupid? A grounded tool on a grounded plate
does absolutely nothing. But in this case, the issue
again, is empirical - not theoretical. It takes less
than a minute to find out, FartFace.

> If you would like to find out about "stray capacitance", let me know
> & I will tell you where you can find some articles & other information
> on it.

Geez.....just DO the procedure and find out
for your own wretched self. You don't have to tweak
anything - just attach a counter at that buffered
output, and insert any metal shaft into the hole. The
frequency will NOT change, Ignats.

You are one dumbass, Smacksie-Baby. Don't play the
theoretical games with me when empirical evidence
says different. Just DO it and see for yourself,
or do you even own a frequency counter and a PRO-2004.

PRO-2005, or PRO-2006?

Pack sand, nitwit.

When I was a kid, I had a shortwave radio I built from Radio Shack.

I used to pick up a station that would transmit the time from a federal agency in Fort Collins, Colorado.

It would tick, tick, tick.... and then say something like "At the tone, 10:07 Greenwich Mean Time.."

Does anyone have the freq for such a station?

Thank You

> Lawrenceville
> Trenton
> Hamilton Township
> Princeton
> Mercer County New Jersey.

Here's something I scribbled on Hamilton (please feel free to correct me on anything incorrect):

Hamilton Township, NJ Frequencies

Police
F1 = 453.525 - main dispatch
F4 = 453.225 - Countywide mutual aid
F5 = 453.375 - Trenton's Old system main dispatch (now simulcasts the new system)

Cars are the lower 700's (up to about the 750's). Some of the higher numbered cars are actually undercover seized cars.

Badge numbers run from the high 100's to the 300's.

Sierra-# is a supervisor.

Alpha-character-# (Lima-7, Charlie-4) are either higher-ranking officers or detectives.

10-2 - Meal stop
10-8 - In Service (not on a call)
10-14 - Non-custody transport (give somebody a ride)
10-19 - Respond to Headquarters
10-20 - Current location
10-97 - Out on scene
Code 100 - sudden or unattended death
340 - unlicensed driver

450 - DWI
Wrecker-on-call - they take the next wrecker company from the approved list

EMS
Fire-1 = 154.430 - the main pager and dispatch channel for EMS and Fire
EMS = 155.385 - the main frequency used by responding ambulances in Hamilton
HEAR system = 155.34 - used to call into hospitals

Squad 11 is Nottingham (Paxson Ave. Extension)
Squad 13 is Rusling EMS (new building on Olden Ave)
Squad 19 is Groveville EMS (at Groveville Fire)
Ambulances identify as Squad-# (11-3, 13-2, etc)
Paid ambulances are 785 and 786 - they respond during the day, as backup to the squads at night, and as extras on holidays or emergencies
79x is the Lifemobile series - from Helene Fuld
County Central - counties centralized dispatch for lifemobiles and fire

Fire
Fire-1 = 154.430 - the main pager frequency
Fire-2 = 154.295 - non-Hamilton fireground
Fire-3 = 154.355 - Hamilton fireground
Fire-4 = 154.265 - I've only ever heard it for Operation Santa Claus

Trucks identify as type/number. (Engine 16-1, Telesquirt-16, Ladder 13-2)
Chiefs, deputy chiefs and captains identify as "Chief 16" or "Captain 16-2".
At fireground, the officer in charge is "location Command" ("Wilbert Command"). The officer in charge of the building interior is usually called "Interior Command" or "Operations".

> yourself (like NOW), you resort to your little
> pompus-boy name calling (like NOW)!!!!!!!!

I don't have anything to defend, LiverLips. And
I am not backed into a corner on anything.

And at the risk of redundancy, I will reiterate that
I am not calling you "names", PimpleButt. And I am
not joking or playing with you.

What does it take to get you to understand that I
view you like a pile of dog droppings? I mean, what
does it take for me to convey that there is nothing
you can say or do that has any unchosen impact on me
and my Life?

Take you, ferinstance.....you like to call everyone a
"fool" or an "idiot". That upsets some people. It doesn't
matter what you call me or say to me. You are an utter
absolute zero, Smacksie-Baby.

I kicked your sorry arse off the Fido SCANRADIO forum,
and I'd kick your sorry arse off here, if I could. But
since I can't.....and I accept that.....I'll go to any
extent to try to convey to you that in my estimation,
whale shit is a lot higher than you.

How can I be any clearer at letting you know where
you stand in the great scheme of things?

Oh....heck, I am going to slap you back on my Shit List
one of these days soon.....but that's for reasons

altogether different and not germane to this thread.
For now, it would be well that you just try to understand
your relationship to dog droppings. I mean REALLY try to
understand.

You're not going to "run me off", Smacksie. You're not
going to wreak any havoc and revenge against me for kicking
your sorry arse off FidoNet. You're not going to influence
anyone against me. Or.....if you do...then I'll be the
first one to thank you for saving me the time and trouble.

You really have no influence in my Life other than what
I care to share with you for here and now....and the best
that I can share is to compare you to some extremely low
pile of dung....except THAT does grave injustice to all
other legitimate piles of dung on this old planet.

I just can't tell it any clearer, SphincterLips. Why can't
you understand that you are of no value...to me or to anyone
else, including yourself?

Eh?

Ref: Rumored upgrade for PCR1000...

I have been wondering just why they didn't have that
included in the original? Its a natural with the PC memory
available it could very well be an outstanding DSP unit.
Its a great unit as it is...really fine AM radio quality and
sensitivity...I haven't seen anything this great on AM
since the GE efforts of a few years ago. I've been
totally impressed with this radio! Hooked to a good
longwire or sloper, this thing really pulls things in!
I'm currently using a good Alpha-Delta sloper and
it is strong from 900mhz down to the AM band...
...surprising!

Leonard...

P.S. If anyone decides to get this radio and wants to
know what PC equipment is "RF/EMI quiet"...I
have a few suggestions...I've played around a bit
with this issue...you can "whip" it! The average
PC out there is terrible regarding RFI/EMI radiation
from within, not to mention the gross CRT radiation.
At this stage of development, you wouldn't want to
have the radio inside the cabinet! The ICOM is an
external, well shielded unit. Good move by ICOM!

Others have already posted the freqs, note that WWV is in Colorado and WWVH is in Hawaii, you will hear one or the other or both at times, since they are both EXACTLY on the same frequency their is no hetrodyne between them. Hawaii is a womans voice, Colorado a mans. By the way the voice for the time and station I.D was recorded by TV News personality Mike Wallace, although it may have changed, that was 15 years ago.

There is another transmitter located in Colorado on 60KHz which is WWVB but you need a VLF receiver to hear it.

> greatly appreciatted.

The Law as far as I've seen in Canada relating to scanners is that you can listen to any UNENCRYPTED transmissions as long as you do not devulge any information you overhear. there is a fuzzy area in cell phones because the law also says you can't listen in on a telephone... so what the courts still have to decide is if a cell phone is a telephone OR a radio... but as for digital, it is considered to be a form of encryption therefore the governement has made it illegal to decipher and listen to it. It's real borring here in Calgary, Alberta now that the police have gone digital and I can't listen to them anymore... :(

Hello,
I got a Regency ACT-T16K scanner that is reset and no battory in it.

I can not figure out how to get and frequanceys programed into it, it
keeps staying on the factory set frequences.
There is some odd combination of things you need to do or push to
get it to exsept other frequences, but I can't figure it out.
I have tryed with a battory in it and without, no difference.
Can some one telll me how to program this ?

Also id there any one that can tell me what frequences this
will cover ?

Thanks for any help.

The last Pro-51 to accept a keypad test mode mod was a unit with a date code of 7A4. They stopped after that. 7A6 will only allow you to hear cells on the images above 896 MHz. Sorry

Be content with listening to cellular images *or* find an older Pro-51
(date code "7A4" or earlier) that the keypad trick will work with.

Don't waste your time with trying unproven "so called" cellular mods
involving cutting and jumpering pins on the CPU. Chances are, all
you are going to do is screw up your scanner and void any warranty
you might have.

The newer Pro-51s receive cellular images very well without any
modification. The only advantage of a modded scanner would
be that the frequency stepping would be correct for the cellular
bands.

Fred,
Try opening the squelch on the 2006. I think you will find that the ACARS transmissions are so quick that they do not allow time for the squelch to open.
I would also give it a try from the speaker port with the squelch open.
mark

Fredric J. Einstein <feinstei@mailhost.fsic.ford.com> wrote in article <6aapja$l891@eccws1.dearborn.ford.com>...
Please help if you can.

I am attempting to receive and decode ACARS using my PRO-2006 and the Universal M-8000 decoder. I have added a discriminator output to the PRO-2006. I have tried feeding the M-8000 decoder with audio from the speaker and headphone jacks and via the discriminator output that I've added. I have not had any luck. The M-8000 DOES decode ACARS from a CD recording of ACARS transmissions that I've played back into it. Does anyone have any insight on ACARS reception from the PRO-2006?

Thanks,

Fred

LATEST NEWS!!

Seems John Mackey hasn't been feeling all that
well lately. He's been listless and shiftless,
and no wonder why!!! He had an 18-ft TAPEWORM!

That damn tape worm was so big and stout that
the standard worming medicines wouldn't touch it.
The tapeworm thrived on all medicines.....

But fortunately for Mackey, he had a smart doctor.
About two weeks ago, the doc says, "John, come back
tomorrow and bring me one bananna and four vanilla
wafers. Desperate, Mackey agreed.

Next day, bananna and vanilla wafers in hand, our
good man Mackey popped into the doc's office bright
and early. The doc had Mackey lay out on the table,
bare-ass up....and casually shoved the bananna and
four vanilla wafers up where the sun never shines.

Then he told Mackey to come back each day for the
next five days, each day with one bananna and four
vanilla wafers.

Puzzled, but desperate, Mackey did as the doctor
ordered, and each day got a bananna and four vanilla
wafers shoved up his monstragonous derriere.

Finally on the 6th day after the same procedure,
the doc ordered Mackey to come back one more day,
but this time with just a banana - no vanilla wafers.

So on the 7th day, Mackey boogied back into the
doc's office and jumped right up on the table.
The doc placed a brick under Mackey's patooty,
and then slid the bananna in.

Then he grabbed a 5-lb sledge hammer and held
it up over the brick....and waited.

....and waited.......
```

After about five minutes, the tapeworm stuck its
head out and bellowed, "Where's them goddam vanilla
wafers?" at which time the doctor lowered the sledge.

WHA-mmmmm-O!

End of tapeworm. Congratulations, Mackey!

Now this might otherwise be the end of the story,
except if you get to wondering how's come Mackey
is sniveling and singing soprano these days.....

The sledge hammer hit a little off center.....

I guess all that puking was after the doctor slapped his mother instead of him. Any ways with all dick heads aside, I was wondering if you could please help me out with a topic mentioned in you're book the Ultimate Scanner. You spoke of a reciever tracking method using another reciever 455Khz off tuned to effect a heteroydyne in the Rx. I am interested in building a practical and mobile unit. I have considered using a type of front end 455Khz frequency converter so as to not totaly modify a scanner. Any advice on a modification which will result in a scanner with such specifications as to perform the task mentioned in you're book would be greatly appreciated. Thank you for taking the time to reply. danny2@globalserve.net

2844. Re: pro-26 comments, data squelch

Newsgroup: rec.radio.scanner
Date: 1998-01-24 00:00:00 UTC

Message-ID: <6ac8vc$8pb$1@newsd-121.bryant.webtv.net>
Source record: 172765

I have a PRO-26 and the data squelch works just fine. The scanner will not resume searching for about 3 seconds after a non-voice signal is detected and it determines that the signal is not modulated. The scanner will not instantaneously skip past these freqs without stopping on them. Also, it will remain locked onto the freq even if just the tiniest little bit of noise or modulation is getting into the signal. Mostly, I use the DS function to skip over birdies during search mode.

Source record: 172775

The paging transmitters are licensed by the FCC to broadcast over the airwaves and as such must meet FCC technical specs before being allowed to transmit. The cable company does not broadcast the signal to your house. They must use a totally enclosed and shielded system to get the signal to your house because they use freqs of other radio services and CANNOT have a leaky signal interfering with with those services. If the signal getting into the cable system messes up your picture, the FCC could care less, however, if the signal getting out of the cable is is interfering with licensed radio services, they will tell the cable system and ONLY the cable system to correct the situation.

It is hard to give this guy much credibility for the following several reasons. First, he is obviously a very new ham (by his callsign) & only a codeless tech so he has little experience or knowledge in radio. Second, he obviously knows little about the internet or other online etiquitte as he uses that online card *.VCF which most people know to stay the hell away from because of the problems it creates.

Bill,

The metallic tuning tool you suggest using would still affect the
capacitance in the circuit, even if the shielding can is grounded.

This is commonly known in the field as "stray capacitance" &
can make a big difference sometimes.

You indicate the adjusting side of the trimmer cap is at ground
potential, this would then make the metallic tuning tool (as you suggest
using in the oscillator circuit) grounded. Thus, it would act as
some form of an antenna for the stray capacitance.

If you would like to find out about "stray capacitance", let me know
& I will tell you where you can find some articles & other information
on it.

If you are referring to the sats found in the 137-138 mHz range, it's because they use a bandwidth wider to transmit on than your scanner's receiving bandwidth. The narrow filter in your scanner effectively blocks out most of the signal and what little bit does get through is so weak that it is buried in the noise generated by the circuitry of the scanner. There are special receivers on the market intended solely for listening to these satellites (such as weather sats, etc.).
Dave

> would expect to change would be the "RESONANCE", not the frequency.

Ummmmm, hey Shitbag, if the "resonance" changes, then
how could the frequency stay the same? A lot depends
on what you mean by "resonance", though. There is only
one proper definition of it in radio circuits, and THAT
is the condition where capacitive reactance (Xc) equals
inductive reactance (XL). If you change either one, snotwad,
the frequency changes. So what the hell ARE you talking
about, numbnuts?

> If you would like to find out more about the
> theory of "resonance" please let me know & I will supply
> you with sources for that.

You are one stupid nincompoop, Smacksie. BTW, I
wrote the BOOK on Omega-F....but you go ahead and show
me how smart you really are. TELL ME about these
things....don't refer me to places and subjects of
which you know absolutely nothing.

Comprende?

> > > This is commonly known in the field as "stray capacitance" &

It *is* accounted for, you idiot!

> This is an effect that is present at
> ALL times, not "sometimes" as you state above. If you
> change the amount of capacitance in a circuit, you can make
> drastic changes in the resonance.

Sometimes. If you change a picofarad at 1 GHz, yes it
is likely to make a difference. But a pF at 1 MHz may have
absolutely no impact at all. Everything's relative, you
horse's ass. Now get back to your Radio Amateur's Handbook
and bone up before you come tangling with me. You aren't
even *close* to having what it takes.

> "Resonance" is made from a combination of resistance,
> inductance, & capacitance. So changing the capacitance
> is a major ingredient.

You are one dumb plum, Stinkball. Resistance has absolutely
nothing to do with "resonance" whatsoever. Show me an equation
for resonance that includes "resistance". The old time-honored
reference for resonant frequency is the reciprocal of twice pi
times the square root of the product of L and C. "Resistance"
is not in the equation, dumbass. Just OMEGA, inductance, and
capacitance.....and that's all she wrote.

In fact, resistance plays a role solely in "damping" and in
bandwidth of complex resonant circuits.

> > Are you stupid? A grounded tool on a grounded plate
> > does absolutely nothing. But in this case, the issue
> > again, is empirical - not theoretical. It takes less
> > than a minute to find out, FartFace.

> Mr. Cheek, even a metallic "grounded tool" would change the
> capacitance, most likely adding capacitance to the circuit.

No, asswipe, in this case, it does NOT. Read my lips!
You can stick a jewelers screwdriver into the adjustment
slot of X-301 in the PRO-2004/5/6 and it will NOT alter
the "resonance" or Fo of the circuit in any manner that
can be detected by a frequency counter accurate to one
part in ten to the 7th.

> That is why non-metallic tuning tools are made &
> intended for such circuits, rather than using a schrewdriver
> as you recommend earlier.

READ all of my post, Smacksie-idiot! I just told YOU
that I tried every tuning tool in the arsenal and none
work or work as good as Radio Shack's #3 flat blade
jeweler's screwdriver.

And READ again where I am talking empirical data; not
theoretical ruminations like you're spewing between that
gap in your buckteeth.

Geezus, Mackey....if you want to make a half-hearted
attempt to discuss rhyme, thyme, and reason with me, then
take the time and trouble to READ every goddamn thing I
say or else go back to your handbook and make damn sure
you know what you are talking about.

But it makes civil sense to read what the other guy says,
regardless of what you think.

Ummmmm.....Mackey......I am *not* shitting you in this matter.

And I really did write the book on omega-F. And on the
nature of "Q" as well.

Now reread everything I said.....or beat it.

Hi Lee-

I think your best bet is probably a trip to your nearest Radio Shack
where I'm sure they could help you get plans,parts,kits whatever. You
can go to www.radioshack.com to find a store near you or call their
800 number. Good luck and let us know how you make out.

Scott R. Ehrlich wrote:
> I'm very interested in both radios' capabilities, though I
> haven't used either, yet.

Hi Scott,
I have reviews I did for both of these radios at my web
site. You might be interested to read them over and see if
they help you make a decision. Go to my home page in my
signtare, click on radio monitoring and find my table of
receivers. You should be able to figure out the rest.
The AR8000 is a better receiver in terms of specs for
HF, VHF and UHF. It scans and searches faster than the R10
which is about as slow as you can get these days. The R10
is built better and is quite a bit smaller. The AR8000 is
quite complex with just about every tweakable option you
can think of. The R10 is a bit quirky...as usual. For
instance, you can only scan one or all banks...nothing
in between which is a major disadvantage for most users.
Best of luck with your decision!

Hello Lee ...

Try contacting the American Radio Relay League (ARRL) at

http://www.arrl.org

Leave a message there if you can't find what you need on the site.
They'll help you, I'm sure. There are many articles in their magazine
over the years describing simple receivers.

Have fun!

Continuous Tone Coded Squelch System

Without being too technical, it's a method whereby a radio receiver stays muted until it receives a transmission which is (a) on the correct channel and (b) the correct TONE frequency to unmute the receiver. CTCSS tones are considered SUBAUDIBLE, i.e. they range from 67.0 to 250.3 Hz normally, and are transmitted at a very low level along with the rest of the signal (voice, data, etc).

859.2625
860.2625
These are the main public safety frequencies for the State College area,
shared by both State College Borough and The Pennsylvania State University,
and are licensed to Penn State; see http://cac.psu.edu/~fld1/pdr.html for a
link to the Police Services home page and a more detailed description of
the system. Used by Penn State Police, and workers at recreational events
at Beaver Stadium (e.g. football) and Bryce Jordon Center arena (e.g.
basketball, events, and concerts) for parking, traffic control, ushers,
maintenance, EMS, and food service (but generally not campus maintenance).
Also used by Centre Co. police and, increasingly, public works (but not
fire). The control channel rotates randomly between the 857, 858, 859, and
860 MHz channels and generally changes frequency at 11:00 PM (but sometimes
changes mid-day). Traffic analysis shows that the 857, 858, and 859
frequencies bear most of the traffic. Morse code ID's occur at H:07 and
H:37 on 856.

Units numbered in the 2000's are EMS, 3000's are Centre County police (e.g.
32xx-State College, 34xx-Bellefonte) while 4000 units are PSU.
```

Trunked radio talk group ID's include: 0290 (State College Police), 0510 (State College Grounds Dept.), 0470 (University Police), 01B0 (Campus Student Escorts), 08xx and 09xx (Jordon Center), and 0530 (EMS). Details on talkgroups here.

Centre County (County Services, Fire, etc.):
33.64 (Walker Twp. Fire)
46.06 (Emergency)
46.14
46.2
154.995 (Rush/Spring Twp.)
155.205
155.785
460.55 (EMS - Alpha base)
465.55

Alpha Fire Company:
154.415 (Channel 1)
154.37 (Channel 2)

2882. Re: Pro-37 Keypad Problem

Newsgroup: rec.radio.scanner
Date: 1998-01-25 00:00:00 UTC
From: Knut Otterbeck <otterbec@online.no>
Message-ID: <34CBC092.440B72B2@online.no>
Source record: 172504

Maybe the problems are caused by a battery-leakage?

The fine print on the circuit-board may have been damaged
by some acid from a broken battery.

Remove the battery-pack and have a look underneath it,if
you can se some white,powdery substance there,chances are
the board has been damaged.

Well,at least this is a possibility. The board would then
have to be cleaned and prepared,and some skillful work with
a soldering iron would probably fix the rest .

Here's the remedy. If they're constantly posting off topic stuff,
simply report their newsgroup "abuse" to their Internet Service
Providers. When their accounts get cancelled, you won't see their
(Mackey's or Cheek's) idiotic posts anymore.

(FYI, it's a violation of most provider's TOS to post moronic off topic
discusions, in newsgroups).

Does anyone have ANY information about development of digital
scanners? Is the technology even being investigated?

Techies,

What is the law on scanners? I understand that some scanners can intercept cell phone conversations. If they do, what is the model number of the type that do. Do scanners only pick up local transmitters? Can they pickup a transmission 100 miles away? Does a scanner listen to the strongest signal then skip when a stronger signal is received? Questions, questions, I have no scanner experience, is there a web site that describes the terms, technologies and sellers? Are scanners digital or analog receivers? Do they require special antennas?

Tony
(So many questions)

The VX-1R Software and Hardware mods (Version 1.00, Date: 14.11.97)
==========

Some time ago some mods for the VX-1R from YAESU were released on the
Net (Solder Jumpers 0 and 1).

In the US they are working (because by accident you switch to the
FreeBand Country Code 000 (US is 011), ARS is disabled) but in Germany
(Country Code 101) with soldering Jumper 0 (1 already soldered) you
Switch to Country Code 100 and get something totally different :)

You don't understand ?, keep reading :)

In the following Text the meaning of the 6 Jumpers is explained and
I present the Software mods for the VX1R. This is very simple, fast
and easy done, you just have to change 1 (one) byte in your .TPL file,
you don't even have to open the VX1R but you need the VX-1R Programmer
from the ADMS 1D Software Package.

After I have released the Software mods for the FT50R, there was a lot
of confusion, there were to many terms like Key_Byte, Band-Set_Byte,
Sub_Band-Set_Byte, ... to many addresses , ...

This time I will not go into details, and will try to keep it as simple
as possible, ONE Address and a Band_Set-Byte only.

The Band-Set_Byte is identical to the 6 Jumpers on the VX-1R:☐

```
Jumper 0 = Country CODE 1st bit ----------------------+
Jumper 1 = Country CODE 2nd bit -------------------+ I
Jumper 2 = Country CODE 3rd bit -----------------+ I I
Jumper 3 = WIDE TX ----------------------------+ I I I
Jumper 4 = CELLULAR -------------------------+ I I I I
Jumper 5 = WIDE RX ----------------------+ I I I I I
I I I I I I
Band-Set_Byte (8 bits) = 1 1 X X X X X X
```

I I

Enable/disable WIDE TX from 140-170 and 420-470 (MARS/CAP)

CELLULAR (enable 1, disable 0)

Enable/disable the range 824-849 and 864-894

WIDE RX (enable 1, disable 0 = see below)

BC Band - Enabled
FM - Enabled
AIR - Disabled
V-HAM - RX Enabled only in TX range according the country code.
VHF-TV - Enabled
ACT 1 - Disabled
U-HAM - RX Enabled only in TX range according the country code.
UHF-TV - Enabled
ACT 2 - Disabled

You can make the mods by Hardware (solder the Jumpers) and call the
INIT routine (hold down AR and M/V at powering on, and press FW)
or by Software, you need the VX-1R Programmer and you have to change
only 1 byte (a 10 seconds job) in the .TPL file, no Init is required.

The results with the Hardware and/or Software mods are 100% identical
and 100% reversible. The only difference is that with the Software
mod you will switch back to your Hardware Configuration by calling the
INIT routine.

According to some messages in the past days, YAESU is removing the
diodes from the VX-1R to disable the Hardware mods, so the Hardware
mods may not work in the future Versions of the VX-1R, then the
Software mods will be the only Solution.

If you are using Hardware mods, note: 1=JumperOpen, 0=JumperClosed

If you are using the Software mods, it is not importuned what Hardware
configuration you have (read: mods you have done), you can simply
switch to ANY configuration.

Example:
7 6 5 4 3 2 1 0 (Jumpers/Bits)
Bits 7 and 6 are reserved 1 1
Enable Wide RX 1
Enable Cellular 1
Enable Wide TX 1
German 1
Country 0
Code 1

Band-Set-Byte 1 1 1 1 1 1 0 1 = FD (HEX Number)

Well, make now a .TPL file and change with a HEX editor the Byte on
address 114C to be FD, upload this .TPL to the VX1R, done.

So, I thing the mods are understandable now, with this method you
can configure the VX1R exactly according your needs.

The most used mod will probably be to enable WIDE TX, so the Auto
Repeater Shift is still working, the TX outside the WIDE TX (with
the FreeBand Country Code 000) is anyway only in miliwatts in VHF
(not useful) and a little bit better in the UHF range 340-420.

A wise solution may be, not to make any Hardware mods. You make the
Software mod (Enable WIDE TX or FreeBand) and in a emergency you can
switch to the unmodified (factory) configuration by the INIT routine
in just 1 second (hold down AR and M/V at powering on, and press FW)
You know, just in case ...

That's all folks, for now :) , there are some other interesting things,
but I want to experiment a little more before I release them.

If you have any Questions, Email me.

73's to all.

PS. - Thanks to Mark Russo for his great Help, ...

- Greetings to all my Friends in Skopje, Mazedonia.

Well, since the school might be upset if you bring a straight edged razor blade to school, you might try a slight variation of the FOXHOLE RADIO. (Basically, a "crystal set".)

It requires a single geranium diode, a Quaker Oats box, a high impedance earphone, a good length of magnetic wire... hmm, I think that's about it... A trip to your local library should render several different designs of a typical "crystal set."

BUT... almost every science fair has a crystal set, so it's nothing new... Have you considered a lightwave communications system using infrared LED's instead... I believe Radio Shack has a "Engineers Mini-Notebook" which covers building these... Check out the "Optoelectronics" notebook or the "Communications Projects" notebook.

Dave:

The filters are wide enough on the VX-1R for excellent sound quality on commercial FM broadcast, and T.V.! AM works well, but not with the stock antenna... needs something much longer.

ECPA can be *interpreted* to mean that knowingly receiving cell phone conversations without the consent of the parties talking is illegal. But the language is ambiguious. If you record such conversations, you stand a greater chance of getting prosecuted than if you just listened (If you get caught). If you get a scanner, don't talk to anyone about it. Don't tell your neighbors, your co-workers, whatever. Just keep the scanner and what you hear to yourself.

Since Late 1994, scanner manufacturers have taken tough steps to make scanners with cell phone frequencies blocked and difficult to modify. Cell phone frequencies were blocked out on many early models, but the block was easily circumvented by clipping a diode, or soldering in a wire patch, etc. Nowadays, the modifications are not that easy. There's lots of guys here who could do it. Not me.

I'm sure someone is going to come along and give you more info.

Check out my PROgramit project at http://www.qsl.net/ka2pyj. PROgramit is a HW interface and SW that adds computer control to almost any scanner. It will work nicely in a PRO2045. The PRO-26 presents a bit of a mechanical challenge, but external interfaces have been built for such handhelds.

You can build the HW for about $20.00 including a PCB. SW is available as shareware and a $12.00 registration is requested. I have one interface built and tested that I will sell for $40.00 including registered SW if you would like it.

The pro-26 is currently available from radio shack for $199 on closeout,
and grove still had them listed for $250.

If the 43 is in very nice shape you could probably get $300 for it.

One way around this Jeff is to use a duplexer or triplexer such as the Comet which allows you to seperate antennas from 1.8-30 mhz, and above. Maybe this would solve that dilemma....

I have used a RS Tv antenna for about three years. I mounted it
vertically and use a 75 ohm adapter and RG-8. It's mounted about 35'
high and performs as well or better than previous discones and
ground planes that I have used.
This antenna was given to me by a neighbor that got cable. He said he
paid over $200 for it and the mast.

Lee,

I have to run 100 ft of coax to get to where my antenna is,
so I get a ton of loss on 800mhz. I found a good solution
in a mag-mount cell phone antenna. It works so well on
800 mhz frequencies that I found it hard to believe the
difference. I just use a tee off the back of the scanner and
use both my discone and the cell phone antenna.

BTW, RG-58 is terrible on 800, so much loss over long runs
it isn't worth using. RG-6, RG-8, 9913, 213, anything like that
will do much better.

When I reading about Doppler RDF systems
(http://members.aol.com/bmgenginc/Doppler.html ,
http://dfsystems.com/dpic.html
and http://www.dopsys.com/)
I think why such things must be so difficult to build.

Why not write software doing all this.

We need: 4 whips antenna, RF summer (4 diode switch e.g. 2*
http://dfsystems.com/handsche.html) driven by parallel port, scanner,
sound card or HamComm interface AND software.

When I have doppler how to calculate own position using 3-9 known radio
station (not using GPS)?

I&#65533;m sorry about my English.

Bill

Source record: 172539

Just hooked up a small utility battery (170 CCA) to power one of my radios here in the house. Radio draws about 7A peak on transmit, and this seems to work well. Planning on wiring in a trickle-charger (1-2A), and leaving it plugged in to assure the battery always has a full charge. Wal-mart sells these for $16.95. Apppears to be nothing more than a wall wart type power supply with 120VAC in and 12VDC out @ 1A. I have several wall warts in my "junk box" with the same specs. Can I simply cut off the plug, attatch the wires, and use these? Or is there something "special" inside the trickle-charger that makes it more appropriate for battery-charging applications?

Consider the Bearcat BC895XLT Trunktracker:

> 1) Discriminator modification easily (or already built on)

Unfortunately that's the only unknown since I just purchased the radio and have yet to open her up.

> 2) Military Freq mod avail (200-400mhz)

Close. Covers 225-400 MHz (12.5 KHz steps)

> 3) 200-1000 channels (200 req... up to 1000 is cool. doesnt NEED 1000)

300 channels in ten 30-channel banks.

> 4) Computer controlled would be nice, but again not MANDATORY

RS-232 port standard equipment.

> 5) relatively affordable (not above $400)

I purchased mine for $320, although I know you can find them cheaper. Nice base scanner with lots of neat bells-and-whistles.

Zoof

Rudy:

Myself, and a local friend of mine, are both very satisfied with the PCR1000. While nothing is perfect, all things considered, it's a good buy! There are some minor software issues, but keep in mind it is the first release. Third party companies are already reverse engineering the control scheme to allow them to develop their own software, i.e.; ScanCat, already has a beta out! Icom was playing stingy with their source code, and control commands, but it now sounds like they may be rethinking their marketing strategy, or lack of one.

To sum it up, the PCR1000, is like a R8500, without a face, for a lot less money.

Ted:

Be careful! Not all VX-1R's are created equal, and not all published mods will work with all VX-1R's! There has been numerous changes, both electro-mechanical, as well as firmware / software. Most VX-1R's can be modified by software alone, making it unnecessary to even open the case of the VX-1R, let along perform micro surgery!

Check out the following site for the details!

I had just gotten pc895 and the cable to go along
with it. Everything seemed to be ok until I try
to upload to the radio. Ch from 1 to 10 upload
ok then 11 12 13 14 are skiped then 15 to 30
are finished uploading, Has any one else had
this problem, Some of you who have downloaded
the trial ver of PC 895 may have experienced this
and thought it was only occuring in the trial version.
Has any one else any input on this problem. I
have a paid version with the same glitch, Uploading
to the radio is one of its most important features
I am hoping that I am not stuck with defective
software. If it is a software problem, those
of us that paid for it deserve to have clean
software suplied to us, by email or whatever.
I am not trying to make waves, just trying to
find an answer to a problem.

About ten years ago they did change the voices.

Hawaii's voice was Susan Kennedy of KGO Radio in San Fransciso

Boulder's voice was a male from KGO Radio in San Francisco... although
I can't recall for sure which one it was (Bob Trebor or Lee Rogers are
two possibilities... I believe Bob Trebor was a model for some of the
earlier car voice synthesizers "You door is ajar")

> these? Or is there something "special" inside the trickle-charger that makes
> it more appropriate for battery-charging applications?

Everything depends on the precise kind of battery
it is....and from what you said, I can't tell for
sure. Sounds like a type of lead-acid battery, in
which case the maximum safe trickle charge is about
13.80 volts across a "12v" battery.

If you can regulate that power supply to 13.8v and if
it has the current capacity that might be required by
the battery, then it could serve a useful purpose.
So far, I've referred to the subject title, which
appears to not be related to the text of your post, though.

If you're asking if you can run a radio off a battery
that's floating on a trickle charger, then yes. However,
of the battery drains say 5-amps on the average when
you transmit, and if the trickle is 1-amp max, then over
a period of transmitting, the battery will run down.

This brings up a subject we'll call "duty cycle". If
the drain-to-recharge rate is 5:1, then over the long
haul, you have to allow for a minimum 20% duty cycle,
with 10% being best to assure long term health of the
battery.

Hello!

I have a very old portable scanner from Radio Shack. Model # 20-106. A Pro-25 scanning receiver. It it an 8 channel and takes crystals.

The antenna on top screws in and Radio Shack does not make an external antenna adapter.

Really an old looking set.

Speaking of your receiever from Radio Shack. I have a Realistic Pro 2008. It has 8 channels, but is programmable. We've had it since the early 80's.

I really wish folks like yourself would participate in the ng awhile
longer before decided on a "course of action".
Bill Cheek (NO S) knows a lot about scanners, and is sometimes the
cause of a nonsense post now and then.
John Mackey knows not a darn thing about scanners, and has been the
cause of NOTHING BUT nonsense posts.
Either way, they will still exsist, since there is no moderator for
this ng, and they are as free to express their opinions as you or I.
Once again, read a little before forming opinions, or do a search on
Dejanews (http://www.dejanews.com) under Mackey and see all the
absolute nonsense he posts. Better yet, see the LACK OF any usable
scanner information.

Bowers still uses the 47.62 for some of their operations in Long Beach.
Don't know about their L.A. operations.

AMR uses several frequencies, but one main one is the old Goodhew frequency
of 46.04 mHz. This covers Long Beach, South Bay and much of L.A....maybe the
valley as well, but I am not sure. This frequency is not on a repeater, so
the rigs mst be close for you to hear their side.

Jim,

Although I have not looked in the manuals, your UHF freq is most likely military. All civilian Approach/Departure Controls, as well as ARTCC have the reponsibility of separation for all aircraft under Radar Control in their airspace.
The UHF being active only part of the time is due to MOA's in your are only being active during those times, or when all aircraft (civil and DOD) need to hear the transmissions of ATC; then ATC will simulcast on both UHF and VHF.

Hope this helps...

SkyHope@aol.com

Clinton Closer to Iraq Strike

WASHINGTON (AP) - President Clinton edged closer today to ordering a U.S. military strike against Iraq and ordered his senior foreign policy advisers to inform allies and other countries of that prospect. Iraq's continuing defiance of U.N. weapons inspections is ``a serious matter,'' White House spokesman Eric Rubin said after Clinton met for an hour with his top security advisers. The United States may strike Iraq alone or with the support of Britain and a few others. Rubin said Clinton had made no final decision. But he also said action could be weeks away - not months - and that consultation would involve Persian Gulf governments.

Remove C130 on the linear board. This is a 0.01uf cap
at the input of the audio chip on the linear board.
Be careful, this is a SMT device and requires some skill.
Output will be much more crisp and you wont have
to crank up the volume as much since it will be more
intelligible. The overall power output will be the same
but it *sounds* louder.

Thanks to Bob Parnass for the insight on this one.
He has a similar mod for the PRO-43.
I've since performed this on many types of handhelds
with great success!

>
>Thanks,
>Bob
>
There was a link to the mod at Ken's Radio Scanner Page:

http://www.access.digex.net/~kplotkin/scanner.htm

It's easy to do; the center terminal on the battery
holder is negative, the outer one positive. Look inside
the scanner and you will see three terminals. The one nearest
the center of the scanner lines up with the negative terminal
on the battery holder. The middle terminal inside the scanner
lines up with the positive terminal on the battery holder. The
outermost terminal inside the scanner is the positive terminal
of the charging circuit but does not contact anything on the
battery holder. Solder a piece of thin metal (brass shim stock
works well) to the positive terminal of the battery holder making
sure it extends far enough toward the outside edge of the holder to
contact the positive charging terminal inside the scanner. Secure
the end with hot glue, super glue etc. Be careful not to melt the
plastic of the battery holder when soldering. This mod will probably
void your warranty so do it at your own risk. If you're careful, you
should be able to undo it without leaving any traces if the scanner
needs to be serviced under warranty.

> agency in Fort Collins, Colorado.

It's still there.

> It would tick, tick, tick.... and then say something like "At the tone,
> 10:07 Greenwich Mean Time.."

"Coordinated universal time..." now.

> Does anyone have the freq for such a station?

It's WWV and WWVB.

2.5 MHz @ 2.5Kw (5Kw from Hawaii)
5 MHz @ 10kW
10 MHz @ 10Kw
15 MHz @ 10Kw
20 MHz @ 2.5Kw (Colorado only)

WWV is in Colorado and broadcasts with a Male voice, WWVH is in
Hawaii and broadcasts with a female voice.

Listen to the higher frequencies during the day, and the lower
ones at night.

They have a website where you can have a "look around" the
station.

>
They don't.

Reading all the current articles in this newsgroup would probably answer
both of these, but if not, there is always www.dejanews.com.

>3) What frequencies do the river boats broadcast on?

No idea. But if you punched the latitude and longitude of where they land
into some forms at:

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

and specify a radius search of one mile from this point I bet you could
find them.

>
>4) Is there any cool frequencies/info I should know?

Yeah. The trains are on 160.110 - 161.565 MHz. If you're in the city
proper you can probably hear a lot of train activity.

I dunno why I didn't started listening to trains earlier.

To open up recieve on the Yaesu VX-1R HT to recieve all freqs in the ACT 2 band which are blocked from the factory, follow this for a revision 105 radio. THIS RADIO VERSION WILL NOT TRANSMIT ON ANY BAND BUT THOSE FREQS IN THE VHF AND UHF HAM BAND!!!

Open up the unit - removing the three screws on the right side of the radio's back. Carefully pull from the right side up, and be sure not to break the case on the left.

Peel back the sticker covering the board where the battery usually is.

Locate jumper pad #4, and then find the VERY SMALL resistor to the left. Remove the resistor. (I VERY CAREFULLY took a small screwdriver and crushed it and made sure there was no contact between the solder contacts.)

Re-assemble the radio and while holding M/V and AR power on the unit. Then press F/W. The unit resets and you'll need to reprogram the memory.

This mod worked for me very well. You can also remove the resistor to the left of jumper pad 3 to enable wide TX in the V-HAM and U-HAM bands. (USE AT OWN RISK - I only use the wide TX at work on their freq.)

DO THIS MOD AT YOUR OWN RISK, that's how I did mine!!

Mr. Cheek, the frequency may very well stay the same. What we would expect to change would be the "RESONANCE", not the frequency. If you would like to find out more about the theory of "resonance" please let me know & I will supply you with sources for that.

> > This is commonly known in the field as "stray capacitance" &
> > can make a big difference sometimes.
>
> Don't lecture me on what you know nothing of. But
> you were right in one sense: SOMETIMES. Just not
> this time, you flippin imbecile.

Mr. Cheek, "stray capacitance" must be accounted for in ANY circuit. This is an effect that is present at ALL times, not "sometimes" as you state above. If you change the amount of capacitance in a circuit, you can make drastic changes in the resonance.

"Resonance" is made from a combination of resistance, inductance, & capacitance. So changing the capacitance is a major ingredient.

> Are you stupid? A grounded tool on a grounded plate
> does absolutely nothing. But in this case, the issue
> again, is empirical - not theoretical. It takes less
> than a minute to find out, FartFace.

Mr. Cheek, even a metallic "grounded tool" would change the capacitance, most likely adding capacitance to the circuit. That is why non-metallic tuning tools are made & intended for such circuits, rather than using a schrewdriver as you recommend earlier.

I'm very interested in both radios' capabilities, though I haven't used either, yet.

Both have alpha-numeric ID capability per frequency. The 8000 had various problems, including audio. I'm wondering if this new version will fix that?

Icom seems to be very good with frequency stability (interference, etc).

With the end of the Icom offer (saving $100) coming soon, what do people think of each radio?

I'm siding with Icom due to price and past Icom reliability.

Thanks for any comments, experiences, etc.

I'm in the Boston, MA area, and don't travel much.

I don't know about the AR8000B vs the original AR8000.

Truth be told, I'm not "red hot" about either the AR8000
nor the IC-R10.

If you want to monitor just a handful of VHF/UHF frequencies
at a time, the IC-R10 I tested worked fine. But, it was so slow
as to be almost useless for my multi-channel scanning activities.

Use on shortwave was impractical with the included antenna.
The IC-R10 really needs an outdoor passive antenna or an
indoor active antenna for swl'ing.

For fast, clean VHF/UHF scanning and searching, consider a
Bearcat BC3000XLT. If you require trunking, the BC235XLT tracks
Motorola trunked systems but lacks the wide frequency
coverage and features of the BC3000XLT.

For portable shortwave reception, consider a dedicated SWL radio.
Unlike an IC-R10, they are designed to be sensitive enough
using the built-in telescoping antenna.

The local Service Merchandise is closing out the Grundig YB400
for $139.

I don't know how to modify but:
I have a BC2500XLT and an interesting fault (Feature? :)) is that it
images the cellular band offset about 400MHz at 1269 to 1294 MHz. I
asked about it on this newsgroup and a gentleman explained the theory
behind imaging and how to calculate where it would be imaging based on
the internal intermediate frequency. I don't remember the calculation
but you might want to check the above frequencies on your 2500XLT and
see if yours is also imaging at those frequencies as then you may not
need the modification.

I think the simple answer to that is 'confused' 8*)

There are numbered channels running from 1 to at least 192. Each numbered channel appears to have an alphanumeric tag associated with it as well - eg: Ch 50 - 'Emergency', Ch 182 - '4-C', etc...

The confusion seems to stem from the fact that both schemes are being used - the dispatchers seem to favor the alphanumeric tags, while the field units seem to prefer the channel number (guess who has the fancier radio interface 8*)

In practice, most dispatchers are compromising with transmissions like 'X meet Y on 4-C, ASTRO-182'.

This does bring up an interesting point, though --- suprisingly (or not) a lot of guys in the field *hate* the alphanumeric tags...

A case in point - a friend of mine had to work interagency with a department that had a huge trunked system. In the course of the operation he had to deal with requests to 'Go to Southwest Sector Tac 3 West' and the like... Imagine trying to dial that up on a radio with 200 tags! Whenever there was a 'frequency' change it took minutes or more to get everyone settled on the new channel... 8*(

Well the batteries in your scanner can go bad from over charging like
any other nicad. I know I leave mine plugged in too much and will stop
working one day.... For accessories I have had the best luck with Metro
West, they don't have a web page but you can call and request a catalog
at (708) 354-2125.

I got mine a couple weeks or so ago. Works great! Only sad thing I've encountered is Icom's slowness about getting out a software update (I'm still hopeful), and also I don't understand or appreciate Icom's refusal to publish the command protocols used on the RS232 interface. There are some third party companies working on adding support to their software offerings and Icom is making it very difficult for them to do it expediently... For the life of me, I can't see Icom's point of view on this. It isn't like they expect to sell multiple copies of their software for each radio sold... Baffling to say the least.

There have been postings in the past few weeks regarding a mod to open up full coverage reception (requiring some tiny soldering capabilities) and also someone published a handful of the command protocols that they had ferretted out on their own.

I've got no complaints with the radio quality or reception. Being a programmer it is doubly frustrating to be at the mercy of Icom to update their software. And w/o the command protocols, its pretty darn hard to write any special purpose software to control this radio. Really limits some possibilities doesn't it?

John

Don't be such a pessimist. There are a couple of things he could do:

1. Pawn the scanner and use the money to buy a cell phone. He can only get one conversation at a time (the one he's on), but that's something.

2. Remove the CPU, which controls which frequencies can be received. Pry the plastic apart, revealing the silicon. Carefully examine the circuit layout in the chip, and remove the blocking traces. Glue the chip back together, then re-install in the radio.

If that doesn't work, he can always come back here with a fresh worm on his hook.

It's not necessary to do any soldering. Just bend a piece of metal into a U, hook it over the edge of the battery holder, and squeeze it. Even if it's not a snug fit, the battery will hold it in place from the inside. Cathy DeViney describes how she did this with a piece of ribbon solder; that's in her 64-2041 package, which I've got on my already-quoted site.

Yes, you can. It will; however, be directional so you won't receive stuff nearly as well from stations "to the side or rear" of the antenna as you will from stations that the antenna points to. Also, the polarity will be wrong. TV station signals are horizontally polarized (thus a flat antenna) and mobil communications are vertically polarized (thus your car, cell phone, etc. antenna is an "up and down" stick.

But you can use one, and in many cases...they work better than the rubber duck on the scanner, if for no other reason than they are higher off the ground and unobstructed.

Best would be to get a antenna designed for a scanner though.

In response to my post here re LAFD getting 24 "800-band" freq pairs and not having to have the system TRUNKED, I received the following email from Brian Humphrey, LAFD Public Information Officer:

"The LA City Fire Dept (http://www.lafd.org) prides itself as an agency that plays HARDBALL. Whether battling fire or negotiating with the FCC, we maintain a razor-sharp focus on our objective.

"A key element in our success of securing those twenty-four 800 MHz frequencies (http://www.lafd.org/freqncy.htm) in a "conventional" format however, was
our research into the regulations and aggressive frequency coordination in the mid 1980's through our local chapter (http://www.cpra.org) of APCO (http://www.apcointl.org). It is sad that so many public safety agencies are ignorant on communications issues in general and the work of these fine organizations in particular.

"We anticipate that we will be able to maintain our conventional analog format for several years. The radio congestion in Southern California however, will likely *mandate* us (and most other occupants of the 800 MHz band) to switch to digital in the next decade or so.

"You also wrote...
> Their homepage has moved to <snip>

Actually, our new and permanent Home Page is: http://www.lafd.org
Note it is "org", NOT "com".

> And their 9-1-1 page is at http://www.cityofla.org/LAFD/911bud.htm

"That page and others will be undergoing a serious re-write in the near future. You can instead "visit" our dispatch center page (also undergoing a re-write) at: http://www.lafd.org/ocd2.htm

You can go straight to our voice radio frequency list at:
http://www.lafd.org/freqncy.htm

Harry, I hope this helps.

No...not stupid engineering...smart marketing <grin>. Much the same type of marketing philosophy as Gillette almost giving away the razors so they could make tons of money selling the razor blades!

That (any) radio's life will almost always be far longer than the batteries life...so over the life of the radio, it is probable you'll buy 5 or more battery packs for it...effectively doubling their profit. Whereas if you could put in plain-jane alkalines or off-the-shelf NiCad's...Uniden makes 0 additional profit.

After all...Uniden, and the others are in business to make money and make as much as they can within the constraints of a competitive market. Much as we'd like, they aren't in business to make us happy...making us happy is a secondary effect of making a profit. They make more profit if we're happy (because we buy more radios from them) that if we're unhappy. So...if we're happy enough with their radios...we'll also put up with proprietary battery packs.

Look at it this way...if your choice was to either have no trunk tracker at all, or have one that required special batteries...which would you choose? I guess the anwer is obvious since it appears you choose to buy a trunk tracker.

Smart marketing?? How about cheesy? Folks should complain about things
like
proprietary battery packs, poorly designed features, and missing
features. If
there is any competition in the market place, newer radios will be
improved.
I believe manufacturers do listen, but only if you speak up.

IF such a company existed...they'd be shutdown in a heartbeat by the FCC.

Obviously, the manufacturers of the GSM equipment and the wireless companies theyselves could decode it....but that's a different story than a company that would sell to the general public.

The Fast Food Frequencies are the same through out the
entire USA.

>
> What is the key to being able to listen to the fast
> food frequencies?

You'll want to listen to the Customer (Speaker) frequency
and be within one block of the restaurant.

>
> Charlie Brookhart
> cbrookha@erols.com

The most common frequency pairs to check are:

30.8400 --- 154.5700
31.0000 --- 170.3050
33.1600 --- 154.5100
33.4000 --- 154.5400
35.0200 --- 154.6000
154.5700 --- 170.2450
154.6000 --- 171.1050
457.5375 --- 468.3875
457.5500 --- 467.7750
457.6000 --- 467.8250
461.0375 --- 466.0375
460.8875 --- 465.8875
461.0875 --- 466.0875
469.0125 --- 464.0125

If they're using "3M" or "GM" headsets then you need to search
from 920-922 Mhz Wide FM for the speaker frequency and from
903-905 Mhz Wide FM for the headset frequency.

An ariticle on Fast Food monitoring appeared in the August 96
issue of Monitoring Times. It can be view online at the

Hi Shawn.
I just received my new battery, UPS from Scanner World $34.95 + shipping, I had two for about two years for my 2500xlt, But if I recall in the book it says that you can leave it plugged in to AC for home use with no problems , but it or I may be wrong. I know you don't want to go to Uniden for them.

I have another question about the VX-R1. Can you really hear/listen to A.M. and F.M radio stations. I have a Yaesu FT-50R, they say you can get wide band receive in the FM broadcast band. But it's too narrow or something, you know a station is there but can't understand it. Is this similar with the VX-R! or did they improve on it.

John's feeble argument is a classic example of a *little*
learning being a dangerous thing. The beauty of your
tuning technique is in its simplicity and John is just
trying to obfuscate the issue by inserting irrelevant
nonsense and non-facts into the equation.

What John can't seem to grasp is how obvious any
change in frequency is using this technique (zero
beating). What he needs is a demonstration.

What we could do is slap some earphones on him
and make repeated passes over the metal plate in
his head with a BFO metal detector with the volume
turned all the way up. I get first turn!

>(Mackey's or Cheek's) idiotic posts anymore.

Don't be an idiot. Most ISP administrators have better things to do
than insure that nobody offends weak-willed thin-skinned people like
you. Even if you did manage to get their accounts pulled, there are
dozens of other ISPs available, and they'd be back in the group in a
matter of a few days at most.

Take responsibility for your own actions, and quit trying to be a
NetNazi. The fact is that your own post here is as off-topic as the
ones you're whining about. Are you ready for somebody to complain to
YOUR ISP? I didn't think so.

Get a kill-file. Learn to use it. Problem solved.

> (FYI, it's a violation of most provider's TOS to post moronic off topic
>discusions, in newsgroups).

Yeah, right. BTW, your sig is WAY over the accepted limit for UseNet
posts. Guess I should complain to your ISP about that lame,
off-topic, bandwidth-wasting ASCII pic, too.

Newsgroup: rec.radio.scanner
Date: 1998-01-26 00:00:00 UTC
From: EnterDev Software <enterdev@aol.com>
Message-ID: <6ahj8k$gai@nntp02.primenet.com>
Source record: 172446

Hello Gang....

Since this is the first time we have encountered such a problem from one of our users - both shareware or registered, please let me state that this problem is being looked into - immediately. If there is a bug in the software, all registered users will be sent (either via E-mail or ground shipping) the fix for the software. Shareware users will have the ability to download the demo patch from our website if a patch is needed. I cannot stress enough that without customer's PC895 would not be anything.

If a software patch is necessitated, three things will happen :

1) All registered users will be sent a copy of the latest release.
2) All "Demo" users will have the opportunity to download the patch from our website.
3) A message will be posted in this newsgroup to let people know that a bug was found and corrected.

We strive to acheive 100% error free software, but unfortunately, sometimes we cannot catch every bug in the software (ie: Windows 95, Lucas Arts X-Wing vs. Tie-Fighter, and many others), and therefore we rely on our users to notify us of those errors, so that they can be corrected as soon as possible.

Once again, I would like to thank everyone for their support and interest in PC 895, and more then welcome e-mail for technical support issues, suggestions, and comments. Most e-mail will be answered within 24-72 hours.

****
****

1. First you cannot ask her to stop using the cordless phone.

2.Hearing the cordless around 147 MHz, is a ghost image usually 2 time the IF frequency of your scanner

3. tough luck

Anthony and Alina Jocius wrote:
> What is the law on scanners?

It is perfectly acceptable in most circumstances. There
are states which are scan-phobic(like Kentucky) which
forbid such actions outside of your home. There are
a few states which ban mobile use of scanners. Most
states have laws against using them in a comission of
a crime. Federal laws make it a no-no to listen to
cellular or cordless, to unscramble that which has
been scrambled and other little tidbits.

> I understand that some scanners can
> intercept cell phone conversations. If they do, what is the model
> number of the type that do.

Due to federal laws, manufacturers can no longer make
scanners which do this nor can they be easily modifiable
to do so like in the past.

> Do scanners only pick up local
> transmitters?

Pretty much. Comes down to the performance of the
scanner used, the antenna as well as how high you
can mount it(the higher, the better usually) and
what kind of power the transmitter is putting out.

> Can they pickup a transmission 100 miles away?

Most scanning is done VHF/UHF where there must be a clear
path between transmitter and your antenna. The curvature
of the earth, as well as other things, obviously limits
this distance. Depending on your elevation and the
height of the receiving antenna, you can work towards
100 miles but in normal use you're talking 30-50
miles max. An obvious exception is aircraft which are
up so high they can keep a clear path to your antenna
so 200+ miles is possible.

> Does a
> scanner listen to the strongest signal then skip when a stronger signal
> is received?

Not really. A scanner is usually scanning or searching. While scanning,
it is simply cycling through a programmed set of frequencies to see
if any of them have active transmissions. If they do, it stops to let

you listen to it then resumes when the transmission completes or you
tell it to continue. While searching, it is simply incrementing a
frequency value by discrete steps between a lower and upper limit
you usually select yourself. If an active transmission is found, it
will stop to let you hear it. There are variaions on these themes
but this is a large portion of what they do.

> Questions, questions, I have no scanner experience, is
> there a web site that describes the terms, technologies and sellers?

Try having a look at my Getting Started page

http://www.qsl.net/n2mca/STARTING.HTM

as well as my New Scanner User FAQ in my signature. You can also
check out my main radio page at http://www.qsl.net/n2mca/RADIO.HTM
for an overview of the hobby as well.

> Are scanners digital or analog receivers?

Most communications are still analog while the scanner
itself uses digital synthesis for reception. With special
devices and software, you can receive and decode various
digital streams.

> Do they require special antennas?

Require, no. Depends on how heavy you get into things.
Scanners come with antennas which connect to the scanner
itself for indoor use. To get more signals, you might
decide to mount an external antenna. And there are
different types of antennas for different purposes
and you can buy ones which are tuned for certain
frequency bands to help you pick up signals better
in these regions(at the expense of reception elsewhere).

Good luck with your introduction and feel free to e-mail
me if I can help further!

Strong signals,

>are there any common faults on the pro 2004 that sounds like a dirty
>volume control only non stop on rx when squelch opens?

You can isolate the problem further.
The audio fed to the rear panel Tape jack does not
pass through the final audio amplifier stage.

Do you get the "sputter" noise on tape when you use the
PRO-2004's tape out jack on the rear panel?

If you don't have a tape recorder, you can connect the tape
out jack to the Line Input jack on your PC's sound card and
listen to your PRO-2004 through your PC.

If audio at the Tape jack is clean, I suggest you replace
the audio output capacitor. I've had to replace the audio
output cap in several models after they had been heavily used.

The audio output cap in the PRO-2004 is C213,
a 100 uF/ 16 V electrolytic. Electrically, it's located
in series between the audio amplifier output and the headphone jack.

Physically, C213 is located on the Linear printed circuit board
(the largest board). Follow the wiring from the headphone
jack to connector CN2 on the Linear board. C213 is next to
pin 1 of connector CN2.

If you want to send your PRO-2004 out for service, consider
G & G Communications (telephone (716)768-8151).
They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

>1. First you cannot ask her to stop using the cordless phone.

If he were in the US he could. Part 15 devices must not cause interference
to other services. I don't know if Canada has a similar requirement, but I
suspect that it does.

>2.Hearing the cordless around 147 MHz, is a ghost image usually 2 time
>the IF frequency of your scanner

That would put the phone at 125.6 MHz, right smack in the middle of the
aeronautical band. If that were the case, then it definitely must cease
operation. Or it would put it at 168.4 MHz, where cordless phones also
are prohibited. And besides, the HTX202 has the best front end filtering
of any amateur HT, and certainly would not be giving an image response
to either of those frequencies even if the cordless phone were permitted
to operate on them, which it isn't.

What is almost certainly happening is that the 49 MHz cordless phone
is producing a strong 3rd harmonic, which convienently falls on 147 MHz.
This is, of course, illegal behavior on the part of the phone, and there is
nothing to be done to the amateur radio to prevent it from receiving these
spurious emissions since they are right smack in the middle of its legitimate
bandpass. The phone needs to be repaired or replaced.

>3. tough luck

It is tough luck because the authorities aren't very interested in enforcing
their own spurious emissions regulations anymore and are unlikely to take
the proper action to shut this illegally operating cordless phone down. But
the fault does lie with the phone owner, and the legal burden to solve the

problem is on the phone owner. That's cold comfort to Cutie of course since no legal action is likely to be taken by the authorities.

In the interest of neighbor relations, he probably should just buy her a new cordless phone, one that he has tested to make sure it is free of harmonics that would impair his operations.

From: bcostin@NOSPAMix.netcom.com
Message-ID: <6ah7gp$fjk@dfw-ixnews11.ix.netcom.com>
Source record: 172462

An article in the Carroll County local section of today's Baltimore Sun focuses on some coverage problems the system is apparently experiencing. The culprit appears to be a cost-cutting measure by our local gov't, which chose to use existing cell-phone towers rather than fund the construction of new, taller towers. I've linked to a copy of the story in the Sun's archives below for those interested in the details. If anyone out there can supply further details on this subject, I'd also be grateful.

I'm curious though, how are the new systems working out in other parts of the country? It seems that too often the folks in charge have the right ideas, but inadequate funding.

There are two types of software for the AR-3000A
1) Search Light - Runs on Win95 (or was it Win3.1 ?!)
2) ACEPAC3 - Runs on DOS (Looks better, runs better)

The Search Light s/w costs about US$95.00 and
the ACEPAC3 costs around US$180.- or so ...

Let me know if you want it. :-) see ya

Thanks for the tip Bob. I checked the Comet web site and all of their
duplexers and triplexers have bandpass filters that have large gaps...
ok for transmitting but limiting for wide range receiving. If I dig
deep enough on the internet there should be lowpass-highpass or
lowpass-bandpass-highpass for sale somewhere.

BTY I think the ICOM marketing picture of the PCR1000 antenna
attached to a monitor is hilarious. <g>

Much, much, much longer. And the AM band tuning system is bizzare
to say the least. But FM broadcast works just fine, though it isn't stereo.
TV sound works pretty good too, though the filter is really too wide for
TV sound, and degrades SNR.

> allowed to have a conventional rather than TRUNKED system?

The LA City Fire Dept (http://www.lafd.org) prides itself as an agency that plays HARDBALL. Whether battling fire or negotiating with the FCC, we maintain a razor-sharp focus on our objective.

A key element in our success of securing those twenty-four 800 MHz
frequencies
(http://www.lafd.org/freqncy.htm) in a "conventional" format however, was our research into the regulations and aggressive frequency coordination in the mid 1980's through our local chapter (http://www.cpra.org) of APCO (http://www.apcointl.org). It is sad that so many public safety agencies are ignorant on communications issues in general and the work of these fine organizations in particular.

We anticipate that we will be able to maintain our conventional analog format for several years. The radio congestion in Southern California however, will likely *mandate* us (and most other occupants of the 800 MHz band) to switch to digital in the next decade or so.

You also wrote...

> Their homepage has moved to: http://www.cityofla.org/LAFD/

Actually, our new and permanent Home Page is: http://www.lafd.org
Note it is "org", NOT "com".

> And their 9-1-1 page is at http://www.cityofla.org/LAFD/911bud.htm

That page and others will be undergoing a serious re-write in the near future. You can instead "visit" our dispatch center page (also undergoing a re-write) at: http://www.lafd.org/ocd2.htm

You can go straight to our voice radio frequency list at:
http://www.lafd.org/freqncy.htm

Harry, I hope this helps.

Forget DOS unless you make a living at it. Only DOS commands you need
to know are SCANDISK & DEFRAG. Used 486's go for $400 w/dos6.2 &
Windows 3.11 installed. Last time I heard DOS 3.xx, I fell off my
dinaseaur.

Much longer antenna for AM ?
You aren't implying this little bugger can receive in the AM broadcast area
are you ?
If AM air band still don't know why you would need a much longer antenna
unless the one with the
radio is not resonant in that area at all.

The pity is that he doesn't have an argument. He
tries and tries to slip me up and is reduced to
grasping at straws. Hell, he blows soap bubbles
at you, fer Pete's sake.

> The beauty of your
> tuning technique is in its simplicity and John is just
> trying to obfuscate the issue by inserting irrelevant
> nonsense and non-facts into the equation.

He found some quips and quotes in the Radio Amateur's
Handbook, apparently. This clearly shows he has no
experience - just a little theory, cut and pasted
out of an old "bible" so to speak. Anyone who's been
in the radio scene for any time knows good and well
there are thousands of techniques that can be employed
which, for all intents and purposes, defy "the book".

But then the "book" is for those who:

1. can't write one of their own
2. don't know in the first place
3. are desperate to catch someone up.

> What John can't seem to grasp is how obvious any
> change in frequency is using this technique (zero
> beating). What he needs is a demonstration.

I didn't think he understood the heterodyning process,
so I never even mentioned it. I figured he'd go
by the digits of a frequency counter, though.

```

> turned all the way up. I get first turn!

Okay. And when you're done, I want to stick the
electrodes of an HV power supply, one in his mouth,
and one up 'is arse, and then kick the switch
and watch his eyes glow for the first time
in 'is life.

The lights have been out ever since the poor wretch
was born. Ain't ever been anybody home......

I KNOW the particulars, WingNut! You would, too,
if you could READ.

> As long as they have your shit on their noses.....

So......you have shit all over your lips. Is that
supposed to count?

> Ah, I was waiting for the inevitable insults.

Ahhhh a spark of intelligence! You should have been
waiting....since you dished it out first.

> It's a sure sign you're losing an argument when you must spew insults
> instead of debating intellectually.

No. It is a sign that I think you are a shitball and
there is no sense in arguing with shitballs. Any original
sense of an "argument" was terminated when you steered
off the path of civility in your opening shot. That is
the rule I play by, Twit.

Now go back and read this thread again, including its
title and ALL of Sullivan's statements. You had no call
to unload like you did. Just use basic intelligence to
survey the flow.......

If you can't do that, then go love up to Mackey. You
and him can console each other and see who can blow
the biggest snot bubble.

Take your old pack to a local hobby store, most likely they can
replicate the pack with cells with more capacity and much cheaper than
buying a "ready made bc200" battery pack. Better yet, call hobby shops
first to make sure they can do this. Most good shops can and will.

3083. BC895XTL Audio Question

Newsgroup: rec.radio.scanner
Date: 1998-01-26 00:00:00 UTC
From: ljb@accessone.com
Message-ID: <34cddbfc.3333210@news.accessone.com>
Source record: 172478
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'm very happy with my new BC895XLT except for one small thing. The audio just doesn't seem to be as loud or carry as well as my old PRO-2032. It is in a room with a couple of computers with extra fans on them and electric heater with a fan, so there's some background noise. Some times I'm sitting 10-12 feet away from the scanners. I end up with the BC895XLT turned up past the halfway mark most of the time, even when I'm sitting near it. The volume on the PRO-2032 was usually set at about 30% and never up to half way. Some of it seems to be that the BC895XLT has a deeper tone which doesn't carry as well over the fan noise, but I still wonder if these have a bit of a week amplifier or something. Is there any internal adjustment to change the volume or tone? I understand that you can't get a service manual or I'd look. I got it mail order and don't have the slightest idea where I could go look at one to see if they all sound the same or if mine is somehow underpowered in the audio department. Other than that, it's great!

Thanks for your time.

Message-ID: <34CD0636.6263@ibm.net>
Source record: 172481

I have two Ni-Cad battery packs for my Uniden BC2500XLT that won't take
a charge anymore. The 2500XLT works fine when running from AC thru the
Ni-Cads. I have had these packs for about 3-4 years. Do they normally go
bad like this? Is this a recoverable problem or do I have to buy a new
battery pack? If I have to buy - any recommendations on where to get
best value?
Thanks for your help.

You mean the cable? You can buy it from a variety of places such as www.scancat.com and www.scanstar.com but you can make it for a lot less than what they are willing to sell it to you for. www.interplaza.com/bensware has the instructs to do it. If you want to buy the software and cable as a package, go to www.ipxnet.com/enterdev (not sure on URL, but if you do a search for enter dev or pc895, you'll find it). They have the best deal going...

From: morrisonj@usa.net
Message-ID: <6aglo5$at9@sjx-ixn7.ix.netcom.com>
Source record: 172529

What's the general scheme of LAPD's radio layout? I've seen ids such as "5-A" and "6-C" and also ids such as "149" and "181". Which is used by units on the air? Are all LAPD radios now programmed with everything? If so, I'd assume that all units are carrying at least Astro Saber II's?

Just wondering. Thanks.

I just read that the FBI did the recording. Anyway its really a tape
of buthead so its not located at the site anyway.

IF it was a man's voice, you were hearing WWV, the time signal. If a womans' it was WWVH. It's been a long time since I have had my SWR turned on, but it seems to me it was about every 5 meters or so across the dial... any SWR (Shortwave Receiver) should have no problem in finding it. It was generated by the National Bureau of Standards. Wish I could remember more, but it's been over 20 years... :-) BTW, it'll now say "Coordinated Universal Time" instead of GMT last time I listened to it.

Hello,
I was wondering if there are any mods to a Pro-2038 scanner? I have looked at several mod sites and have found no information.

Thanks,

Roger

3100. Scanner Receiving Problems

Newsgroup: rec.radio.scanner
Date: 1998-01-27 00:00:00 UTC
From: bobbym2362@aol.com
Message-ID: <19980127055501.AAA10373@ladder01.news.aol.com>
Source record: 172290

Attatched to the scanner in my home is a standard Radio Shack magnet mount scanner and ham antenna. I have placed the antenna on the roof of the house to pick up better reception, since there's 50 feet of coax cable available. The coax runs through my window (I close the window on the cable, but without crushing the cable). The antenna, which I'm told needs to be placed on metal for best results, is mounted to a large piece of sheet metal, which also helps keep the antenna in place because of the magnet.

The reception always starts off really well, but after several months startes to gets worse, and even becomes "crackly" and breaks up, even units very close to my home. This has happened 3 times already... how can I prevent this from happening again?

3101. Re: PCR1000

Newsgroup: rec.radio.scanner

Gary,

>>BTY I think the ICOM marketing picture of the PCR1000 antenna
>>attached to a monitor is hilarious. <g>

>They are attempting to show the PCR-1000 package in the advert as
>invariably someone wants to " see " the included antenna.

Of course! And from a marketing dept point of view it's a great pic. But think about all the tech support calls from folks that set it up "just like the picture in the adds". Being the author of XTree / XTreeGold, I've walked a lot of people through setting up hardware so they could run my programs. Sometime, somewhere, this will happen...

UPS truck is driving away, package is open, the stuff is on the desk. Lets see... the small black box will fit perfectly on top of the modem. Serial cable... just like the modem... plug it in. Power supply... hmm... out comes a spare extension cord because the power strip won't hold another transformer. Antenna... oh, yea, sticky-tape to the monitor and plug it into the black box. Power everything up (with fingers crossed)... YES! Windows 95 didn't crash! Load the scanner software... take a guess at COMM2... poof! Instant... noise.

Now don't take me wrong here; I've done my share of dumb things over the years. Uh, still do too. <G>

Jeff

Probably not essential but I did it anyway to make a good connection.
What I did was work the shim stock under the positive connector,
between the connector and the plastic and then made a small solder
tack. By the way, the link on your page to Cathey DeViney's mod
appears to be dead. I was not able to access it.

This is not about frequency *measurement*. Measurement is not
required with the technique Bill describes.

An external speaker(one that faces foward)is
the easiest way to improve the audio and makes a big difference over the
built in speaker. True for most radios.

Dear Spacely Sprockets;
If you want a damn good antenna, use a CB antenna(adjustable), you might want to experiment with a standard am radio retractable, by the way check your ohms. I've been playing around with antennas for about 12 years now and find this is the way to go , unless you are trying to single out one particular band.

Hi,

Would you guys know how to modify an Australian/European 220XLT/230XLT
for 30-50Mhz ? Our versions come out of the factory with 66-88MHz, however i'd
like to have mine the same as the US version. I'd suspect it's a matter of
adding removing a diode or resistor, its knowing which one thats the problem.

Mike

3114. Uniden 220/230XLT 66-88MHz

Hi.,

I'm hoping someone can help me out (please!).

I've got a Uniden 220XLT which has the Australian VHF lo range of 66-88MHz, and I need the 30-50MHz range as per the US versions of these scanners. Would someone out there know which diodes or resisters are necessary to delete the 66-88Mhz range and install the 30-50MHz range?

Any help would be appreciated..

Thanks,

Mike

Is any part of the coax cable coiled up? Do you have slack in the cable that causes it to cross over on itself? The reason I ask, is that I too, had bad scanner reception with antenna cable that was coiled up. In addition, It caused interference with TV reception in every set in the house. Once I got a cable that was short enough to run directly from the antenna to the back of the radio without coiling or crossing over itself, reception on the scanner improved, and TV interference cleared up.

I really should type up a standard response to this question since I answer
it about once a week. :)

The scout is a pretty good product, have had mine for over a year.
It works well to pick up anything in the near field. Range is definitely
dependent on the signal strength, power output, etc. Ive found it quite
useful for finding everything from fast food frequencies to handheld
walkie talkies. As long as you use a decent antenna, perferably one
tuned to the band you're looking for, you'll get decent results. I use
simply a dual band antenna, and it still works well.
The features like 400 memories(255 hits/memory), light, vibrate/beep,
adjustable gate times let you customize.

I paid like $500 awhile back - and I think they are onsale for $349 or
something now.

Well worth it - and a fun toy to boot.

Keith

Steve (COMSTA06@webtv.net) wrote:
: Mine works fine. Although i don't use it that
: often. When you want to find a freq, it's handy
: to have. Ask yourself, is it worth $400 to find
: new freqs? you could buy another scanner for
: the money.
: If you're going to get one, just be aware of the
: limitations of the Scout. It will only record a NBfm signal. It's most
: sensitive with the telescoping antenna, but not as easily concealed.
: It's least sensitive with the DB32
: antenna, but will slip easily into a pocket.
: Range depends on the antenna you're using
: on the Scout and the output power of the
: transmitter you're trying to catch.
: Hope that helps a little.

Bryan,

You put your finger right on the problem...and it has NOTHING to do with
"800 MHz".

A poorly conceived, designed, bid, built and maintained radio system is
just that. It doesn't matter what band it occupies.

Monitor Safely!

Brian

Hmmm, let's look at this....

1) "Obviously a very new ham"
You may have me on that one-I've only been an amatuer radio operator for a little over a year now.

2) "Little experience or knowledge in radio..."
Sorry, I have to disagree with you there. I am a EE who MAJORED in communications-SPECIFICALLY radio comm. You oughtta seen my senior design project. I built an 11 meter antenna that would autotrack a moving transmitter. In addition to this the antenna had adjustable reflectors&directors so that the fw/bk gain could be adjusted on the fly with tracked motors. The antenna itself sat on a rotating platform and could be adjusted on the go by the computer. Pay attention here so I don't lose you-the computer interface board was DESIGNED & BUILT by ME specifically for this project. Before you ask-I wrote the control software BY MYSELF as well. I did this in a span of only six weeks-with extremely little help from my instructors. I have since toyed with the idea of adding some type of mapping capability to the system so that the antenna can make a more 'intelligent' decision on which way a target is going to go.

3) My onlince .vcf file.
Hey-if you don't like it then TOO DAMN BAD. I get so tired of whiny, cranky, people who dog my Netscape Communicator. I am glad that all of you follow Mr. Gates like the brainless and mindless little drones that you are. After all somebody has to keep the guys stock price in the upper stratosphere. If you are using something else then GOOD FOR YOU. Just leave my browser/mail package the HELL ALONE. I don't pick on your software package, so please extend me the same courtesy. As for not knowing much about 'online' or 'internet' I would recommend that you close you be careful with that-I COULD decide to SHOW YOU (PERSONALLY) how much I really know.

All in all sir, I find you rude, borish, and contemptible. Mr. Cheeks at least has the saving grace of sharing his knowledge (other than that he fits your categorys too). I am embarassed to share a hobby with you, and I am truly sorry that you reside in this NG. It would be a much better place without your influence. (Take this thread for example).

"May a flock of pleasant birds hover over you for an eternity"

Cliff.

Now take my damned .vcf and shut up about it.

I know your comments are directed to the mindless one, but I just gotta say:

> I am glad that all of you follow Mr. Gates like the brainless and mindless
little drones that you are.

All of us don't "follow Mr. Gates like... etc." After trying Netscape and IE on PCs and Macs, I happen to think it is a superior product. What's wrong with that?

>After all somebody has to keep the guys stock price in the
>upper stratosphere.

The stock price is where it is because of the company's value (both real and perceived) to investors. IE is free, so it wouldn't appear that that particular product is responsible for Microsoft's high-flying stock. Now take Netscape on the other hand... They have been charging for their browser and the company is going down the toilet. Now, they going to give away the browser.

> I would recommend that you close you be careful with that-I COULD decide to
SHOW YOU (PERSONALLY) how much I really know.

Again, I realize this is aimed at the Mackeral, but I'm curious... what could you really prove, I mean if you had to? Hack his ISP, grab his credit card info and rack it up?

Realize that at $5 a crystal, it would not take long to equal an
inexpensive programmable scanner.
That is the biggest reason my crystal scanner is sitting in a drawer
somewhere...
You won't find cell phone crystals for your scanner, and there are 25
different frequencies for cordless phones in the 49mhz range alone.

Wrong-O rubber duck....First of all...they were reportedly face to face conversations, not phone conversations...and there are NO laws against recording them. Second...if they were phone conversations, if any one participant in the conversation agrees to it's being recorded...then it is perfectly legal.

AND...I no longer have to tell you I'm recording the conversation, something you had to do several decades ago.

This scanner is up for auction on Onsale. To place a bid, please go to:

http://www.onsale.com/category/inv/00283954.htm

Starting bid is $105.

Description:

Radio Shack PRO-46 Police Scanner. Has 100 channels (10 banks), 1 Priority, back light, full 800 MHz (including HARDWARE cell mod). I'm also throwing in NiCD batteries, ac adapter (charges batteries right in unit), Monitor America.

In great shape. This scanner is portable.

Please do not bid on the news group or by email. Feel free to ask questions in email though.

Do not listen to cellular phone conversations. It's illegal.

Marek

Here's the BEST advice I can offer....Take that over priced Rat Shack
unit (which is made by Uniden under license and is actually a BC235XLT)
and get the Uniden model. You'll save tons of $$ plus you'll get a 2nd
battery with charging cradle.

There are some options:

- move

- install an attenuator in-line

- install a notch filter in line

- purchase a more selective receiver

- buy several better radios and dedicate them to different bands

Hi,

Just got my BC895XLT and I love it. I'm a 'newbie' at this Trunk Tracking stuff so I need some help (PLEASE).

I have programed in the Trunk freqs. just fine, along with the scan lists, but what I'd like to know is all about this fleet map stuff. The owners manual is vague about this. How is this done? Please, I need step by step instructions.

Example, B0 = S12, B2 = S0, B3 = 80

This is greek to me. How do I enter these in? What are they used for? Do I have to use these?

I thank you in advance for any and all assistance.

Mike

I have an 8500 and agree that the relays are a problem, but, with the first boundry at 500 vs 400, you can at least program all the VHF and UHF you want without that problem. I have a seperate bank for the few 800Mhz conventional channels and they don't chatter within that band. If you truly want to scan 800 channels with vhf/uhf channels, then be prepared for noisy relays, and we wonder how good that is on them.

ljb@accessone.com (Lee Bordenet) wrote:

I'm very happy with my new BC895XLT except for one small thing. The audio just doesn't seem to be as loud or carry as well as my old PRO-2032. It is in a room with a couple of computers with extra fans on them and electric heater with a fan, so there's some background noise. Some times I'm sitting 10-12 feet away from the scanners. I end up with the BC895XLT turned up past the halfway mark most of the time, even when I'm sitting near it. The volume on the PRO-2032 was usually set at about 30% and never up to half way. Some of it seems to be that the BC895XLT has a deeper tone which doesn't carry as well over the fan noise, but I still wonder if these have a bit of a week amplifier or something. Is there any internal adjustment to change the volume or tone? I understand that you can't get a service manual or I'd look. I got it mail order and don't have the slightest idea where I could go look at one to see if they all sound the same or if mine is somehow underpowered in the audio department. Other than that, it's great!

Thanks for your time.

I too have noticed this in general about Bearcat scanners. I have often wondered if it had anything to do with the 10.7 vs 10.8 mHz IF on the Bearcat vs Regency (Radio Shack) scanner.

Just a thought

Does anyone know if the "European" version of the PRO 26 CPU and the US version use the same default step size and mode for the scanner bands? I've heard that, in the UK, AM is used in the 152MHz band. I'm wondering what mode the European CPU selects in that band. Although the mode may be manually changed in this radio, this would be inconvienant when programming alot of channels. Thank you for any information.

I've been using renewals in my 2 meter handhelds with wonderful results. But, as stated above, don't run them down to the point of warning lights coming on b4 I recharge them. Don't have the memory problems like Ni-Cads and give you a higher voltage. Love them.

It can't be modified like the older scanners. The microprocessor has all the band limits programmed into it. You can change the micro to the Canadian type. That is the only way around it. It's a boaring thing to monitor anyway!

An AOR 5000+3 is now available, but I've not tried it.

I've tested both an AOR AR5000 and ICOM R8500 and published
full length reviews and comparisons in Monitoring Times magazine.
They are both great radios, but I chose to purchase R8500 after
testing both.

Here are the passages I wrote in my FAQ "Buying a Used Scanner:"

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage
super receiver. Good sensitivity throughout. AM, SSB, CW,
FM detectors. Frequency readout to 1 Hz. More features
than any other radio. DTMF reader and RS-232 interface
included. Multiple settings for IF and AF selectivity,
attenuator, AGC, deemphasis, etc. DB9 RS232C connector.
Negatives include low contrast LCD display and difficult
user interface. NFM squelch closes slowly, causing noise
burst at end of each NFM transmission. Electromechanical
relays click at various frequency boundaries, including 400
MHz, producing a clickety-clack noise -- annoying while
scanning banks of mixed band frequencies. Great radio,
otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob
Parnass, in Monitoring Times, December 1996.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks
of 40 channels although bank sizes can be changed. 100 Auto
store and 100 Skip memories but that can be increased by
reallocating channels from the conventional scan banks.
Fixed and programmable step sizes. Relays clickey-clack
while scanning across band boundaries. Triple conversion,
First IF is 48.8, 778.7, or 266.7 MHz, depending on band.
Second and third IFs are 10.7 and 0.455 MHz. Weak to
moderate cellular images starting near 1106 MHz. Rugged
construction. External power supply. DB25 RS232C
connector. Audio peak filter. Ok scanning and great
searching performance. See "ICOM R8500 Receiver," by Bob

Parnass, in Monitoring Times, January 1997.

Reprints of articles from Monitoring Times are available
for $3.00 US each plus a self-addressed stamped envelope from:

Grove Enterprises, P.O. Box 98, Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

Note: I don't get any part of the $3.00.

I've enjoyed owning and used a NRD535D for a few years
and much prefer the NRD535D over the AR-5000 for shortwave utility
listening. Its variable bandwidth and IF notch filter
are two important features lacking in both the AR-5000 and R-8500.

That said, I found the R8500 better suited for SWL than
the AR5000 due to its IF shift and AF peak capabilities.

The AR5000 I tested had more uniform sensitivity in the
1000 - 2000 MHz range than the R8500.
The AR5000 has more features than the R8500 for UHF/VHF
monitoring.

The AR5000's LCD contrast is poor, making it more difficult to read.
I found maddening its complex multi-keystroke sequences, required
to perform simple operations. Its 100 channel memory banks
are too large for organizing frequencies.

The R8500 is built massively on a cast metal chassis.
The AR5000 is smaller and much lighter in weight.
I found what looked like a few extra components "tack soldered"
on the bottom of at least one printed circuit board in
the AR5000 I tested.

Overall, the AR5000 is more flexible (except in memory bank
organization), but the R8500 is better built and much easier to use.

Good luck.

Mr Bill Cheek

John Mackey is largely correct about tuning tools.
>The beauty of your

>> tuning technique is in its simplicity and John is just

>> trying to obfuscate the issue by inserting irrelevant

>> nonsense and non-facts into the equation.

I get just a little tired of some of this crap!!
If anyone would bother to read some of the fundamental theories
and works of the 19 th century French scientist MR.Lissajous,
one might learn alot about frequency measurements and things that
influence those measurements. Most people that have had some formal
training in electronics know that phase angles critical to accurate frequency
measurement are not possible when using metallic tools for tuning.
Please investigate this further or you will show your lack of knowledge.
Rick

Bob,

I'm unable to get to a location for a hands on test of the receiver and have a couple questions. How loud are the relays? (I'm considering my wife here... she's very tolerant of my toys, but I don't want to press my luck! :-) What are the band boundaries where the relays activate?

> and they can't publish the mod.....anyone know how or
> what site might have the info???
> Tnx Jim KW3U
> ancient ham using straight key
> and woodburning radio
Hey Jim, the mod is:
(1) Take the back off the radio
(2) Look on the [mostly] flat circut board where the speaker is mounted.
(3) To the LEFT of the speaker (assumming the antenna is on the top)
(near right side of the radio) you will see a SMALL *GREEN* chip mount
resitor...maybe it's a 0 ohm jumper, I dunno..but anyway
(4) Take the resister off...you can use your soildering iron, but I
found that if you can grasp it with something like forcepts or
heavy-duty tweasers, you can pull it off...be careful, if it goes flying
you might never see it again...
(5) put the radio back together and hold down the F key while turning on
the radio (this will completely reset it).

You now have RX from 136-173 and TX from 136-160 (with Alkalines or Pwr.
Sply) OR about 136-153 with NiCads..

Steve,
Maybe try to dtermin the exact freq. of the pager (almost all pagers
are between 152 and 153 MHz)..try 152.24 and/or 152.48. Then when you
fine the freq. you can tune to it and take the antenna off...now drive
around town and see where you get the bigest signals...find the town and
call the people and complain...I doubt that would do anything, though :ï¿½

3203. WTB: Icom TV-R7100 TV rec. adapter

I have a RS Pro-62 handheld in very good condition. It's only a year old and includes new Ni-Cads (6), the custom leather case, a new double-duck 12' antenna, RS adapter\charging unit, and last but not least a GRE Super Converter II. I have the box for the scanner and for the converter too. I would just like to know what I could expect to get for this package if I was going to sell it.

3205. train scanning: your antenna?

Newsgroup: rec.radio.scanner
Date: 1998-01-28 00:00:00 UTC
From: caj@urth.autarch.com
Message-ID: <6aobna$dfq@urth.autarch.com>
Source record: 172187
Cross-posted to: misc.transport.rail.misc,rec.railroad,alt.railroad,rec.radio.scanner

I'm currently following the local trains with an improvised vertical dipole cut for 161MHz and taped on my wall. Although I'm not even feeding it with coax, just a short run of 2-conductor speaker wire, it seems to beat any of the mobile antennas I've tried on my RS Pro-26 so far.

(to make: go buy some 2-conductor wire that ends on one end with a phono plug. make sure it's the kind that you can pull the 2 conductors apart, like speaker wire. Get a phono plug to BNC RF adapter. Split the 2 conductors apart for about 17.5-18". Plug phono into BNC adapter and that into your scanner. Orient the wire like this:

```
|
|
|
|
------------> to scanner
|
|
|
|
```

The upper leg of the dipole should be the one that goes to the center of the BNC plug. The feed line should run for 18" or more at 90 degrees in relation to the dipole. The feed line should be as short as possible, because it really sucks. Get the antenna up as high as you can. I chose the adapters as I did because no soldering is required. Constuction time is about 5 minutes.)

Anyway, I'm finally hearing the EOT device on some local trains, which I wasn't before. I'd like to be able to hear all the yards within 20 miles clearly, which I'm not doing yet. Think this is reasonable?

Question: what are you using that really kicks butt? Next for me will be a 1/4 wave vertical with radials for ground plane and then a properly fed dipole. Going to try to get these guys outside, and up a little bit, but I live in an apt. The vertical should beat the dipole for this, no?

Anyone tried a marine handheld antenna for portable use? What kind of antennas do the handhelds the rail guys use have? The RS center-loaded whip is the best mobile I've tried so far -- you need to adjust the length for the best reception.

How about a J-Pole? Still reading up on this antenna -- need to get to a library, just been using dejanews so far. My impression is that this is fairly omnidirectional with more gain than a 1/4 wave vertical?

I don't care about the other bands -- just wanna pick up trains.

A full microprocessor RESET can be done by holding down the number
3 key and the number 6 key as the unit is powered on. A full reset
clears all memory banks and restores them to factory preset frequencies
in addition to solving any lock-up problems that may occur.

There is also a small reset button inside the case on the rear of the front
panel (near the top). It is very hard to find. It is next to a switch that
selects the RS232 baud rates of 4800 or 9600 (default is 4800).

find a dealer that will sell you a "notch filter" tuned to 154mhz. These can drop the pager signal by 20-40 db. this should solve the problem while still allowing for reception of everything else.

Bob,
There is no sensitivity adjustment for the Talkabout. I tried the Motorola headset and found that in a noisy hall, the vox would trigger the transmitter from room noise, so I used PTT. Also, when in VOX mode, there is only a visual indication on the Radio that the transmitter is on. If you can't see the unit, you won't know that you are in transmit mode.

Cheers,

Bob Anderson

>
<lots of stuff snipped for brevity>

they do listen...to the cash register. That's the only real way consumers make a difference....when there's lack of competition. And in the case of trunk trackers...right now, there is a distinct lack of competition.

when, and if, someone else comes out with a trunk tracker with all the bells and whistles that the 235 has, and uses off-the-shelf batteries and meets the 235's selling price....if the battery pack is a concern, people will quit buying the 235 and start buying the new unit. If it's not a concern, then they'll keep buying the 235's.

That's how you get to "vote" on the features.

Of course, manufacturers do survey users, to find out what features users like and those they don't like. If they get a strong enough response one way or the other on a feature, they do take that into consideration in future designs.

But competition is the biggest "survey" of all.

3221. Intermod Problems, Please Help

Newsgroup: rec.radio.scanner
Date: 1998-01-28 00:00:00 UTC
From: Some Guy <madscanner@hotmail.com>

Can mounting a Radio Shack discone antenna on the same mast as your television antenna bring in more signal from television stations than the discone normally would alone, even if elements from the antennas aren't contacting each other? I have a scanner attached to just such a set up, and it gets an incredible amount of intermod from television stations. Because I'm only 20-30 miles from the transmitter site for Southern California TV stations, I don't know whether moving the discone would solve the problem out of fear that it's simply my own proximity that's resulting in all the intermod. Any expert opinions?

If it's more likely the proximity is at fault, where can I find some sort of notch filter to notch out the television band (the offending intermod is coming from stations in the 7-13/175-215 MHz area)? I've thus far called HRO, Marvac Dow and a few other electronics shops, none of which have anything they can offer. This is driving me mad, and I'd appreciate any info you guys might be able to offer...

Brian

> Please reply in the group

The answer to your question is yes. Both GRE and Scanner World USA said that the converters for handhelds and for base scanners work with any scanner that can recieve the 410-512 MHz band and has a BNC connector. I have used it with the 62 with no problems at all and because it has triple conversion, the audio is clear. My cousin also uses the same model converter with his BC-120 handheld, but since it is only a double conversion unit, the audio is not as good. He also has trouble when the converter is on and a transmition comes through on the real 410-512 band because, if the signal is strong enough, it will leak through when trying to hear something that has been converted down to the same frequency.

I am new to the world of ham radio and am hoping to recieve my technician license soon. Since I am new to ham radio, I am not sure what brands of radios are better than others and which models are best. I would like to buy a 2 meter mobile rig, preferably one that is under $300 dollars. I have thought about the radio shack htx-242, the icom ic-2000h, the alinco dr-140, and the kenwood tm-261a because they are all under $300 dollars. I was wondering if anyone could tell which of the above listed radios, or any other radio for under $300 would be best for a beginner. Any help or comments would be greatly appreciated.

Thanks

Brian

I have heard of a company that takes capacitors, resistors, inductors
and integrated chips and makes their money soley from the design,
manufacturing and selling of these products!

Without mentioning what is actually made (I want to see if you can
come up with ideas and designs) can you come up with some ingeneous
designs that would revolutionized the electronics world. Remember,
they must be LEGAL electronic designs that don't happen to have a
thing called a patent.

Thank you for padding my pockets.....

I have a Power PC Mac that I would like to trade for a nice scanner.
This is a 7600/132 with 48 megs of ram and a built in video card.
The operating system is Mac OS 8.0. I have keyboard and mouse.
I am lookin for a full range scanner up to 1.3 Ghz. I am reasonable so let
me know what you have of value to reach this value.

Chicago area and will ship with the right trade.

Jim-
There isn't much you can do to increase the freqs range outside of the original missing 800Mhz freqs that you have already recovered. The extra channels may be a possibility by adding some more memory chips. You can find the basic theory and what to order etc. with Bill Cheek's Book "The Ultimate Scanner." I can't pull up the http://support.tandy.com/support_electronics site right now so I couldn't see if they were using the same ICs as some other models. Another thing to look at is the PROgramit interface. It could swap out all the the channels pretty quickly by use of frequency databases on your computer. You can find out about it at http://www.qsl.net/ka2pyj/.

When I was living in Snohomish, Wa; I used to listen to the Bn main line from Everett to Wenachee with no problems. Wanted to get Delta Junction and both classification/holding yards to the west and north of Everett. This distance as the crow flies is approx 9 miles. I used a 'stacked' dipole at full wave. Bear with my ascii drawing.....

```
/ /
/ /
__________/__________/

----------\----------\ FRONT ( toward signal that is
wanted. )
\ \
\ \
```

Make it 45 degrees between the angled elements, and put it flat on your ceiling. I didn't even do any impedance matching! Used 24 gauge telephone wire that was stripped, made loops in the ends, and tacked the whole thing to the ceiling. Boy, used to get some strange looks from visitors....

I made a tag for the Radio Shack telescoping whip antenna (P/N
20-006). It shows the adjustments for 3 different bands of frequencys.

Just print it using Microsoft Word, cut it out, and tape it to the
lower section of the antenna.

My BC220XLT has a data skip feature, which skips channels with no modulation or a constant tone after a few seconds. It's not very useful since most pagers only transmit constant tones occasionally. Furthermore, it often skips the end of transmissions after a brief pause.

According to MT, the optoelectronics interface can restore cellular
while the scanner is under the control of the computer, not the
scanner's CPU.

You friggin nitwit, zero-beating (heterodyning) is a part
of the adjustment procedure of X-301 in the PRO-2004/5/6.

Don't you ever READ with a contemplative, open mind?

What a sorry, low-life, imbecilic idiot nincompoop you are.

Ok Mr Mackey, I am not you by any means.
Excuse me if AOL does provide a service and I guess it gets to the internet.

All******** whatever is slow and weak.
Goddam, talk about paranoia setting in on a NG.
RCL, BTW would fit the NG topic closer than most posts.
Resistance,Capacitance and Inductance are the basic parts of anything dealing with frequency. I must say that I do own a Scanner and have enjoyed the hobby alot. After seeing some of what goes on here in the nameof scanning. I am glad it is not Two Way.
Bill Cheek does not know everthing and we should have a fair exchange about tuning methods without his immature attitudes.

Yes Bill and the rest, AOL is able to post without doing it at the DOS prompt or in UNIX code.
Rick

Thanks for your comments. I spoke to a friend of mine who has been a long-time Ham and scanning enthusiast shortly after my original posting. Apparently the problem has been brewing since two weeks after the system was first brought on-line, when a fire truck at the scene of a gasoline fire attempted to contact the station and was unable to get a signal through. The old low-band system that was intended as a backup is now being used as the primary for much of the affected area. On a public-safety issue like this one would think that the inclination would be to just do things right in the first place--but governement procedure frequently seems to work in the opposite direction.

Call your local hobby shops and see if they make battery packs.
Chances are you'll find at least one that does. Take in your old pack,
they'll replicate it with higher capacity cells and much cheaper than
you'd pay at a scanner "outlet". Most times they can make one inside of
15 minutes or while you wait.

Folks, it's not very difficult to make your own ni-cad packs. I'd like
to think most of us can solder right? Just take a minute to learn how
to "cold solder" or simply buy pre-tabbed nicads and avoid cold
soldering all together. Solder them together, wrap with tape. DONE!

3257. A very (legal, believe it or not) good use for unblocked scanners

Newsgroup: rec.radio.scanner
Date: 1998-01-28 00:00:00 UTC
From: mtbikerno@spamnojps.net
Message-ID: <34cef824.4404425@news.jps.net>
Source record: 172245
Cross-posted to: alt.radio.scanner,rec.radio.scanner

After I got my Airtouch Talk 20 unlimited nights and weekends calling plan, I used my frequency counter and Pro-2006 to find all the cell frequencies I used while talking on the phone at home. Now if I'm having a long conversation and get tired of holding the thing up to my ear or just need to put the phone down I can still hear the other person and carry on a conversation as if I was on a speakerphone. Of course I have to raise my voice, but so what. And since I have all the frequencies of the tower I use in the scanner it will follow it if I change cells. I bet the whining yuppies in Congress never thought of that before passing thier stupid anti-scanner laws, eh?

I have just gotten ANTOHER Pro-26!

I would like to trade it for a Bearcat 3000XLT.....
I dont need 4 Pro-26's! These radios kick ass...not to mention their
ability to EASILY receive cell calls!

Want to see the specs of the radio? Come to
http://www.n-link.com/~friendly/pro26.htm

This radio is in NEW CONDITION and has box, and all manuals...

Bearcat must be in new/good condition and NOT BEEN MODIFIED or opened...
I will check before trading....I have the service manuals and test equipment
for
the Bearcat.....so it will be checked....honest traders have NOTHING to
worry about....

PS You must send your radio to me FIRST, if that's a problem then don't
waste your time
emailing me....

Sorry, but seen to many RIPOFFS on the usenet..

Cute trick, applicable to wireless phones around the house, too.

Just don't go recording yourself or you'll end up having to take
yourself to court for violating your own rights. ;-)

I live in Albany, NY and currently just purchased the trunk tracker Uniden Handheld. Having some difficulty programming and I thought some of you folks who have always been very helpful can answer some of my questions or frustrations might be a better word. We seem to have to cities that are currenty
trunked. I am following all the instructions it seems but am having a problem when I put in the second city. This is what I am doing. I am hitting the trunk button and waiting for the 2 beeps. Got that no problem. I am pushing 1 to enter the first 14 freq into bank one to search. Search starts no problem.When I go to do the same thing in bank 2 to enter the other agencies channels and search I get an error message. Could someone either e mail me or post to group. I have an 800 number at work that I will E mail if someone can possibly walk me through Many thanks

dac_nospam@compuserve.com (Don Curtis) wrote:

>Wrong-O rubber duck....First of all...they were reportedly face to face
>conversations, not phone conversations...and there are NO laws against
>recording them.

Not so.

Depends on the state. Each state is different, and state law
superseded federal.

In a one party consent state, only one party needs to give permission
for *any* conversation to be monitored or recorded, whether in person
or over the tellyphone.

In a two party consent state (read: ALL party consent), all parties
must give their permission. Doesn't matter if over the phone or in
person. Maryland is a two party consent state. Therefore everyone must
give their permission, or a felony has been committed.

> Second...if they were phone conversations, if any one
>participant in the conversation agrees to it's being recorded...then it is
>perfectly legal.

Again this depends on state law. The above is true in one party
consent states only.

Don't confuse federal one party consent with state X party consent.
State law applies.

>AND...I no longer have to tell you I'm recording the conversation, something
>you had to do several decades ago.

You need to ASK first and receive permission as mandated by state law.

Note with all of the above, if you are not a party to the
conversation, you never can record, meaning you cannot tap a phone
call you are not a party to.

Maryland is the 3rd toughest state in the union for prosecuting
electronic surveillance violations. No defense, and the state has no
sense of humor. A few private detectives are forced out of business
each year for playing these games. And I testify periodically as an
expert witness in my home state of MD on electronic surveillance
violations, which include face to face meetings as well as phone
calls.

I believe you are referring to Scanner Master Publications in
New Hampshire. They publish guides for Florida, , Massachu-
setts, NY Upstate, Virginia-Maryland-DC, Illinois, and NY Metro.
I don't have their address here but their books are available
from Bob Grove in Brasstown, N.C. (www.grove.net).
U.S. Scanner Publications, during their existence, compiled
guides for all the US states. They were basically a recompilation
of FCC records. Since US Scanner is defunct, your best chance
of finding one of these is second-hand. Hope this helps.

>jim

Another thing to consider is that the frequency has gone out of
service. As a controller, it is rare to go a whole week without a
frequency going out. We have backup frequencies that are usually at
different sites, which could change your reception. Also, UHF is only
used by the military, and it is sometimes turned off since it won't be
used for days at a time.

Mark,

I'm not real clear on exactly what you are doing AFTER you get the
first system programmed. But to make things easy, turn the radio off
then back on, enter trunked programming mode (two beeps), select bank
2. You should see P 31 8xx.xxxx or maybe P 31 000.0000 In any case,
program all the frequencies and fleet map just as with the first
system and you should be ok. Good luck.

> tuning methods without his immature attitudes.

This isn't about "tuning methods". It's about how a basic hobbyist can save himself $50-$100 and do a laboratory-quality adjustment in the PRO-2004/5/6 scanners by following a simple, clearly stated procedure.

That is what this thread is all about....and that's ALL that it's about.

Our Great Obfuscator, John Mackey, chose this topic to launch another attack on me. And I am not going to put up with that hare-lipped, bucktoothed, fat-assed imbecile under those kinds of circumstances.

And.......like it or lump it....I *do* know everything there is to know about this particular thread. There are no uncertainties and there are no variables.

Sorry to burst your flatulent bubble.

I'm considering the Motorola TalkAbout with the VOX Earbud/in-line mic for a hands free application where I will be moving 10-30mph (kite buggying - think of bicycling if you don't know what that is). Will I have trouble with wind noise keeping the VOX mic on constantly? Does the TalkAbout VOX circuitry have any sensitivity adjustments? Would a simple foam microphone wind screen prevent problems?

Thanks in advance...
Bob

Hi!

I'm about to buy a ubc9000xlt (european version of bc9000xlt)
I have a ubc3000xlt now but changed my mind and want a base-station...
How is ubc9000xlt?! considering
images/birdies/intermodulation/sensetivity/selectivity etc?

/ Regards Kristian

I take the Rec Out of my scanner and send it through my soundcard on
my computer. I can easily control the sound level through my computer
and can easily mute it.

Maybe you should replace the volume potentiometer that is calibrated
differently, then you wouldn't essentially have to turn it up so much
to get the same results. If you happen to watch the movie "Spinal Tap"
you would have noticed that they had an amplifier that went up to
"11".

"when you have the guitar up all the way, the amplifer up all the way
and you need a bit more....where are you going to go? This goes up to
"11".

>So what should I do to get rid of the offender on my scanner so I can
>enjoy the other users?

The first thing I would do is verify that the problem is close by.
Take the scanner to other locations and see if the problem goes away.

If the problem is in fact a nearby transmitter, try attenuating the
signal. Replace the standard antenna with a short piece of wire
soldered to a connector. Trim the wire a quarter-inch at a time and
see if the overload is reduced. Keep going until you find the best
length. The optimuml length may in fact be an inch or less...which
tells you something about how effective an antenna your standard
rubber duck is !

Intermod and front-end overload are non-linear phenomena. As the
signal strength is reduced, the filters in the radio become more
effective. They reduce the offending signal more in proportion to the
desired signal. So while it may seem illogical, reducing the signal
actually improves reception.

Too loud.

I didn't scan across boundaries with the R7000, R7100,
or R8500 because I didn't want to wear out the relays and
their clicks were too loud.

>What are the band boundaries where

All good ideas. Some not practical though. Some are expensive or require
some technical ability.
Can I offer a simple suggestion? Try tuning 5 kHz above or below the
frequency that you want to monitor. The intermod may disappear and the
signal quality of your station may be acceptable.
It's not a perfect solution and it may not work at all, but it's cheap.

> John Mackey is largely correct about tuning tools.

That was *never* at issue. However, he is "correct"
only because it is a general rule of thumb. But that
"correctness" does not come into play on the conditions
and circumstances that are germane to this thread.

> The beauty of your

> tuning technique is in its simplicity and John is just

> trying to obfuscate the issue by inserting irrelevant

> nonsense and non-facts into the equation.

John, The Obfuscator..... yes, THAT is an issue.

> I get just a little tired of some of this crap!!

Why? I mean, you *do* have complete control over your
computer, do you not?

> If anyone would bother to read some of the fundamental theories
> and works of the 19 th century French scientist MR.Lissajous,
> one might learn alot about frequency measurements and things that
> influence those measurements. Most people that have had some formal
> training in electronics know that phase angles critical to accurate frequency
> measuremen are not possible when using metallic tools for tuning.

But that is moot, not relevant, and far beyond the context of
a post that I made some time ago with respect to precision
adjustment of X-301 in the PRO-2004/5/6 scanners where an
accuracy of +/- 5 Hz is specified. Phase errors at 10 MHz where
accuracy of 1 part in ten to the 7th are feasible have no bearing
in the slightest, particularly in *this* issue.

The matter is one of practical application, albeit even
an exception, if you will. It is *not* a matter of
theory and rules of thumb.

Furthermore, the reference oscillator "cannister" apparently is
designed to accept metal tools. It is shielded inside and
out, and the adjustment is well above the active and passive
elements, and *is* at ground potential. The inserted tool

never comes near any components other than the ground side
of the adjustment capacitor.

But the simplest empirical determination easily proves
my case. And my case is not one of "honor", "integrity",
or anything of the sort. It is a slick workaround to
benefit the casual and advanced hobbyist.

> Please investigate this further or you will show your lack of knowledge.

How about several YEARS of investigation of this? It *is*
a tried, true, and proved procedure. I didn't use the word
"empirical" to hear my head rattle..... or to have you
wantonly overlook its meaning.....like Mackey did.

You are FREE to try it yourself. I defy anyone to try it
and report the procedure in error of any sort, including
typographical. It is THAT long established and proved.

Off the wall.....there is classroom theory....and then there
are field applications and principles. In electronics, it
is very often that practical applications deviate from the
theoretical. The one is not any semblance of a pointer to
a deficiency of the other.

The general principle of non-metallic tuning tools is
something we MASTERS teach novices and green weenies so that
they don't make idiotic blunders. OTOH, that axiom is not
at all cosmic or profound. It is only safe. Nothing more.

Sometimes one has to depart from the comfortable realm of
safety. I developed an alternative procedure for adjusting
the Master Reference Oscillator in the PRO-2004/5/6 scanners
because I had seen them drift out of tolerance over the years
and there was no damn sense in the hobbyist having to pay
$35 to $100 to have a 2-minute tweak job done on it by a pro.
Not when the hobbyist is capable of doing it himself with
EQUAL or better accuracy than a pro-shop!!!!

And I also found evidence that hobbyists were using their
frequency counters to set this reference. Alas, hobby counters
are not accurate to any more than maybe 1 in 10E5 or 10E6. My
method makes it *easy* to hit 1 or 2 parts in 10E7, well
within the specs of the reference oscillator.

While it is certainly *easy* to task me with "lack of
knowledge" in many, many areas.....I do profoundly assure you
that this area is not one such.

> Christian

Start off with a copy of the World Radio and TV Handbook and/or
the Passport To Worldband Radio. Then get subscriptions to Monitoring
times and Pop Communications magazine , then join WUN and then
search the WEB for shortwave radio and away you go.

Message-ID: <6ar61a$r7f@bgtnsc02.worldnet.att.net>
Source record: 172097

If you want to improve the 800Mhz reception, I found two antennas that helped thanks to suggestions by others in this news group. The first one was a home built 800Mhz ground plane than I got from R.E. Morin. I've still got the plans if your interested.

The other suggestion was to get an ICOM R-10 antenna. I recently got an R-10 so I swapped antennas to check it out. It definitely improved reception. Not as much as the ground plane but it is also not as bulky. This is the one I use on the road.

Hope this helps.

"D> I remember seeing something in a Ramsey book, I think it`s called FOX
"D> HUNTER, or along that line anyway. If you can`t find it, contact a local
"D> Ham and ask him.

Hams do call Transmitter locating "Fox Hunting". IF one can locate a Ham Club in yuor area try and find out when their next one and go along. You will be able to pick up many hints and tips.
And fro those that don't want to take on a Home Brew Antenna project for Fox Hunting Palomar Engineering of Escondido California builds a nice one with built in "S" meter for use with any VHF/UHF reciever. Any interested can call 760-747-3343 for details.

Bowers Ambulance is licensed to operate on 44.0200, 44.4000 and 44.6200.
For American Medical Response (which I presume is AMR), you might try
47.5000, 47.5400 and H.E.A.R. channels 155.1600, 155.2200 and 155.3400.

Good luck.

Ditto Mr. Cheek,
I use same in vehicle in preference to permanently mounted 18" +/- on car roof. See no overall average difference but sometimes you have to stop and listen on a single frequency. This item gives option to raise or lower, aim right, left, up, etc., and you can usually find a "best spot."
Mr. Cheek, you left out the best part. Don't know if it was a "sale day" but I remember paying about $9 for item. Heck, they wanted about $12 for new "duck."

3326. Help!....Where can I have an aor ar2700 repaired???

Message-ID: <6aroab$i71$1@news.n-link.com>
Source record: 172104
Cross-posted to: alt.radio.scanner,rec.radio.scanner

It works! Even if your chip is epoxied, you can restore the cell freqs!

Look at Figure 4 on this page....

Http://www.n-link.com/~friendly/pro26cell.html

If you trace the legs 12 and 14 to the FIRST soldered points AFTER the chip
you can solder a SHORT jumper to these points on the circuit board and get
all
the freqs (no filters!)

Reception goes from a few images to FULL RECEPTION! I couldn't believe it
myself!
And I have seen no ill effects on the scanner on other bands!

Check it out! It works! I have done it!

Thank you! That is exactly what I needed.

Now a further question, if I may ask....This scanner lists vhf coverage from 147 to 174 mhz; most of the police in my area are on 139 to 144. It has a crystal in it for 139.44, and seems to receive fine--what goes on here? Has there been some type of mod done? Thanks in advance,

Tim

Look, I hate to interupt all the "fun" you seem to be having with some of the other folks, but I have a question. I've been following this newsgroup off and on for about a year, and you seem to shoot straight and have good info.

The Question: I live in Central America, and purchased a Radio Shack Pro-2042. I have never seen it mentioned anywhere on the net. Do I have a dog or is it a model just not sold in the US? Seems to work fine.

Thanks!

I was there last summer with my PRO 26. I found two differant trunking databases on the Spectrum CD Rom, one at 899 Mhz and one at the 938 MHz range. I heard everything on the 938, but of course I did not have a Trunktracker yet as I do now. Also, I picked up some employees talking some juicy stuff on 154.570.

I am interested in getting started in monitoring shortwave radio broadcasts and two-way communications that are on the shortwave bands. I would be interested in listening to military, government, and other two-way communications especially. Any suggestions about the equipment to get, and frequencies to tune for the most activity please let me know.
cnbryant@aol.com or rcca@worldnet.att.net

Thanks in advance,
Christian

There are also unscrupulous companies out there who listen to the
scanners for FIRE calls, and respond to the scene immediately...with
paperwork in hand, bombarding the poor homeowner with offers to handle
all his repair and insurance claim needs.
These are often at inflated fees, and often not completed according to
schedule, or the work is substandard...
I know in Michigan, the Legislators have been looking into this
activity.

Have a look at the excellent site at http://www.qsl.net/n2mca/

It has reviews and comparisons for many different receivers.

Personally I'd go for the 8000, however I'm, tempted to get an R10 myself, as it's a really small compact unit, and does a few things I wish the 8000 would. The big downside is that the scan/search speed seems about the same as a circa 1985 Pro-32a I have around here somewhere! (6/14 channels per second)

I agree it's not as good as a speakerphone, but when your home phone
is tied up while you're surfing the net, it's the only alternative.
Also, since I just moved to a new town and all my friends are 40 miles
away (meaning long-distance on a home phone, but local on a cell) it
comes in real handy for long conversations with friends.

Remove "nospamno" to send email.

This is more along the lines of what I was talking about, I just learned that there is a location out here that dispenses information to board-up companies, Emergency Contractors, ect. 24 Hours a day! Does anyone else out there have knowledge about operations like this in your neck of the woods?
I don't know that I'd call the PRACTICE OF GETTING LEADS this way unscrupulous. Although I can see where abuse of a customer could happen wether it be overcharging or not performing after being hired. But, would you consider the buisness of MONITORING TO SELL LEADS unscrupulous???????????
As a standard disclaimer, I have NO intrest in a buisness of this type, I only stumbled upon it and found it intresting and wonderd out loud if there was any other.

>Anyone know where I can find info on locating the AR8000's discriminator
>tap?

NFM output is from Pin 11 on IC "U1" (TK10489). This is on the underside
of the centre Board, abot 1/3 way down on the left as you look at it so
you will have to take the three rubber knobs off and the locking screws
to remove this board.

Don't forget to add a capacitor (tantalum, around 2uf is fine) in line
with the o/p from pin 11.

Ground can be taken from Pin 19 or any other conveninet point.

Have fun.

Cheers,

Jonathan, doesn't the 8000 have the disc out available on that connector
in the battery case??
If so, then the poster might be better off picking it off there, rather
than taking the 8000 to bits.

Ohhhhhh Noooooo Mr. Bill,

We better watch out, this Maryland precident, will require Congress to ban the manufacture, sale and importation of all devices capable of recording the spoken word!

I use to think all the people who complained about the erosion of our rights were a overly paranoid. However, the Federal and State laws enacted the past several years has convinced me otherwise. The next law enacted will probably requires people to wear ear plugs and "horse blinders" in public, so we cannot overhear other peoples' "personal" conversation nor see them perform illegal actions.

Additionally, maybe it would be advisable not to travel through nor visit the "Peoples Republic of Maryland".

Wes

I've read this thread with a little interest. I'm not intimately
familiar
with the innards of the PRO2006 but I think I can add something here.

The oscillator of which you both speak is probably of the TCXO variety.
That is, Temperature Compensated Crystal Oscillator. Many of them are
made as Cheek describes. Many are not. I don't know if it's prudent to
proclaim that all the TCXOs used in EVERY PRO2004/5/6 are of the same
description. From the equipment I've worked on lately, one group of
models
has TCXOs from at least three different suppliers - they all look very
similar but the internal circuits are different. Some are indeed
adjustable
with metallic tools - although I certainly wouldn't recommend it. You
see,
the trimmer is not a capacitor but a potentiometer dealing with DC bias.
The proximity of the metallic tool can still have a slight affect on the
frequency but once you remove it, it'll settle down at once.

Once more thing. Tuning the TCXO to zero-beat on a "known" accurate
signal
can certainly work. But, there are many mixers in a multi-band radio so
it's no guarantee that every band will be on frequency. In practice,
it's
probably prudent to tune to the highest frequency and "trim" there.

In closing, if your TCXO is off-frequency to begin with, it's just as
likely that your entire scanner could benefit from a re-alignment and
this
is definately beyond the capabilities of most hobbyists.

If only :-)

No such output on the FFC Connector I'm afraid. :-(

You can take it from Pin 5 (from memory) on J7 which is the connector
block for an internal option (DS-8000 or our DX-8000 for example) but
I'd suggest you go to the underside which still means taking the board
out so you might aswell go to the IC.

I beleive there was/is a piccie on the Opto web site (DC-440 page) which
will probably help with visual identification.

Have fun.

Well,I'm using a discone antenna right now,I can easily hear all the action in the Toledo,Ohio area.Even better was my 2Meter Cushcraft Ringo Ranger 2,at 50 ft,fed with 9913,using a Yaesu FT2400 (2meter ham mobile).I could hear detectors way up near Detroit and West almost to Indiana.I'm hoping to repair/replace the ringo soon,I think it's ok,I need to replace the coax,it's full of water,LOTS of water.my main receiver right now is a BC9000,not anywhere close to the yaesu.It was fantastic.BTW,if you put too much signal into your 26,it will make it worse,not better...
Good Luck,
Barry

>Tim

The PRO-16 UHF crystal is the oddball because the PRO-16
uses a 44 MHz first IF on UHF and 10.7 MHz on the other bands:

VHF-low, 30 - 50 MHz: crystal freq (MHz) = Fr + 10.7
VHF-high, 148 - 174 MHz: crystal freq (MHz) = (Fr - 10.7)/3
UHF, 450 - 485 MHz: crystal freq (MHz) = (Fr - 44)/9

For repair data, see Sams Scanner-Monitor Servicing Data
volume SD-7.

Radio Shack has an all-metal telescoping center loaded whip
that is pretty good and still in the portable category.
Other than that, I really don't know that any other antenna
specifically for handhelds is any better than any other.

You can spend a lot of money on handheld scanner antennas
and be no better off that the rubber duckie that came with
it. That RS telescoping whip is pretty good; just not
flexible. I'm not sure it gets any better than that until
you install a base antenna.....and the higher the better.

A discone is probably your best choice there. The Icom
AH-7000A and the Diamond D-130J are the best of the breed
and cost under a hundred bucks.

Using my BC895XLT and my PRO-90 with stock antennas, they both work equally well while trunk tracking. Now both radios are located in my basement and I was wondering if a non stock antenna is worth the money. If so, why?

I do have a question for all the radio experts out there. I have an antenna on the roof and when I connect it to either scanner, the trunk trackers stops scanning my ID lists. It goes back into searching mode and I hear nothing. Would a short somewhere cause this? The vhf & uhf freqs. work fine with this antenna. Also, this antenna has been up for about 10 years.

Thanks,

Mike

I haven't had a chance to check any of these out yet but will on my
April trip. I'd appreciate it if you could share your findings when
you get back. I won't have a lot of time to scan so maybe you could
point out the more active freqs. Also, let us know if they're mostly
active on their trunked lines. Maybe I need to get a new radio!

Anyway, good scanning.

>Wiggie

Howdy,
I also live in a rural area, and a volunteer firefighter. I am the
communications officer for my faire dept. We use a low-band system
yucky with a two-tone plectron alerting format. The main complaint i
have gotten from my fellow firefighters is the cost of a low-band
pager with monitor feature. Right now the best pager for that job is a
Motorola Minitor II. However they cost from $380-$420 new ! So what I
came up with is this......
On the back od Mobile Radio Technoligy magazine, they have and as from
Comm Spec, that sells a two-tone decoder board. Even thought We only
did this once, we took an old el-cheapo scanner and installed this
board into it. When we programmed the tones we wanted into the
decoder, we had it close a relay, and turn on the speaker audio. To

keep the audio amp from blowing up when the speaker wasn't connected, we put a resistor load on it with the DPST relay. It works fine. We had it setup, so the speaker audio would stay on, and you had to hit a reset button, which was a simple momentary button. I didn't actually do the installation of the board, I just kinda gave our tech the idea and I watched over his
shoulder :-)

Hope it helped alittle bit.....
Matt

I may have found a source for several Pro-26's. If anyone is having trouble finding them in the closing days of the Radio Shanty clearance (ends Jan 31) let me know if you would be interested in buying one for say $250. (To cover tax, and my cost of traveling to get them). Just drop me an e-mail if you are interested. I'm not trying to get rich, just help some people out who may want one of these units, but are having trouble finding one before time runs out.

Hi Mike,

I am the maintenance supervisor of the LAPD dispatch center. My crew maintains the "real" MODAT decoders. We built our own hardware decoder, much smaller than the Motorola units which fit in a 19" rack. It is hardware based, however.

I don't know of any program for decoding the tones. What are you trying to decode?? All that is sent is the radio ID and a code to indicate if it is a help request. Nothing all that useful outside of the PD.

Let me know if you have any questions.

Bob

After reading your post, I might believe that you have a dog....a
seeing-eyed dog. I have seen many posts for the Pro-2042 and its very
close predecessor, the Pro-2035. Do a search on dejanews, yahoo,
altavista and you will quickly find many posts and websites concerning
the Pro-2042 and Pro-2035. Yes, it is a very good scanner and is one
of the best when you team it with the OS535 computer interface board
and unleash the power with Probe software.

P.S. didn't mean to 'dog' ya, but you left it wide open.

Wiggie

Depends, as in NJ, a lot of the public service frequencies are "re-used" throughout the state (a lot of them so close together they give each other problems with interference from time to time).

Which township or county are you in? I can look it up that way, and tell you what you're probably listening to. At a glance, I have Jersey City PD listed as using that frequency, but I'm not sure if that's near you.

> Also, the UHF freq in the Holmdel, NJ area on which the space shuttle
> traffic is being rebroadcast? I have 448.5 and 443.4 programmed in but
> have heard nothing.

I also have 443.4 programmed in, and have heard nothing either. You can try these ham repeaters as well, but I can't guarantee anything (I don't listen to them myself):

146.460
146.925
147.045
147.120
448.175
441.950 (<--- doubtful, as it's now a semi-busy SkyWarn repeater)

Hope this helps,

>If so, why?

If you can hear the signal ok without it, then no it will not make any
difference. If your having reception problems then its worth
getting a antenna system that would provide some better gain then the
stock rubber duck type antenna.

>
>I do have a question for all the radio experts out there. I have an
>antenna on the roof and when I connect it to either scanner, the trunk
>trackers stops scanning my ID lists. It goes back into searching mode
>and I hear nothing. Would a short somewhere cause this?

Seems like a loss of signal. You indicated the VHF and UHF are ok.
I would guess you are using an all band type of antenna or at least on
that is not set up for the 800 mhz band. Chances are your
feedline/cable is the wrong type. The higher the frequency the
greater the loss per foot of cable. This could explain why the
lower frequencies are ok and the higher you go the weaker the signal.

Second guess would be that if your signal loss is not a problem then
signal strength is. Could be your receiver is now being
desensitized by other strong signals such as cellular phones etc.
this could cause the trunker tracker in track mode to continue to
search for a data channel. It would not be able to, because of the
interferences. To confirm this, pick a few frequencies on the 800
mhz band, or even the data channel itself. Manually enter it in to
the scanner and plug in the outside antenna. Hear it or hear
something else?

The vhf & uhf

If you have never seen the PRO2042 mentioned anywhere on the net, then it is because you haven't looked. In fact, there was a post today with PRO2042 in the subject line (I know, because I replied to it).

The PRO2042 is easily one of the biggest bangs for the buck that you can buy today: 10 banks x 100 channels, 10 search banks, rotary tuning knob, auto search and store, etc. etc. etc. All you have to do is read the manual that came with the scanner to understand and appreciate what you own.

Don't intend to do the price police thing here, but you might want to know that the PRO2042, which replaced the PRO2035, can be found on a sale at $299 at your local Rat Shack. You are free, of course, to ask whatever you want. Just thought that I'd mention it....

The following gear is in excellent condition - No C.O.D's - some help on shipping - advise zip code in reply.

May swap for radio scanners.

1. Kenwood TS-870S Xcvr - Serial # 70600274 - $1450 - SOLD
2. RS HTX-202 2mtr Hand held w/batt & ant - $90
3. MFJ 20mtr (cw) QRP transceiver - $90.
4. Pyramid Phase III 35 amp (variable) dual mtr Pwr Supply - $100
5. Emco PS-12L (HD) 10 amp Pwr Supply - $25
6. Kenwood PS-52 Pwr Supply - $105
7. Kenwood SP-31 Spkr - $75
8. Icom IC-PS15 Pwr Supply - $100
9. Kenwood SW-2100 (dual mtr) SWR/PWR meter - $100
10. Icom HM-12 hand mike - $20
11. Icom HM-7 hand mike - $30
12. Ham II rotor w/CDE Control Box & 100' hookup wire. - $150
13. Oskerblock SWR-200 SWR/Pwr meter (dual mtr) - $55.
14. Alfa 7705 Capacitance Meter w/case/leads - $50

Inquiries welcomed.

Nice that it's cell modifiable, but it doesn't modify to the 30 kHz increments used in cell. You're stuck with the 12.5 kHz steps. So for cell use, i think it's not good.

The BNC antenna jack is poorly connected, and has a tendency to break the signal (center) conductor connection to the board. But then I've found this problem in other PRO- and BC- models with the same BNC jack. Expect that you will have to either repair that or reinforce it so the jack doesn't twist on the chassis.

For those that want to build your own, the pin out for this cable can be
found at
http://www.qsl.net/ka2pyj/pro64.htm

It is built using a mini-stero phono plug, a 1k resistor an a DB9/25
connector all obtainable at Radio Shack.

good luck.

The Centers have remote sites in the various Sectors. You are closer
to one site than the other. you will hear A/C for far greater
distances than you will the ground stations.

> Anybody know if it's legal to carry scanners on airplanes??

Carry? Yes. Just be sure you have a good set of batteries
in them. If they detect them in their x-ray equipment, you
might be asked to turn them on and if so, they had better
show some sign of power.

SOME carriers let you operate scanners once the plane has
reached cruising altitude. All carriers forbid their usage
while taxiing, take-off, climbing, descending and landing.

Strong signals,

Why didn't you quote the part where I caught you refering to your identity (RCL) in the third person? You don't classify that type of a mistake like a typo or mis-spelling. But don't worry about it John. *I'm* convinced you forged posts in the name of RADIO FAN! and RCL1, among others. I know it, and you know it.

It's understandable; everybody on the newsgroup is attacking you for one reason or another. Creating these identities is the only way you can delude yourself into thinking you'll receive a friendly word now and then. I really don't have quarrel with you John,.....I just happen to find you an interesting study.

sky444@worldnet.att.net says...
> Anybody know if it's legal to carry scanners on airplanes??
>
>
>
Yes, its legal to carry scanners on planes.

As far as use on planes, that varies, not only by carrier, but by the pilot in command. In four trips this year, on three carriers, three pilots on three different carriers have let me use my receiver in flight (United, Delta, US Airways), one did not (US Airways). The key is to simply ask them. I try to approach them while they stand around waiting for the gate agent to let them on to the jetway. In all cases they have been understanding and reasonable about the whole thing, to include the one rejection.

I have to admit though, that I am disappointed with the reception of VHF-Air freqs. I would have thought it would have been better, but when you think about, I guess a plane is a pretty "noisy" environment. Anyone have any suggestions to help eliminate some of the noise?

-K2
Its hard to know when your done if you dont know what your doing...

You can find info out about the OS535 from Optoelectronics at:
http://www.optoelectronics.com/optoscanzone.htm
It will run you about $200 then it will take you some time to install.
Not difficult to install, but just takes some time.

Information about Probe can be found at:
http://home.ptd.net/~pro2006/probe.html

There are other programs that work great with this scanner, I just
happen to like Probe the best since it it tailored exactly for the
OptoScan OS456 and OS535 interface boards. You also can use Scan*Star,
ScanCat, RadioManager, RadioMax, ListeningPost software which all have
nice features.

I think its an excellent radio. its much more
sensitive than my Pro 2004. I can receive a
60-70% quieting signal on the 9000 that dos'nt even break the squelch on
the 2004. I don't have any trouble with intermod or images. I especially
like the alpha display feature. Ive
added the ctcss board. It took care of some
interference i was getting from another PD about 30 miles away. Im happy
with mine.

BTW, I recently made a battery pack for my Uniden Bearcat 235 TTracker. Works fine. The male plug is a panasonic cordless phone battery male plug. Go to your local Batteries Plus-type of store where they sell all types of phone, camcorder, etc., batteries. They will have a recyclable bin for old batteries, mostly for cordless phone batteries. Scrounge. Take your TT or Pro-90 with you to make sure the connectors fit and the store owner most likely will cut off and GIVE you the plugs and whatever wire there is for free.

Also, instead of tape, I used 2 1/4" heat shrink tubing to hold it together.

3462. Re: Please help. I am getting cordless on 147.060 with HTX-202, HTX-242 and etc.

As a matter of fact you can advise her that she is doing so and notify her that she is violating a subpart of Part 15 FCC rules for consumer electronics. (shall not cause interference...)

Harmonics are the fault of the transmitter and if there have been any modifications made to the unit (even a cheapy consumer item) you can cause some problems for the service shop that screwed up her cordless. Please be careful to use diplomacy, these regs have bred some real "Hatfields & McCoys"

After all that, he will have no money left to buy a radio! The best
thing to do, would be to post a question just like the one he did, and
get some advice on "equipment" and "frequencies" from other newsgroup
readers. Buying all the above would come to the same price as an
inexpensive SW receiver. I know, I have all the above (except for WUN)

If you swap out the CPU, you can. www.demon.co.uk/javiation is one source of info to pursue.

Does anyone know if the Opto OS535 interface being sold in Canada and overseas still have cell capability? If yes, that would be another alternative.

WUN is free, take what I suggested in steps. Get WRTH, if you are
still interested move on to the next steps etc. He will get a lot
more good info that way than a lot of bits and pieces from posts.

After you get started and have questions the posts will help. But to
find out basic, need to know info. follow the steps I outlined or
something close to it. Good Luck

3478. Frequncies For Minneapolis, Mn!!

Enough, already!! We get the message. By the way, I looked at your web page and it is sorely lacking many other communities' frequencies, such as the southern Mpls. suburbs (Bloomington, Richfield, Edina, etc.) and anything east of Minneapolis, like St. Paul, Maplewood, Roseville, and others. Don't say they're too far away. I live east of St. Paul and I can receive Golden Valley, St. Louis Park and Plymouth PD's with just the tiny whip that came with the radio. Make your list more useful by including some of these other cities. (By the way, it's "Hennepin", not "Hennipen".)

Opinions expressed herein are my own and may not represent those of my employer.

The VHF TV allocation is not exactly uniform
throughout the world.Which countries do you want?
You could try these....
Primary Sound Carrier...
Ch 2... 69.75MHz or 60.75MHz
Ch 4... 100.75MHz or 180.75MHz

Have a good trip.

Regards... Ken

We've used them for years to pick up signals 20-30 miles away.

The only real complaint I have is that they only last a couple of
years before the wind tears them up down here. (They are mounted about
75 feet up less than a mile from the beach. Both the Scanner Beam and
Scantennas have had to be replaced.)

I bought a dual band PRO-2B new in 1970 or 1971 from Radio Shack
and still have it. It's built by GRE. As with most tuneable
receivers of that era, the selectivity is very broad.

Specifically, what did you want to know?

Works GREAT for what it is, not the real thing but better than not at all. Its in 12.5 or 25 KHz steps, not the wanted 30 KHz.

Hello Jim!
Congrats on passing!! If I had to do it all over again, I would go to the next hamfest and find a clean late model (70's-80's) radio, don't buy if documentation is not available. Reasoning is to get you on the air, get some experience and learn what you would like/dislike in a radio, price should be around 100-150 dollars. Just acquired a older Kenwood, 16 memories, led frequency display, scanning, everything one would need. I have seen too many people get into the hobby, drop big bucks on a radio, the n find out they hate it, and can't get what they want for it, or worse yet, discover ham radio isn't for them. Wish you the best, hope you find what you want.

I have the following items for sale or for trade.
I'm interested in HT equipment, mics, batteries, etc. I'd
perfer to sell for cash. Make me an offer on what I have.

• 99 call Caller ID box. Shows time, date, caller's name,
and caller's number all simultaneously. And, when not in use,
shows current time and date. Comes in origional box and with
batteries.
• Two 14.4 external fax modems. Both are in working
condition and come with the needed powersupply. One is a
USRobotics Courier with manual, and the other is a Motorola
Fastalk without the manual.
• Red security telephones. These are the wall hanging
phones used in airports and larger hotels. they have no means of
dialing out, but are otherwise fully functional. they'd be great
for use in the garage so you don't have to run through the house
to answer a call, or in the kids room. I have two of them.
• Fone Flasher 2. This is RS's origional. Has a strobe
light that flashes when the phone rings, and a built in ringer.
You can have one of the two, or both simultaneously when the
phone rings. Great out in the shack for when you don't want to
be disturbed by additional sounds.
• Composite computer monitor. This is a left over from
the days of the apple IIc computer. It's monochrome green and
has no internal speaker. It would be great for an on-site display
for video work, amateur video applications, and for video editing.
• 12v 2Ah Sealed Lead Battery. GE Part number 1CVA156.
• Helium neon laser tube and power supply. 1 milliwatt
output. mostly a fun little toy, great for parties.
• Compaq 286/LTE laptop. Backlight display, 1.44meg
floppy drive, internal 2400 modem, modified to run off of ni-cad
C batteries instead of proprietary battery pack, and fully MS-DOS
6.22 compatible. Batteries not included.
• 82mb 3.5" IDE Hard Drives. Tested and none have bad
spots. I have two Maxtor, and one Western Digital.
• 125mb 3.5" IDE Maxtor Hard Drive. Tested and has no bad
spots. These hard drives would be great for adding space to an
existing system, or keeping the kids' homework and games on a
separate drive.
• As a side-note, yes, everything works.

Wondering about MDT's on the 400 MHz band.
These have been around for awhile?
Who makes them...Motorola?
Are they anything like a RAM or Ardis systems?
Are they monitored by any type of software?
Haven't heard much mention of them.

Thanks

View this directly at Ebay:
http://komodo.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=5042515

Description:
This 200 channel scanner with matching $30 leather case could pass for new! Tune in on all the action from 25 MHz thru 1.3 GHz (less cellular). The mode selection (AM, FM, FM-WIDE) enables you to listen to everything from low band VHF, television audio, broadcast FM, military and civil aviation, UHF, and 800 MHz. The attenuator can be selected by channel, which is helpful in preventing overload in strong signal areas. Auto search-and-store mode allows to you search a frequency range and automatically store active channels. One-touch weather button for instant access to local weather. The scanner comes with optional leather case, antenna, user's manual and belt clip. This was last year's top-of-the-line handheld scanner from Radio Shack and sold new for $459.95. Be the high bidder and tune in on all the action today!

Buyer agrees to pay by cashier's check or money order and $5.00 UPS shipping.

Radio ships within 24 hours of receipt of payment. For features and specifications:

I would think the aircraft windows would allow much of all signals
above high band vhf.I have monitor and conversed with many pilots who
where using using an ht and the standard ducky on 146.52. Mostly pilots
of ptivate or military air craft. You may or may not hear much with the
scanner giving much of the above reasons. I have always felt most of
the fun was in trying to discover what you can monitor.

Uniden Bearcat 200xlt handheld scanner. Covers the 800Mhz band including cell mod (not done by me). Date code is OEIO. Scanner comes complete with AC charger, battery, rubber duck antenna, and a Metro West belt clip attached. The added belt clip makes it much easier to carry the scanner w/ you and will not break or come loose like most plastic belt clips. Scanner is in excellent condition. I will be happy to provide any frequencies needed for the buyer, I have a 1997 edition of the Percon frequency directory.

Price is $175 OBO

>Anybody know if it's legal to carry scanners on airplanes??

Carry...yes

Use, that is restricted. They will tell you to "turn off all electronic devices during takeoff, and landing". The are worried about possibe interference with critical navigation equipment during those phases of flight. But the rest of the time, go for it. But I find that you won't hear much. Think about it, you are riding in a giant metal tube!

Anyone have any real world stories to share on this topic. What airlines typically do or do not allow their use. How about USAir? I got a flight coming up soon. Wouldn't that be fun. Or maybe I don't want to know what's going on! ;-)

3522. Pro-90 TrunkTracker squelch behaviour question

Newsgroup: rec.radio.scanner
Date: 1998-01-31 00:00:00 UTC
From: bcostin@NOSPAMix.netcom.com
Message-ID: <6au9h5$l7n@dfw-ixnews5.ix.netcom.com>
Source record: 171892

I've noticed something with my new Pro-90 that I'm not sure how to interpret. Everything ordinarily seems to work just fine, exactly as I'd expect from the manual, and from my experience with other scanners. However, when doing standard, non-trunking scanning, it seems that sometimes the squelch control knob stops being effective.

For example, if I have the squelch set wide open when I start scanning and then tighten it up, it sometimes appears that the scanner just ignores me, apparently scanning right past a frequency I know to be active. If I hit the Manual button and then start scanning again, the squelch level seems to be appropriate.

This happens infrequently and elusively enough that it could very well be my own fevered imagaination (heck, I'm still remiding myself that the squelch knob operates in the opposite direction from my Pro-60.) But I'm curious if anyone else out there has seen anything similar with the RS or Uniden versions of this radio.

Thanks!
-Bryan

If you can find a radio club in your town, someone can show you
how to make a vertical dipole or a ground plane antenna for less
than $5.00 that will perform better than a rubber duck or a
horizantal yagi (TV antenna) for your purpose.

As a last resort try Radio Shack. Sometimes radio hobbyists
work there.

> Yea, & you had to use lies to do it.

Nooooo, sphincterlips, there was no need or desire to
not tell the truth. As Moderator of that forum, it was
MINE and mine alone....to do with as I pleased. I did.

Apparently you STILL don't understand FidoNet. Forums
there are NOT public property. They literally belong to
the Moderator and he can do with it as he sees fit.
After you insisted on pushing your luck and testing me

to see if I would and could boot your wretched ass off
.....I did. It was easy. Piece of cake. And a lot
of people thanked me for it.

Simple.

You were a flaming asswipe there just as you are here.
If it were possible to boot your sorry ass off here,
it would have been done a long time ago....and not just
by me. Everyone except your sister, Petie Joe Boe, would
have given you a crosswise shoe print on your sorry ass.

Yes, it is.....

> Many of them are made as Cheek describes. Many are not. I don't
> know if it's prudent to proclaim that all the TCXOs used in EVERY
> PRO2004/5/6 are of the same description.

They are the same......different lot numbers from model
to model, but consistent within a model line. Yet all
are the same design and innards.

> Some are indeed adjustable with metallic tools - although I
> certainly wouldn't recommend it.

Normally not, no. In this case, it doesn't matter.
And, in fact, it would be tough to come up with the
precisely correct tuning wand in the first place.
I'm not sure there is one..... and the hobbyist
sure won't have one, and the proshop isn't likely
to, either.

> You see, the trimmer is not a capacitor but a potentiometer
> dealing with DC bias.

This one is a capacitor. And with a frequency counter
on the output of a buffer amplifier, you stick the
screwdriver in the hole until it contacts the capacitor,
and the freq doesn't shift so much as a single digit.
Not that it matters when you heterodyne it to an
incoming WWV signal on 10 MHz.

> The proximity of the metallic tool can still have a
> slight affect on the frequency

In this case, it doesn't, though.

> but once you remove it, it'll settle down at once.

Settling is lightning quick to be sure. A touchup
might be okay after a few minutes, but that's rare.

> Once more thing. Tuning the TCXO to zero-beat on a "known" accurate
> signal can certainly work.

Sure can. Same thing as a lissajous on a scope.

> But, there are many mixers in a multi-band radio so
> it's no guarantee that every band will be on frequency.

No, but the X-301 is a master reference for the PLL,
sooooooo......???? The only L.O. that's not controlled
by the PLL is the 3rd one at 48 MHz. But it's okay.

> In practice, it's probably prudent to tune to the
> highest frequency and "trim" there.

Well, you have to have a known reference, and since the
TCXO is 10 MHz, and WWV is 10 MHz,....chaaaa--chingggg!

> In closing, if your TCXO is off-frequency to begin with, it's just as
> likely that your entire scanner could benefit from a re-alignment

Six of one; half dozen of the other. Very true in PRO-2004's
which are very likely to drift out of alignment with aging.
Not so true of the PRO-2005/6 and 2035/2042..... these
seem to hold like rocks. But the TCXO's can sometimes still
benefit from a touchup. Depends on the accuracy of the counter
that originally checked it.....

> and this is definately beyond the capabilities of most hobbyists.

I don't think so. Tune to a NOAA weather broadcast and it's
plenty good for tweaking IF cans and discriminator coils.

Piece of cake.

The thing is.....Mackey is on a slam trip and is farting and
spitting in the dark at anything which seems to defy the rules
of thumb in the Radio Amateur's Handbook.

He doesn't understand that the rules can easily be broken by
those who make the rules or otherwise KNOW when they don't
apply. But he's on a bash trip; nothing more. The idiot never
contributes to anything on this newsgroup other than shit.

Prima facie.

It is perfectly legal to carry them on aircraft, but I doubt that is
the question you meant to ask. In general, it is not permitted to
operate them on the aircraft. The precise rules from airline to
airline, but it falls within the general prohibition on the use of
radio equipment on board the aircraft.

> The Question: I live in Central America, and purchased a Radio Shack
> Pro-2042. I have never seen it mentioned anywhere on the net. Do I have a
> dog or is it a model just not sold in the US? Seems to work fine.

The PRO-2042 is (arguably) the best scanner in current
production anywhere. It is a carbon copy clone of the
earlier PRO-2035 with a bit more fancy firmware in the
CPU. Electronically, it's a clone of the 2035.

Now these two are evolutionary advanced clones of the
earlier PRO-2004, PRO-2005, and PRO-2006. Electronically,
all five are very, very closely related. The PRO-2006
was the most successful of the bunch and remains "the best"
thanks to it's cellular capability and to easier operations
from the front panel. It's also a bit more hackable and
has a better receiver section.

Each of the five has its strong points, though, and
there's no arguing that any of the five are primo #1
class acts.

I think you hear less of the PRO-2042 because Radio
Schloque priced it out of sight for the first 18-mos
of it's store life. Plus the fact that it can't do
cellular. And it has one nasty front panel that is
the utter pits to operate. It's just not an "exciting
radio" even though it really is about the best that money

can buy in the scanner class.

If you are interested in modifications and such, most
everything ever written up for the PRO-2004/5/6 series
can be applied to the PRO-2035 and PRO-2042. Not
cellular, of course, but many other things are possible.

<Gack!> According to that Web site:

+> 7. Turn on unit. Everything works great, right? Now set to
+> autoscan, with 360.2375 as lower limit, and 385.1625 as
+> upper limit. Press SHIFT and change mode to NFM, then change
+> step rate to 5.

Ummmmm, THAT is not called a "cellular restoration". It is
called the "Virtual Downconversion" mod, and with the initials,
"VD", it is almost as bad as a venereal disease.

Not only is the displayed freq totally out of kilter, but
to search the cellular bands in 5 kHz steps is like
tip-toeing from here to Timbuktu.

That makes more sense, it just sounded kind of funny the first time I
read it, it almost seemed like he should buy all that stuff at once and
have no money for the radio! WRTH seems like it is not of much use
though without having a radio allready, Passport might be a better first
choice, as it has some reviews on radios and some other info that could
help in deciding what to buy.

3543. Aircraft Transponders

Newsgroup: rec.radio.scanner
Date: 1998-01-31 00:00:00 UTC
From: dcross@brionne.cyberverse.com
Message-ID: <886234302.621335@rodelo.cyberverse.com>
Source record: 171913

Does anyone have a reference to the frequency, modulation type, and format of conventional commercial aircraft transponders? Apparently, the FAA has recently changed the flight paths so that my neighborhood is getting buzzed by large passenger aircraft; unfortunately, it is impossible to get a tail number off of most of these flights since they are just above the afternoon marine layer. There is talk of some kind of legal action to stop the overflights, but of course this requires evidence of specific incidents; in the absence of visual indications of the specific flights, it seems that reading the transponder data is about the only way to come up with the required documentation.

Thanks in advance.

It appears that the SA Police Services in the Western Cape have changed over to new frequencies within the last two weeks or so. New Motorola radios have been issued for use.

Does anyone know if this is the start of the Motorola trunked network that was rumoured a while back and if so, what would the new (shared) frequencies be?

How come every time my ship comes in, I'm at the airport?

It is perfectly legal to take your scanner onboard a commercial airliner, and most airlines will allow you to use it during cruising flight. Rather than subject yourself to the whims of the flight crew - who may or may not know their own company's rules - check the back of the inflight magazine where it lists the do's and don'ts of traveling on that airline. They usually mention scanners there along with other electrical equipment, and spell out exactly what you can and cannot do.

Of course, rules aside, if one of the crew asks you to turn the radio off, DO IT. Interfering with a flight crew is a federal offense, and one that is taken very seriously. The one time a flight attendent told me I could not use my scanner I immediately turned it off without arguing, but I also asked to speak to the head flight attendent on board. When the supervisor on the plane asked what the trouble was I showed her company rule in the magazine, and politely asked her to check with the pilot. A couple minutes later she came back and said the pilot said it was OK to use the radio, and he had even passed along the ARTCC freq. they were working at the moment.

>Hartford on say, 132.6 MHz and 125.32 and 124.85 I can only hear the
>aircraft side. Can anyone explain this?

This is a question that often crops upover here with us also...

It is perhaps best to say there are two distinct types of airband
transmissions. Those relating to comminications at airports and those
for en-route traffic.

The transmissions from airports are primaraly concerened with
communicating with aircraft in the immediate vicinity of the airport,
in the case of "Ground" frequencies within the airfield
boundary - hopefully the guy in the Tower on the Ground frequencys isn't
going to want to talk to aircraft outside the boundary fence :-(In a
similar fassion frequencies allocated for "Tower" use are generally only
used for communicating with aircraft on final approach and departure.
Neither of these frequencies really has to be very "powerful" so you
generally have to be in close proximity to the airfield to receive them
as neither "travel very far".

An approach or departure frequency often has a greater output as it is
used for communicating with aircraft maybe some considerable distance
away. As a result if you live some miles away from a major airport you
might get the approach controllers but not the Tower or Ground.

Moving onto to En-Route centres could be called a different kettle of
fish. En route centres are responsible for airways traffic in/out and
through their boundaries. To gain complete coverage of their sector
there will probably be several remote transmission sites dotted around.
You maybe several hundred miles from the actual control centre but quite
close relativly to a transmission site.

Here in the UK the London Air Traffic Control Centre is responsible for
all airways traffic from the French FIR boundary to the Scottish FIR
boundary. One of the nearest transmisson sites for to me is close to
Humberside Airport some 50 or miles or so away. I can hear the "London
Controllers" for the airways around us from home from this site although
physically they are sat at West Drayton some 200 miles away. I cannot

however receive the ground transmission from Humberside Airport as there responsibility is just in/around the local area.

One other major factor as to whether you can hear the ground controller is the geography of the land between you and the transmisson site. VHF/UHF signals are considered "line of sight" so if there is a hill between you and the airport/transmission site you are worse off than somebody the other side or on top. You will also find that the weather conditions can improve receiption. During conditions when there is a "lift" on you can quite often here ground transmissions from consderably further away.

Hope this helps a little.

Have fun.

Cheers,

Get the flight scheduals. if it says flight 69 is due at 0300 hrs and
you and a lawyer and a couple of witnesses video/audio tape what happens
at that time then you don't need tail #s. If you try to do the
transponder trick you will die of old age and broke before you could
put together a system that would pinpoint the offending air craft.
If they have changed glide paths then not all air craft will be on the
scheduals cargo planes and privates will also use the new route.

Ah, another example of why you're a poster child for Attention Deficit Disorder. You can't even remember that my call is now N7NT. You mustn't mix methadone and prozac, Toilet Boy, it's bad for the few remaining brain cells you have.

As for experience, your "experience" shows when you tell people that putting 75 ohm coax on a 50 ohm port results in a 2:1 SWR. You really are lame smegma breath.

If you had any intellect or creativity, you'd show it. You have none, so
you can't show it. Now, on the other hand, my charming little satire
"All
Hail King Mackey the Liar", the quaintly witty "Top Ten Reasons Why John
Mackey is the Most Loved Person On the Internet" and the black humored
"John Mackey's Obituary" are excellent examples of my creativity.
Jealousy
becomes you, Toilet Boy ;-).

John Mackey, racked with limited intellect and no technical ability, is
all mouth. You once claimed that you were a superior hacker and you'd
wreck havoc on anyone who opposed you. Your threats ring as hollow as
the
epithet's of Ozymandias. If you really had the education you claim
(which
we all know you've lied about), you'd know the reference.

This is a wrong (as usual) answer, at least in the US. ECPA is a "strict liability" kind of prohibition. There is NO provision for any sort of exception based on whether or not you are monitoring your own calls or anyone else's. It is simply illegal to monitor those frequencies - UNLESS you are identifying a source of interference to another licensed radio service.

Yes, it is, IF the airline COMPANY says it's OK. (On private planes, it's legal if the pilot will allow it, but he is responsible for ensuring that the radio will not cause harmful interference to any systems on his plane.)

All the other crap people will write about their own experiences, or about the pilot-in-command having the authority to permit it on airline flights, is WRONG. The regulations are very specific. For details, go the www.ggw.org/nf2g and follow the menu links to "USA Nationwide", then "Laws & Regs".

Even if you could read the transponder data, it won't help you. All you'd get is the "beacon code" (slang term: "squawk") which is a 4 digit code that's temporarily assigned. You'd need data stored in the air traffic control system to corellate that with the filght. You'd also need FAA radar data to match time and position, since several aircraft can be using the same beacon code in the same locale.

If you live someplace where aircraft noise is a problem, you're near a major airport. Most major airports have noise control offices whose job is to help people like you. Try calling them.

Glenn or Greg...busy morning...had to get out fast
and lost the thread

I was paying the guy a compliment for all the fine
word=usage he has shown us. He's a monumentality
all his own and was just giving hurrahs for him to
relish. Or embellish.

I just thought that seeing as how he's so gifted with
these word 'stutterings" he imposes upon the NG
that maybe he is going to be making a book out of
them and then having to pay us to read it.

I was just giving credit to the guy.

He's an inspiration to us all. Coughing and spitting
come to mind.

if you cannot say nice things about people, forget
JM.

and i pointed to the fact that THE CHEEK GUY is his
light

source.

I forgive JM for being who he is. And wanted to think
he can rise above all this and do a creative thing with
all the fine words he's muttered in this NG.

so what is so wrong with that?

ps: you really don't believe me, do you?
well, you were not supposed to.

COuld you point out some of the other disadvanteges

to this mod for the 26 vs. having a pro 43 fully restored?

I may want to get a 43.

Actually with hyperscan (300 steps/sec) the 5 khz steps of the 26

seem to fly by quickly.

I have noticed the speaker audio of the 26 is very mellow, bassy and almost hard to understand vs. the crisper treble sound of the pro 62. (is this similar to the 43?)

With headphones on, different story. The 26 sounds more lifelike, less hiss, and data tones

are much less annoying. ANy other comparisons?

please respond in the group

Sorry to tell you...but it WERKS!
VD...whatever you call it...it works!
5Khz steps cause that is how the scanner works...in priority mode I have
NO TROUBLE receiving the calls.

I am NOT sorry that I didnt waste $20 on a book to tell me how to do it...
and it was EASIEST MOD that I could find that the unskilled (NOTICE I SAID
UNSKILLED) person could do...unlike some BOOKS that require extensive
electronics knowledge...Hmmm....wonder who sells those kinda Books? Is it...
BILL CHEEK? (Church Lady From Staurday Night Live Impression!)

I have gotten over 21 emails thanking me for posting this mod....information
that they have
NOT been able to get elsewhere....without wasting money on a book for $20 to
get just
one mod.....I personally feel more than $5 for mod instructions is insane.
But then again,
I do not count on others ignorance to make my living....
I am not into this to make money OR SELL BOOKS/MAGAZINES....I believe
information should be free.

I rest my case >:)

American allowed me to use mine recently but consider the following:
(a) the noise on a jet
(b) that your are enclosed in a shielded tube i.e. the fuselage which
rather effectively blocks radio waves;

(c) the harmonics put off by the planes electronics.

SUMMARY: Not much to hear.

Actually, the RS Discone (if still available) is quite a good antenna.
However, there will be no gain, as the design does not call for it.

Also, I would think an all band TV antenna, mounted vertically, would
make a nice directional scanning antenna. I remember listening to cell
phones (before it was illegal, and I was too young to know it was evil)
on an old TV (it had the old ch. 83 VHF tuner), and being able to almost
track the call. Ah, the good old days....

C> Think about it...there's a glass window right beside you. Get the scanner
C> close to the window and you will hear signals for several hundreds of miles
C> when you're airborne.

But CB Brain you are moving over the ground fast enough and High enough that
there are conflicting signals. I would expect the Reception to be VERY poor.
Plus becasue of the Small Antenna port presented by the window quite
directional. Overall it dosen't sound like a Smart Idea. Even if the Airline
Allows it.

Source record: 171974

ALLSAFE'S
WACKY MACKEY ACTIVITY REPORT 2/1/98

You may already to know the amusement of flipping through the simple (and sometimes riske') quotes and one liners bearing Mackey's name on countless USENET posts.. But did you know that there is quite possibly another group of Mackey messages you may be missing?

It is the opinion of this report's author that the following USENET authors are actually posts of John Mackey! John's writing style comprised of distinctive tones, syntax, and original use of punctuation and spelling bear remarkable resemblences to posts by the below authors. I cannot ascertain conclusively who authored these posts. I'm merely stating that USENET posts, bearing the below listed names, share remarkable simularities to the writing style in posts by John Mackey:

RADIO FAN!
rcl1
compania

Since it is only an opinion, it is possible that some behaviorly deficient individual's post could be listed among these alleged John Mackey forged posts. If that happens; I apologize, either to the poster or John Mackey; depending on which one was insulted.

> same troubles again.
>

Nope...John, you missed it. I post under Allsafe@netwit.com. That's my handle. Bill writes with a distinctive style, I write with another distinctive style. I'm not attacking anyone's technical prowess. I love scanners and radio's, I love performing mods and am pretty good at following directions and handling a soldering iron; that doesn't mean I have any idea *what* I'm soldering. No matter. I enjoy scanning; but I'm a terminal newbie. I make my living writing. That's my forte'.

But you interest me John. Your prolific and poorly composed posts keep coming even though all responses seem to indicate that you're held in extremely low regard by all participants. But what really interests me is your forged posts under assumed names that purport to support you. I just can't figure out if you do it because you want to impress the NG, or whether you do it for justification to keep on posting, even though all the *real* NG members think you're behaviorly deficient.

Be that as it may; I decided to contribute a regular new feature to this newsgroup. It's called "Allsafe's Wacky Mackey Activity Report". I was working on it last night. Check it out!

D.B.,
About the best things you can do , is to raise the ant. as high as you
can. In a two story (or higher) building, put it on the highest floor
you can. If not, buy a mobile cell phone ant. and put it as high as
possible & hook up an adaptor to the phone base antenna. That`s as good as
I can say without getting into some serious $. Hope this helps.
Good Luck & Happy Scanning,
Charlie

3610. Scanner Mod

Newsgroup: rec.radio.scanner
Date: 1998-01-31 00:00:00 UTC
From: ak383@hwcn.org
Message-ID: <886137678.849412103@dejanews.com>
Source record: 171980

Is there any small hand held scanners that have an ear jack that can be modified to receive 183.00 mhz and 176.xxxx mhz. The reason I need these freq. is that I have two wireless Microphones and want to have a portable receiver that I can mount on my Camera for video work. The receivers that come with the mics are to big for camera work.

Thanks

Dan Copeland

Close to shore operations should be standard marine VHF channels
while out to sea, short wave USB/LSB would be normal. along with
sat communications.

J>normally lasts in these batteries from someone who has either tested
J>them or owns their own...Thanks for any information on this subject.

I don't think there is any advantage to buying the RELM batteries. I have used two different sets of batteries and found that the scanner works fine with either set. The first set consisted of the RS high capacity NiCad, which worked fine. Then at a flea market this past fall I found a set of NiMh batteries made by Duracell. They were in a battery pack made for some sort of GPS system. The packs were new, unused and in the boxes. Since the pack cost only $5.00, I thought I would give it a try. These worked fine and charged up nicely with the RELM supplied charger.

The bottom line is, any set of rechargable AA batteries should work fine.

Gary

The call is not new and I have used it in this forum for the last
year or so. As I said before, you are a poster child for Attention
Deficit Disorder and can't remember squat.

You, call *me* on the carpet? Ha! The best you can do is get rug burns
on your hands and knees from Brian Reed pumping you silly let alone
call someone else on the carpet. More delusions caused by your
mixing methadone and prozac.

Listen to the voices in your head, Toilet Boy, jump off the bridge.

You just waste people's time posting inane and profane rantings laced
with the limited stupidity of such a small mind. Besides, if you didn't
like my stories so much, why do you respond to them and why did you even
ask for permission to reprint them in that rag from the Phony Amateur
Radio Goon-Balls? I know, you're jealous because you have no mind let
alone creativity and can't create such charming stories. Just like
you have no technical talent and can't give accurate technical advice
on scanners.

Yo Toilet Boy, how come you left out the part about your supposed advanced education? Perhaps because you don't have one? Ah, it's because you know you can't field the reference. You fail yet another challenge to your fictitious education, Toilet Boy!

Since you have such a limited memory due to excessive prozac abuse, here is the quote for you:

> John Mackey, racked with limited intellect and no technical ability,
> is all mouth. You once claimed that you were a superior hacker and
> you'd wreck havoc on anyone who opposed you. Your threats ring as

ALLSAFE'S
WACKY MACKEY ACTIVITY REPORT 02/01/98

You may already to know the amusement of flipping through the simple (and sometimes riske') quotes and one liners bearing Mackey's name on countless USENET posts.. But did you know that there is quite possibly another group of Mackey messages you may be missing?

It is the opinion of this report's author that the following USENET authors are actually posts of John Mackey! John's writing style comprised of distinctive tones, syntax, and original use of punctuation and spelling bear remarkable resemblences to posts by the below authors. I cannot ascertain conclusively who authored these posts. I'm merely stating that USENET posts, bearing the below listed names, share remarkable simularities to the writing style in posts by John Mackey:

RADIO FAN!
rcl1
compania

Since it is only an opinion, it is possible that some behaviorly deficient individual's post could be listed among these alleged John Mackey posts. If that happens; I apologize, either to the poster or John Mackey; depending on which one was insulted.

AH but everyone I have looked at RADIO SHACK BEARCAT ETC ALL STOP
AT 174.00 MHZ then scip tp approx 400 mhz

I have a uniden bearcat that is ideal execpt it does not do 176.
186.00 mhz

ALLSAFE'S
WACKY MACKEY ACTIVITY REPORT

You may already to know the amusement of flipping through the simple (and sometimes riske') quotes and one liners bearing Mackey's name on countless USENET posts.. But did you know that there is quite possibly another group of Mackey messages you may be missing?

It is the opinion of this report's author that the following USENET authors are actually posts of John Mackey! John's writing style comprised of distinctive tones, syntax, and original use of punctuation and spelling bear remarkable resemblences to posts by the below authors. I cannot ascertain conclusively who authored these posts. I'm merely stating that USENET posts, bearing the below listed names, share remarkable simularities to the writing style in posts by John Mackey:

RADIO FAN!
rcl1
compania

Since it is only an opinion, it is possible that some behaviorly deficient individual's post could be listed among these alleged John Mackey posts. If that happens; I apologize, either to the poster or John Mackey; depending on which one was insulted.

BE SURE to ask the airline or pilot (if on a private flight) if you may
use your scanner. Some airlines have strict rules governing the use of
radio receiving sets (walkman style radios, scanners, etc.).

>
> Thanks in advance.

I'm curious; legal action for what? The noise? I'm afraid the noise
is not illegal. You plan on reporting a plane that is not breaking the
law. As soon as a plane leaves the ground local and state laws
regarding noise lose jurisdiction. Altitude violations are another
story. The FAA sets specific altitude limitations regarding overflights
in populated and rural areas, however these generally don't apply to
aircraft landing or taking off from an airport.
Life's full of little nuisances. We all want prisons but "not in my
area", we all want land fills but "not in my backyard", we all want
convienent transportation, timely products and service but "don't build
that noisy airport near me". Sometimes that's "life in the 20th
century".

(this should stir some debate and hate mail huh?)

> paragraphs (b)5 and (c) give the operator (airline) and/or pilot in
> command the final authority as to "any other portable electronic
> device that the operator of the aircraft has determined will not cause
> interference with the navigation or communication system of the
> aircraft on which it is to be used."

Point #1

FAR 91.21 (a) states that no person may operate any portable
electronic device while onboard. That covers pretty much
everything and INCLUDES scanners. Paragraph (b) goes on to
list exemptions from paragraph (a) as well as stating that
the operator(if commercial) or pilot(if private) may allow
other devices if they deem it will not cause interference.
Scanners fall under this "other devices" ruling so it is
up to the operator(since we are talking about commercial
planes here) to allow or disallow them.

Point #2

I believe what Mr. Stark was trying to say, in a not so
diplomatic way, was that on commercial airlines, the
operator will have laid down the rules as to what can
and can not be operated. If they say "YES" or have not
passed ruling, the pilot can say "YES" or "NO". If the
operator has said "NO", the pilot will most likely
say "NO" too since he/she is bound to follow the operator's
guidelines(if he/she wishes to remain employed).

Point #3

FAR 91.3(a) makes it plainly clear who calls the shots
aboard ANY aircraft. It is NOT the operator, it is NOT
the flight attendant...we are not talking about who you,
as a passenger have to listen to(which is any member of
the flightcrew according to FAA regs)...we are talking
about who has the final authority while onboad the
aircraft. There is no discussion, there is no doubt,
PERIOD.

FAR 91.3(a) The pilot in command of an aircraft is directly
responsible for, and is the final authority as
to, the operation of that aircraft.

Folks:

I'm thinking about getting a Trunk Tracker scanner radio. As I understand it, different areas use different trunking technologies. I want to get a radio that can receive the trunking technologies used in the Denver, CO area. Actually I'm a little bit south of Denver (Littleton).

Which trunking technologies are used in my area? Which radios can handle the trunking technologies?

Sincerely,

Eric Bergman-Terrell

I used to work on the transponders on the E-3 AWACS. The transponder receives interrogations at 1090 MHZ and transmits replys at 1030 MHZ. It may be vice versa, but I seem to recall it being that way. There are 4 types of interrogations:
Mode 1
Mode 2
Mode 3/C
Mode 4 or IFF (military only)

Transponders use pulse modulation. The differences between interrogations are the pulse spacings. All replys except IFF consists of a type of BCD encoded pulses. IFF is classified as SECRET

3672. New Costa Co. Fire Freqs - VHF-Hi

Newsgroup: rec.radio.scanner
Date: 1998-02-01 00:00:00 UTC
From: "Dr. Radio" <drradio@NOSPAMhotmail.com>
Message-ID: <6b2g1q$f94$1@nnrp2.crl.com>
Source record: 171808

Contra Costa County Fire (San Francisco Bay Area) has finally begun to phase-out their VHF lowband radio systems. This is good news for those who don't like long antennas or electrical noise...

They are now simulcasting on the following VHF frequencies as of January 98:

Central County Fire - 160.110@156.7 Hz

West County Fire - 159.735@156.7 Hz

East County Fire - 159.615@156.7 Hz

Only the dispatch traffic is being broadcast now. Thus, you will not here the mobiles since they are still on lowband. To hear the mobiles from any of the lowband channels, listen to 33.48 MHz @ 127.3 Hz.

Unfortunately, the plan may be to operate these new VHF channels on a simplex basis - no repeater.

Also, the new VHF channels appear to be lower-level or weaker than the lowband channels they replace. Anyone know where the base stations are located?

The Doctor

Any suggestions for making, buying or modifying any kind of device that can filter out non-voice signals. I would like to squash digital encrypted and mdt signals that the EDACS system in my city transmits. I have asked before, but no one had any solutions that I haven't tried (G/wiz and Channel lockouts...) I really need to figure out how to build a filter that will keep 1) the squelch from opening or 2) build an auxillary speaker that has an audio filter that kills non-voice noise. Thanks in advance

>THANK YOU

Actually, it's the Pro-90 model from RS, I don't think there is a Pro-91 (yet). The big difference seems to be the extra stuff that Uniden bundles with their scanner: an extra battery pack and a charging cradle. RS includes a wall-wart AC adapter, but no extra battery pack. The BC235 is generally considered the be the better deal, though your mileage may vary.

In looking at the photos of the Bearcat (I have a Pro-90) it appears that the sculpting of the scanner face and some details of the buttons are a bit different between the two models. (The Pro-90's mix of square and round buttons looks a bit easier to use by feel to me.) Both scanners are made by Uniden, so minor differences in physical appearance aside, I think that the scanners are electronically identical.

I was wondering if anyone had any stories of taking scanners into foriegn countries. I took mine to the Cayman Islands and got the 3rd by custom officials at Grand Cayman airport. They wanted to know the range of the scanner and if I planned on listenning to official goverment transmissions or what. I told them I wanted to hear dive and fishing boat activities and they weren't real cordial about it, making me leave my passport at the airport and telling me I had to show the scanner and the fact that it was leaving with me back to the states to get my passport and the ability to get out in the first place.

3688. FS: or trade TH22 knwd ht (2meters)

I have a Kenwood TH22a 2 meter ht for sale or trade.
About two years old in near new condition. Rarely used. I recently aquired
a dual band HT and find the TH22 to be truly excess equipment.
Comes with the box, book, flexible antenna as well as a wall cube
charger provided by kenwood.
Radio features 40 memroies and VHF high band extended receive.
Lockouts for channels are available too. No mods have been done to this
making it a radio that has not had unwanted fingers in it.
Scans as well. Auto shut off and battery saver a couple of the
features on the radio. Backlit green lcd display. Dispaly can be left on
if you desire too.

$150 plus ups shipping from Racine, WI

Whatch got to trade?????

Would consider trade for Radio shack 2004/5 scanner with a few extra bux
from my end.

or purhaps a 15" or 17" flat screen svga .26 or .28 dot pitch monitor.

if this interests you please contact me via phone or e-mail

Thanks for your time and attention.

From: madscanner@hotmail.com
Message-ID: <34D52CFC.2949@hotmail.com>
Source record: 171826
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Is anyone having problems accessing certain portions of the FCC's new beta test frequency search engine? For example, go to:

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

and:

Select - "County/State"
Select - "CA", "LOS ANGELES", "All", "25" and click [OK]
Select - Click "WTB LAND MOBILE DATABASE"

After the third step, my browser (Netscape) will halt at "Transmitting data from server." For hours it just sits there! Arrgh! You can alter the search in any way you like; any county, any state, any service, any amount of results. Other functions on the other hand (such as doing a search by Callsign) work just fine.

I've verified this problem to be present when going through three ISPs; mindspring.com, mci.com, idt.net, so I'm positive that it isn't related to my own system or provider.

Could some of you check this out and report back on what you find? Also it might not hurt if the problems/suggestions e-mail address shown on these pages were let know about it. I have, but it might take more people complaining before they look into it. :-)

> thanks Ed

Most modern ni-cads will accept charges after each use without adverse
effects, such as "memory". Each use meaning not totally draining the
pack. However, it would be a good idea to develop good charge habits
just in case. Try to take the pack as low as possible without totally
killing it. If you do this on a continuous basis, you may cause
individual cells to reverse polairty....not good. If you do recharge
after each use, and the battery is not fully drained (1.1 volt per cell)
you should drain the battery on occasion and give it a full and
sustained charge, to top it off. The instructions of the TT do indicate
the batteries can remain on charge and not cause harm.

Here's the question -- does the pro-90 take regular batteries or
only a nicad like the BC? If they are basically similar and one will
take real batteries, I'll _always_ buy the one with real batteries.
You can always use rechargeables if you like.

Nicad battery packs SUKK.

;)

Hmmmmm.....we're not talking about powering a pace maker or something
that is subjected to regular abuse right? I guess it depends on how one
uses their scanner. Perhaps the cold solder wouldn't be so good for
Emilio.....

Sonoma city PD is dispatched by the Sonoma County SO (Channel 3) at 453.400. They use the same frequency as the SO Valley sub-station units. Sometime around 1 a.m., they go to SO Ch. 1 until later in the morning.

now we know that 'allsafe' and 'bill cheeks' are the same identity and here hi\e is giving mackie a tough time about the same thing bill cheeks is so stupid he does
not see that we know he is the same identity as 'allsafe' because he is always causing the trouble on this newsgroup we should elect a moderator of this forum and direct him to kick cheeks out of here except cheeks would probably just come back as one of his other identities and cause all the same troubles again.

i was on fidonet back then and i don't remember mackie causing any trouble rather i remember cheeks acting like some holy GOD on the echo and making everyone miserable and wishing they could take him out of the moderator position but there was no way anyone could do it so he stayed in many people asked him to hold an election for the moderator position but he refused. of course he knew that if an election was held he would have been immediately removed as the moderator of that echo because no one wanted bill cheek the only way he got it was because he was butt buddies with the moderator before him and he inherited the moderator position.

Remove the second, anti-spamming N from the end of
tdragon in my address to respond,
tdragonn@blarg.net

I have the following items for sale or for trade.
I'm interested in HT equipment, mics, batteries, etc. I'm
also interested in radio scanners. Anyone got a Pro-42? I'd
perfer to sell this stuff for cash. Make me an offer on
what I have.

• 99 call Caller ID box. Shows time, date, caller's
name, and caller's number all simultaneously. And, when not
in use, shows current time and date. Comes in origional box
and with batteries.
• Two 14.4 external fax modems. Both are in working
condition and come with the needed powersupply. One is a
USRobotics Courier with manual, and the other is a Motorola
Fastalk without the manual.
• Red security telephones. These are the wall hanging
phones used in airports and larger hotels. they have no means
of dialing out, but are otherwise fully functional. they'd be
great for use in the garage so you don't have to run through
the house to answer a call, or in the kids room. I have two
of them.
• Fone Flasher 2. This is RS's origional. Has a strobe
light that flashes when the phone rings, and a built in
ringer. You can have one of the two, or both simultaneously
when the phone rings. Great out in the shack for when you
don't want to be disturbed by additional sounds.
• Composite computer monitor. This is a left over
from the days of the apple IIc computer. It's monochrome
green and has no internal speaker. It would be great for
an on-site display for video work, amateur video applications,
and for video editing.
• 12v 2Ah Sealed Lead Battery. GE Part number 1CVA156.
• Helium neon laser tube and power supply. 1 milliwatt
output. mostly a fun little toy, great for parties.
• Compaq 286/LTE laptop. Backlight display, 1.44meg
floppy drive, internal 2400 modem, modified to run off of
ni-cad C batteries instead of proprietary battery pack, and
fully MS-DOS 6.22 compatible. Batteries not included.
• 82mb 3.5" IDE Hard Drives. Tested and none have
bad spots. I have two Maxtor, and one Western Digital.

• 125mb 3.5" IDE Maxtor Hard Drive. Tested and has no bad spots. These hard drives would be great for adding space to an existing system, or keeping the kids' homework and games on a separate drive.
• As a side-note, yes, everything works.

3706. RS PRO-2026 MOBILE/BASE SCANNER FOR SALE

Newsgroup: rec.radio.scanner

I have a RS PRO-2026 mobile/base scanner for sale. It's looks are 8/10. The price is $150 shipped. I would prefer to sell but trades for radio gear are considered. Please e-mail if interested. Here's the full list of features for the scanner:

-volume, squelch
-scan and search
-100 memory channels (5 banks 20/bank)
-1 monitor channel
-lock out, delay
-1 priority channel
-built in speaker
-1 touch weather, air, fire, marine and police bands
-mounting bracket, home stand
-owners manual, original box, and power cords
-RS telescopic indoor/mobile antenna
-29-54, 108-174, 406-512, 806-956 MHz (minus cellular)

Hello. I have a Cobra Trapshooter 3 Radar Detector for sale. The price is $30 shipped. It's in excellent condition and has only been used slightly. E-mail if interested. Will consider trades for radio gear. Here's all of it's features:

-Signal Strength Lights
-Mute Button
-Dim(mer) Button
-City Feature
-Volume Control
-Built In Speaker
-Detects K, Ka, and X Band Radar
-Alerts You With Lights And Sirens
-Windshield Mounting Bracket
-Cigarette Lighter Power Cord
-Photocopy Of Owners Manual
-Hams: Can be used to test 10 GHz equipment

The reason for John's familiarity with rules of thumb
is that he has 5 of them on each hand. This is a genetic
defect known to occur in hermaphroditic brained quadra-
sexuals, especially those with excessive inbreeding in
their lineage.

Yes they do. Ijust got rid of my 2500 cause i was tired of buying batteries
for it. Mine would only last about 1 year. Uniden says the batteries should
last 1 year to 1 1/2 years.

So yes that is exactly what they do. Now you need a $30 battery or you have
a paper weight...

For Sale:Pro 2022 scanner
200 channels.
Comes with manual and antenna.
This radio has not been powered by the internal transformer.
All though it has an AC cord I used an external power supply.
This was done to save internal components from heat damage.
This radio also has a on-off switch mod for the backlite display so it saves
the backlite panel in daytime use.
Radio is in very good shape.
Cellular mod has been done also.

185.00 shipped

Well, I'm not going to waste time arguing with you. You are stating what you "expect" the reception would be, and I am speaking from experience. Using a standard rubber duckie antenna (glorified dummy load), all the weather channels are full as well as most of the 2m repeaters. Ditto for UHF Public Service band. When I'm listening to Minneapolis, Minnesota police on 460Mhz as the pilot announces that "we are now flying over Peoria, Illinois", that tells me the reception is pretty darn good.

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase costs $34. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited

selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

| PRO DATA

| Pro Data is a database manager program for license data. It does not come
| with its own data but can import data from APF, Percon, ScanWare, and
| UFDBF database files.

| Pro Data costs $60. For more information, write to prodata1@gte.net, or
| visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

Hi gang:

I am wondering if there are other web sites that are like
policescanner.com that have PDs _OTHER THAN_ Dallas, Plano, NYPD, and
LAPD that are on RealAudio LIVE!!! If ANYONE knows of such a site,
PLEASE
pass along this information (I'm VERY impressed with the way
policescanner.com have put the four aforementioned PDs online in
RealAudio).

As an alternative and/or addition, I could also use some info. on
websites with AMBULANCE (i.e.paramedics) _AND_ hospital ERs online as
well, although my main preference are PDs as they usually wind up taking
care
of paramedics and ERs anyway.

I look forward to your replies..... :-)

Most scanners will pick up those frequencies without modifications and
just about all come with an earphone jack.

Not that I don't have friends on the Police department, but we
(Paramedics) usually take care of THEM and they take care of our
tickets... :)

It was on sale through the end of December (I believe nationwide); the RS near me (I live in Massachusetts) had it on sale in early January. I thought the sale was still on, but it's not. Nevermind.

Get a grip.

You lack an essential
ingredient in the
process...it's
perspective and
a sense of the
mundane along with
a smidgen of sarcasm
and a bit of wit
and a whole lot of
humanity and then it
is your problem with
a dead-pan brain with
no humah inside.

you are devoid of life.

open up and grin...pull your
pants up and turn around when
you smile...

bill conduit
etc.

the reason that you can't hear the control on the VHF freq is you can only hear the tower side of the conversation if you are real close to it, and the reason that you are hearing the UHF real clear is because those freqs are generally more stronger. i don't know what to tell you about the UHF freq being turned on and off though

You can mail order directly from Optoelectronics. Their number
is 1-800-327-5912. You have to pay $20US shipping, GST to the
customs people, plus another $40 or so for the customs brokerage
company. I ordered a Scout from them and got it in about 10 days.

>
> ANyones used this?

Notice the web advertisement claims "high gain" but doesn't (based on the above) give a gain figure!

Also, it certainly should work a lot better than the standard OEM scanner antenna, but a paperclip could too.

I dunno how much Grove is selling it for, but you can get a custom-made 800MHz handheld antenna, on a center-freq of your choice & with the connector of your choice, for about $15 from Centurion.

Or you could get a 3, 5, or even 7dB cellular phone antenna for under $30 & use it for general 800MHz receiving.

If the antenna you're talking about is the same thing as the old Cellular Security Group MAX 800, it appears to just be an 800MHz quarter-wave, made with about $3 worth of parts.

Bob,

I always thought the RTO's (dispatcher's) receive audio source was the repeater's INPUT frequency. Simplex comms on the output, therefore, would not be heard. Officers in the field use the output in simplex mode quite a lot for local communications and the RTO's always talk right over them. Heck, on frequencies used by more than one division, an RTO from one division will talk over a mobile from the other division. The second division's RTO still hears her unit.

The RTO's sidetone probably comes from the mic audio circuit - not the repeater's output frequency (although that's where the audio eventually goes).

When I used to do Hamwatch (years ago...) with the LAPD, we regularly used the trigger channel simplex on our Rovers since we couldn't always get a tac channel assignment. The only times we got "yelled at" by the RTO's was if the radio got switched to Duplex by mistake. As long as we stayed on simplex nobody ever complained.

Of course these days there are a *few* more tac channels! So the emergency trigger channel should be used only for that purpose.

Speaking of LAPD tac channels, now that Tac-4 is used for the Metro Red Line instead of Central Bureau Tac, has there been a re-alignment (or re-assignment) of bureau tac channels?

Rich.

Actually, units will occasionally use the output of 'Trigger' for
simplex tactical communications.

On the other hand, I have heard field units get chewed out for trying
to use the trigger channel to inform the comm center of 'non-emergency'
situations like injury TC's 8*(

To address the original request - as soon as MODAT tones go out over
the trigger freq, the comm center puts out an announcement that
ROVER ### has activated his/her trigger... all decoding the MODAT tones
in that context would allow you to do is confirm the identity of the
ROVER...

Which is not to say decoding is without merit. It's a fun technical
project, and you could imagine using such a program to do traffic
analysis and the like. ...Might also come in handy if you've got
to identify the officer on graveyard that keeps yawning into his
mic... but that's another story 8*)

AVCBOB (avcbob@aol.com) wrote:

Note many folks just don't have a license and will buy anything that talks on the same freq with something else, like buying two radio shack portables to go, legal or not! Most stores only sell the low watt stuff that needs no license for the public to start using right away off the shelf. I even found people using the marine radios to talk to each other even though it is quite illegal, these radios are fairly cheap have five watts and lots of channels to be sneaking with. Oh lets not forget the ever wonderful hand held CB radios, they not too popular because of range and noise thank god.

I am needing information on a specific frequency range. In Tennessee, the state police use frequencies in the 70-75 megahertz range for repeaters(mobile and base relays). Is there any modifications available for new scanners as TrunkTrackers or any receivers on market that will receive this range? Thanks, and please, reply directly to : AreYouABBW@aol.com

>simplex tactical communications.
>
>

Hi Brent,

Yes, they do sometimes do this, but they aren't suposed to. The dispatchers hear field received audio as their sidetone. If a dispatcher happpens to be monitoting the emergency channel, they will hear the simplex comms.

This applies to all of the originial dispatch channels. All of the sidetone audio is received from the field and sent to the dispatchers ear.

Bob

Extended warranty is nothing more than breakage insurance and a big
money maker for the shack (why do you think they push it so heavily).
96% of my electronic purchases have lasted more than 5 years, usually
much longer. The money for all the extended warranties on the 96% will
more than cover repairs on the 4%. Plus in 5 years there will be a much
better, feature laden model that will probably cost half of what the old
one cost you. Next time you purchase the extended warranty, observe the
big smile on the salesman's face.

ATCRBS polls on 1030 MHz and Aircraft Transponders reply on 1090 MHz. They use a pulsed reply which can have up to 4096 codes.

But this won't help much. The aircraft are probably right where they're supposed to be. There's probably a new instrument approach or departure procedure in to a nearby airfield which is used only when conditions warrant. As long as that approach or departure procedure exists, you will hear those aircraft.

You could lodge some complaints with the airport management. Don't expect a sympathetic ear, though.

If you live anywhere East of the Mississippi river in the US, I have a set of instrument approach and departure procedures for your area. If you'd like, e-mail me which airport is nearest to you and what your latitude and longitude are. I'll look up all the relevant approach and departure procedures and let you know which ones are the likely culprits.

You'll have the satisfaction of knowing what's bothering you, even if there isn't much you can do about it.

3774. Problems with FCC Database - Second Attempt

Newsgroup: rec.radio.scanner
Date: 1998-02-02 00:00:00 UTC
From: madscanner@hotmail.com
Message-ID: <34D62D68.73E3@hotmail.com>
Source record: 171652
Cross-posted to: rec.radio.scanner,alt.radio.scanner

To anyone who attempted to test the FCC's beta search engine and found javascript errors getting in the way, please try again now--they've been fixed, at least for the functions in question.

Go to http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts and select "State/County", "State/County/Frequency", or "Frequency". Supply whatever search parameters you wish, just so that your search results in some matches in the "WTB LAND MOBILE DATABASE." If there are any matches, you will come to the database selection screen. From this point on, your luck should turn sower -- clicking on "WTB LAND MOBILE DATABASE" will yield no response from the server, no matter how long you wait for one.

Netscape users' browsers should go as far as "Transmitting data from gullfoss.fcc.gov:8080..." appearing on the bottom status bar. IE users should simply see "Contacting..." or something similar. But in both cases, once you've requested that DB, nothing should come back.

On the other hand, if you were to perform a "Callsign" search back at the main menu, and towards the end of the search process clicked on the "WTB LAND MOBILE DATABASE" selection, then there would be no problem accessing that database.

I'm hoping that a few of you would test this from your ISPs and post the results so they can be forwarded to the bug people. Like said, it would be nice if more than one person were reporting this, as it's very easy to dismiss one trouble report (ie mine) as a fluke. :-)

Thanks all...

Lord, ain't it the truth? They (and they means everyone from Radio Shack to Sears) make up lost profit margins on consumer electronics by sticking the unsuspecting consumer with a completely valueless extended warranty. Electronics products are so reliable (and typically well tested before leaving the factory) that buying one of thse insurance policies is a sucker's bet.

Radio Shack has their portable scanner #20-512 (I think it is the pro 67) on sale for $149.00. Just wondering if this is a good deal and worth the money?? I wanted a Uniden BC235XLT but I don't have the money. So... Should I jump on the RS or wait?? By the way I am currently using a Bearcat 800XLT. Please read below on how to reply, thank you..

That was National Bureau of Standards, which was re-organized and is now
part of National Institute of Standards and Technology (NIST).

> http://www.boulder.nist.gov/timefreq/wwv/wwv.html

I can highly recommend this page. It's the next best thing to a personal
tour, and they even show you the view from the tower! Tube radio fanciers
can gawk at some really cool transmitters.

This is this the description from the websight.

High Gain 800 MHz Portable Antenna

Receive better clarity in the 800 MHz range!
ANT 22 The Max Systems antenna will make a tremendous improvement in the 806-960 MHz reception over the whip provided with your hand-held or desktop scanner! (Not usable in other frequency ranges.)

ANyones used this?

Can you hook up 2 antennas at one time, like this one plus one with full range coverage?

I am interested in purchasing my first scanner. I have just noticed that the Radio Shack Pro-67 is now on sale for $150. Is this a good purchace?? It was listed as a "new" model in the 1998 catalogue, and now it's listed as a clearance item. Is there something wrong with this model? The price is right for me. I just want to make sure that there is nothing wrong with the scanner. It seems to have good features. Does it?

Any and all help would be greatly appreciated. If this is a good scanner and now for the lowered price, I would like to move on it before the sale/clearance ends.

Thank you

Bob

Let's see, removal of the CPU/Logic board from the Pro-2035/2042.
Everything is from memory, so don't quote me on it....but it will be
rather close.

1) Unscrew the stock antenna if it is connected.
2) Remove the 4 screws on the back holding on the top and bottom
covers. Remove the covers....lift up from the back about and inch and
then slide them backwards.
3) Take note of the various wire connections from the front panel of
the scanner. Unplug all of these connectors. Don't just pull on the
wires, you need to undo the plugs.
4) Remove the 4 screw holding on the front panel. Pull off the front
panel. Lay the front of it on a soft cloth on the work bench. The
front panel includes the keypad PCB and the CPU/Logic PCB.
5) Remove 4 screws holding on the metal RF shield. Remove the RF
sheild. These screws also held the CPU/Logic board in place.
6) Now you should be able to see the CPU/Logic board right in front of
you. It is connected on one side with header pins. Slowly pull it
straight off.

That should be about all there is to it.

3802. MDT help

Newsgroup: rec.radio.scanner
Date: 1998-02-02 00:00:00 UTC
From: "-=[VOiCES]=-" <voices@apoc.net>
Message-ID: <6b61gu$k3l$1@m5.nassau.cv.net>
Source record: 171680

Hello,

I have been using MDT.EXE software from rec.radio.swap and have had a lot of success with it, but I had one question. My local Police Dept (Nassau County, Long Island) seems to be using 3 diff. channels for the MDT's and it appears that the data for all 8 pcts. and DMV data is just spread across the 3 channels. For instance I will hear HQ on all 3 channels, I will hear 1st Pct. on all 3 channles etc..
Is anyone familiar with this system, or possibly knows how this type of system could work. Thanks

-Adam

NEWS RELEASE

FROM: State EAS Studio, Sacramento

SUBJECT: MONTHLY STATEWIDE EAS NETWORK TEST TOMORROW -- THE FIRST TUESDAY OF THE MONTH (Revised 5-7-97)

The State EAS Network broadcast is done on the first Tuesday of the month with
the new EAS terminal equipment required by the FCC. The new script is 25 seconds. In a major change from the 1987-1996 procedure, the monthly State EAS
network broadcast will be transmitted (over the CLERS State FM Relay Network)
at about 10:15-10:20 a.m. so that participating stations may rebroadcast the State Monthly Test anytime of your choosing between 10:25 - 11:00 a.m.

The script for television station character generators is at the bottom of this message.

We will use the DMO or ADM event code --- NOT the RMT code. This is NOT an FCC-
Required Monthly Test (RMT), but it may be carried by any broadcast station or
CATV network. It may be carried in lieu of or in addition to any station's RWT
(Required Weekly Test).

Stations equipped with the old State EBS receivers are no longer triggered by
Touch-Tone (DTMF) over the CLERS. Ample time has passed for stations to meet the January 1, 1997 deadline to install their new EAS decoders; most LP1/LP2 stations in California served by the CLERS are required in their EAS Plan to have a CLERS input on their new EAS terminal.

Here is tomorrow's timetable:

TIME: 9:15 AM Heads-up, closed circuit reminder. The ADM event code is used. After this statewide transmisson, the State EAS Studio
broadcast volunteers make telephone calls to selected LP1
and LP2 stations to assure personnel and hardware are
operational. All others with the new EAS terminals and
equipped with a CLERS receiver are encouraged to respond and
comment to **deleted**

10:15 AM State EAS Studio transmits the feed for stations to
rebroadcast. It consists of the three digital headers, the
8-second EAN "EBS" tone, the 25-second script, and the
three
End-Of-Message digital bursts.

-0-

TELEVISION STATION CHARACTER GENERATOR SCRIPT FOR THE HEARING IMPAIRED:

THIS IS THE MONTHLY STATEWIDE TEST OF THE CALIFORNIA STATE EMERGENCY
ALERT SYSTEM. THIS MESSAGE IS ORIGINATING FROM THE GOVERNOR'S OFFICE OF
EMERGENCY SERVICES IN SACRAMENTO.THIS SYSTEM IS USED FOR WARNINGS AND
ESSENTIAL SAFETY INFORMATION DURING EMERGENCIES. AT SUCH TIMES, TUNE TO
A
PARTICIPATING RADIO OR TELEVISION STATION FOR DIRECTIONS, SAFETY
INSTRUCTIONS AND OTHER OFFICIAL INFORMATION. THIS CONCLUDES THIS TEST
OF
THE CALIFORNIA STATE EMERGENCY ALERT SYSTEM.

Well, you could monitor only emergency calls by decoding the MODAT, but, all emergency calls are automatically switched to the Emergency Trigger freq. So, all you need to do is monitor that freq. No other traffic is allowed on that channel.

>
I was on the fidonet echo long before Bill Cheek became moderator and for a long time afterwards. I remember mackie causing the same type of trouble there that he does here. The first warnings he got were very polite, but mackie never could take a hint. So he got the boot. You have to remember that Fidonet echo moderators own their echo. They get to make and enforce the rules. When a moderator steps down, he/she gets to select a successor anyway they want. There is no requirement for an election.

I have yet to see a posting from mackie, either here or on fidonet, that was helpful to the other participants. Instead he acts like a 5 year old playing with his dad's CB. Intentionally causing interference just to get a reaction. If we could all ignore him long enough, he might actually get bored and leave.

Does Uniden offer a 5 year warranty for $65 like RS? Research will prove that RS offers better servicers than Uniden. So which is really the better deal? Let's face it, anything can and will go wrong with electronic equipment 9no matter how much usage). End of story on this subject!!!!!!!!!!

You gotta be kidding, I just bought a 235xlt and it was $269.99, I see 2 gig WDC drives at the computer show for less that $100.00 all the time.

I'd be extremely surprised if it wasn't. In theory much of your
journey will be International waters, and there it is definitely
legal. I have to question the usefulness however unless you are in
port.
>#2 Is there any on-board communications I could expect to hear
>including ship/shore type transmissions, and does anyone have any
>frequencies or know of a web page to check?
When coming into port, VHF/UHF is probably used, however HF has given
way to the SATCOM for just about everything else. The Inmarsat sat
uses a highly directional dish antenna. I doubt you will be able to
hear either side. There is usually a radio operator and/or ships
electrician who can probably provide information on the frequencies
utilized.

Newsgroup: rec.radio.scanner
Date: 1998-02-02 00:00:00 UTC
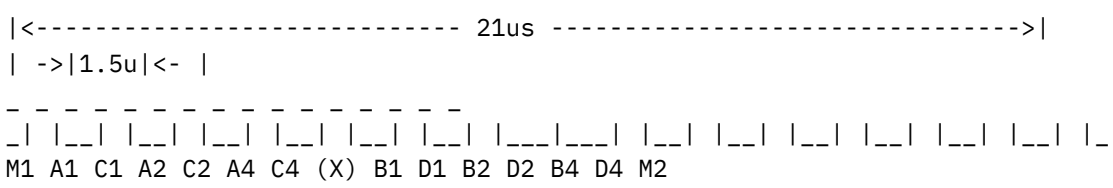
From: mulligan@ACM.ORG
Message-ID: <6b40rs$fqu@HOPPER.ACM.ORG>
Source record: 171697

Dave Cross asked:
> Does anyone have a reference to the frequency, modulation type, and
> format of conventional commercial aircraft transponders?

The interogation signal from a radar site is a pair of pulses on 1030 MHz.
The spacing between the pulses is either 3, 5, or 8 usec, corresponding to
Modes 1, 2 or 3.
The transponder's reply on 1090 MHz is a train of up to 14 pulses,
1.5 usec center-to-center. The outer two pulses frame the reply. In the
aircraft ID mode, the 12 data pulses make up four interleaved octal digits
i.e. 0000 - 7777.



M1, M2 bracket pulses (required)
A4, A2, A1 3 bits forming one octal digit (Mode 3/A)
Bn, Cn, Dn same format as An

Since a full pulse train is equivilent to a 666 kHz square wave, it's
unlikely you could recover an intelligble signal from a normal receiver.

So let me get this, you paid $365, to get the radio, one battery, and a 5 yr warranty?
I paid $299, to get the radio, two battery's, a charge cradle, and a one year warranty.
It seems to me that every time I recall dealing with a RS warranty, I had a major hassle.
I also recall feeling that I had wasted my money, because it was never quite fixed.
You might have to send in the radio w/ Uniden, but it will get fixed right, w/o a hassle.
You definately can't say that about RS.

The Real End of Story!

Cutie Boy,

She's probably using a 49 MHz portable phone and the 3rd harmonic is 147 MHz.

Wait for a sale and buy her a 900 MHz cordless phone -- I've seen them for $50! Just explain the situation to her politely. It's probably the the best thing to do for your neighborly relationship.

FWIW, I have wands made by "Vessel" and "Engineer". These aren't
cheapies
but they are very good. I think the unusual tip you are talking about
is the cross-hatch variety. There is a proper tool - but I don't bother
as a small slot 1.8mm will work just fine.

> Settling is lightning quick to be sure. A touchup
> might be okay after a few minutes, but that's rare.

In my experience, the frequency is most likely to drift if the
temperature changes (usually up!). I guess this could be a concern
if the radio was used mobile.

> Sure can. Same thing as a lissajous on a scope.

Yup! This is a very useful thing. It's also good for aligning the
azimuth of tape heads.

> No, but the X-301 is a master reference for the PLL,
> soooooo......???? The only L.O. that's not controlled
> by the PLL is the 3rd one at 48 MHz. But it's okay.

Noted. But the IF can drift too in which case tweaking up the TCXO
won't be enough.

> Well, you have to have a known reference, and since the
> TCXO is 10 MHz, and WWV is 10 MHz,....chaaaa--chingggg!

This is a cheap and dirty way to do it. But using one's ear to zero
beat is probably not that great of an idea. You'll get close, but given
the Fref is only 10MHz a small difference, say 40Hz becomes much greater
at 1GHz. Hmmmm...now that I think of it, the difference won't be much,
will it?

> Six of one; half dozen of the other. Very true in PRO-2004's
> which are very likely to drift out of alignment with aging.
> Not so true of the PRO-2005/6 and 2035/2042..... these
> seem to hold like rocks. But the TCXO's can sometimes still
> benefit from a touchup. Depends on the accuracy of the counter
> that originally checked it.....

They are rated in PPM and drift (typically) over one year. The rating might be 3PPM +/-1PPM/year. So the drift, I guess, could be considered normal. I don't know what the value is of the PRO2006. I suspect it's not that wonderful. Perhaps replacing with a 1ppm would be a good idea?

> I don't think so. Tune to a NOAA weather broadcast and it's
> plenty good for tweaking IF cans and discriminator coils.

Woah! Now, this is where I definately disagree. The only proper way to tune up an IF section is with a sweep generator. You can do some funny things to IF stages by "tuning for max". I can elaborate on this if anyone would like.

As for you, Mackie and others. You should adopt a plan like one of the humour groups I belonged to did. You could lambaste anyone you wanted to - but make sure your messages have some relevant on-topic content! 8-)

Cheers!

Kansas Column 02-98

Greetings from Gardner KS, the cultural center of North America!

This month we have:
1. KHP/KDOT update for Garden City area.
2. KU Med Center trunked system on line.
3. Trunked radio system monitoring by computer...kinda sorta.
4. St. Joseph MO trunked radio system.
5. Motorola Trunked systems in the KC area.
6. Closing in on the frequencies for Olathe's "Great Mall of the Great Plains."
7. Tidbit about Kansas City MO's Ericsson system.
8. FBI and digital scrambling...will not work at great distances!

---

1. From Dale in Garden City, we have the following details on the KDOT/KHP system that is slowly forming in his area. The first part is a direct quote from one of his e-mail messages.
"KDOT is going to install an 800 MHz repeater on the Dighton tower in Lane County. It will have an 800 MHz control link at Scott City. They are sending 10 ht's for the KDOT units in the Dighton area to use. I guess this is temporary until they can get some phone lines and other things done for that area. Seems like a lot work for a temporary setup. Five cell phones may have done the trick although it will provide for some new listening in this area. They may also leave it there when the new 800 install is complete." A later e-mail revealed that the tower is on the Ness/Lane county line on highway K-96 with the frequency 855.9625. See the next paragraph for more info on that frequency.
Another goodie from Dale centers around the statewide KHP conventional frequency 855.9625 and 855.7375. The first one is confirmed as in use by KHP for car to car traffic, but Dale speculates that the latter is a car to car frequency for KDOT. I just got off the phone with KDOT in Olathe, and they confirmed that they do indeed have a car to car channel, but he was not sure of the frequency. He said to "Come on down!" and look at the license if I wanted to make sure. As a side note, they cannot actually call it a car to car frequency because they took all the radios out of all the vehicles. The KDOT folks (at least those here in Olathe) now have only portable radios. I guess it is actually a "portable to portable" channel.
He also found a listing for a nationwide Fire mutual aid frequency-868.9875 while sifting through the Internet.
Dale had a question about 867.6750 and 868.6125. The lists floating around indicate they are for KHP, but they don't show up in his copy of

Police Call. Around here 867.6750 is KU PD in Lawrence. The other one,
868.6125, belongs to KHP at Xenia. Thanks to Don from Hays for the info
on that last one.
By the time you read this, the Bazine KDOT repeater should be
installed. The frequency is 855.1000, which is not in any list that he
or I know of. Perhaps it is a temporary license. He says that KDOT,
KHP and State EMS will be on the same antenna setup. For what it is
worth, the State EMS system is not in use yet. I do not have a lot of
information on the EMS stuff, but next month I will pass on what I know.

---
2. KU Medical Center in Kansas City KS has their Motorola trunked system
operational now. The 5 frequencies are:
866.0750 866.4125 866.7375 868.2500 868.8000
It looks like Trunktracker code 176 is the dispatch talkgroup and 464
is the escort (taxi service) talkgroup. We will keep an eye on that
system and keep you updated. I wished I would have had time to monitor
them when baby Carlie was kidnapped. It might have been real active.
(Thank goodness Carlie was found and reunited with Mom.) Thanks for the
information, Kirk.

---
3. There have been some recent breakthroughs in the hobby, and I am just
now getting in on some of them. One is the Trunker program. Do not
confuse Trunker with Uniden's TrunkTracker radios. They are not the
same. A friend of mine (I won't mention Rodger's name) explained to me
that a bench full of fancy radios and great computer knowledge is not
needed to utilize Trunker. Good...because I have neither.
In a nutshell, Trunker allows someone with 2 scanners (one must be from
a list of specific radios that can be controlled by computer) to follow
trunked conversations in a Motorola system. One scanner listens to the
control channel and pipes the information to the computer via an easily
constructed interface. The second scanner gets its orders from the
computer and is switched to the correct frequencies to follow a
conversation. There is more to it than that, but you get the idea.
I don't have an ICOM R7000, an AOR8000 or any other radio that conforms
to the Trunker program's requirements for radio #2 (OK...I lied. It
does take one fancy radio.) so I have only the first half running which
allows me to watch all the activity on the trunked system. Why do only
that, you ask? Well, the Trunker program does not need to know all the
frequencies in a system. All it needs is a control channel and it lists
the frequencies for that system as they are used. It may take a while
before all frequencies are discovered, depending on the activity of the
system. It makes a unique research tool to use with a TrunkTracker.
BTW, Rodger has the complete system working with an ICOM R7100
and an AOR8000. He says it operates fine. It needs some refinements
and added whistles and bells, but that is in the future, no doubt. As
far as I know, the folks who are developing this thing are not getting
paid a red cent, so we cannot complain too loudly.
Using this setup, I discovered a trunked system here in the Kansas

City area that has a frequency arrangement that makes no sense at all. The frequencies appear to have been selected using the same method the outdoor time and temperature signs at banks use to display the temperature...which is completely random and has no apparent correlation to anything known to mankind. Here they are:
851.2625 851.4625 851.5125 852.2625 852.3125
852.8375 853.0125 853.8375 855.8125 856.9125
857.6875 859.6875 860.6875 861.0625 862.0625
863.0625 864.0625 865.0625 865.9375
See what I mean? I thought freqs below 856 MHz were always conventional repeaters, and trunked frequencies were generally issued in groups of 5 that are 1 MHz apart. Without the Trunker program I would have never figured out the frequencies. It sounds like a bunch of business subscribers such as maintenance people, trucking companies, and tow trucks. If you wish to listen to it, try fleetmap E1P1. Seems to work for me.
So, find the discriminator output on your scanner, build the "data slicer" interface, download the free program (did I mention that the program is free?) and get going. What is even neater is the fact that an EDACS version is out there, too. Currently it will not control a scanner, but no doubt someone who can write code will cook up a fully functional version.
If you want to give either of them a whirl, check out this site.
http://web2.airmail.net/lblant1/dfw/digital.htm
The site has different versions of Trunker, but I recommend version 3.5.2. There are several links to pages which have schematics for the data slicer. The one I used is listed as a "better picture" of the standard Hamcom interface. It requires about 10 parts, a length of audio cable and a plug. Real simple.
IMPORTANT!!! The picture of the interface shows one wire going to pin 6 on the DB25 connector. It needs to go to pin 5...not pin 6 as indicated. It simply will not work in this application the way it is shown. Everything else is fine.
IMPORTANT!!! If you build it and stuff it into the DB25 hood, use the plastic unshielded hood...or insulate the bottom of your circuit board if you use a silver hood. They conduct electricity. I built one and tested it before I put it in the hood. Worked fine. Put it in the hood and it didn't work. Took it out...it worked. Put it back in...it didn't work. Aaarrrgh! Drove me nuts until I realized it was shorting out my circuitboard. Once I put a piece of insulating plastic between the board and the hood it fired right up.
IMPORTANT!!! The program works in MS-DOS only...and that doesn't mean a DOS window within Windows 95. You must go to Start, Shut Down, and Restart in MD-DOS mode. Not knowing that fact cost me several days of wrestling with the computer. That also means that you cannot use the computer for anything else while running Trunker. Hey...what do you want for free???
On the lighter side of electronic construction, I built my first slicer to exacting specifications and eagerly hooked it up and executed the program. Nothing. I checked my work, re-read the documentation for

the program and tried it again. Still nothing. Triple checked it...still nothing. So I built another one. When the second slicer was finished, I went to pull the IC from the first one to put into the second one. That is when I realized I had never put the IC into the first slicer. Once it was inserted I noticed a marked improvement in performance.

The discriminator output of your scanner can be found by going to the following web site:

http://web2.airmail.net/lblant1/trunked/trunker/discrim.txt

It is no big deal to put a discriminator jack in your scanner. It requires one capacitor, a small chunk of audio cable, and the jack.

The following address is a site by one of the many Bobs that contribute to the column. Not only does it have information on Trunker, it has a big list of miscellaneous text files of interest to us scanner geeks, and an archive of many of the Kansas Columns. It is worth a look.

http://www.crcltd.com/sm0ke/scanner/

The EDACS version of Trunker is really of little value as a true scanning tool the way it is since it will not control a radio itself, and no EDACS compatible scanner exists. Those facts did not phase me in the least. If it was out there I HAD to have it! If nothing else it assures me that EDACS Trunktracking is just around the corner...whether it will be a self contained TrunkTracker scanner or a dual scanner setup with Trunker software.

Those of you that got this via the computer obviously have a computer. Those of you that do not have a computer need not feel left out. These programs don't need an "Oh-my-gawd" 233 MHz sizzler computer that costs thousands of dollars. I have an old 386 machine that runs them fine. You can find older technology equipment for a little bit of nothing...often nothing at all. Some people literally give them away. My first computer set me back $75 for the computer and monitor. So poke around and dig up a cheapie computer and try it out. If anyone wants copies of the documentation and software, let me know.

---

4. Wally lives and works in St. Joseph. He is familiar with the Motorola trunked system in use there and has these words about it. I will simply insert most of his e-mail message for all to read. The frequencies are "...856.4875 - 860.4875 PLUS 855.3375 added about October. Yeah - it is basically everything the city has except police and fire. Actually the three battalion chiefs on the Fire Dept. have a fleet and the Police's strike force has a fleet which is encrypted occasionally. My agency, Allied Arts, operates a big festival called Trails West! the 3rd week in August, and we have three radios with a fleet to ourselves also! Over the years I have gotten permission to add the "Citywide" Fleet as well as Animal Control, and Housing Authority (I am on that board and we borrow their radios during the festival), so I scan 4 fleets with my Motorola MTX radio - a very plain Jane with no autopatch or display but even still cost us $600 each! When finances permit I will get a trunk tracker and post the fleets. Basically SIMR (Street Improvement Maint and Repair), Parks & Rec., are the big users,

but others include the three above, airport operations, health Dept.,
etc.!"
Thanks for the input, Wally!
---
5. Next is a list of Motorola trunked radio systems I discovered while
using the Trunker software. Not all frequencies in each system are
necessarily represented in the list Trunker makes. It will list only
those freqs that it actually hears. If, for some reason, a frequency is
truly part of a system but is not used during the time Trunker is
listening, it won't show up in the list. If there is a freq that I know
belongs in a system but Trunker did not insert it, I will add it to the
list and put an asterisk (*) next to it.

KU Med Center
866.4125 866.7375 866.0750 868.2500 868.8000

Unknown System
855.3625 856.3375 857.3375 858.3375 860.3125

Johnson County KS
856.9625* 857.9625* 858.9625 859.9625* 860.9625
866.2625 866.8875 867.8250 868.3500 868.7750

Unknown System
857.0625 858.0625 859.0625 860.0625

Bob knows the name of this one. He told me, but I forgot. Andy
851.2625 851.4625 851.5125 852.2625 852.3125
852.8375 853.0125 853.8375 855.8125 856.9125
857.6875 859.6875 860.6875 861.0625 862.0625
863.0625 864.0625 865.0625 865.9375

Raytown MO and other businesses
856.1375 857.1375* 858.1375 859.1375 860.1375
856.5625 857.5625 858.5625 859.5625 860.5625*

Unknown System
858.8125 859.8125 860.8125

Kansas City KS all city services
856.7625 857.7625 858.7625 859.7625 860.7625
856.9375* 857.9375* 858.9375* 859.9375 860.9375
If you put these in a TrunkTracker, but find no data channel, you can
assume the data channel has switched to a frequency that is not
reflected in the list. You might try entering some of the frequencies
that follow the usual mathematical progression found in most trunked
systems. Let me know if you discover more frequencies.
---
6. Periodically the wife, the kids, and I take the buckboard to town for
supplies (which means we take my wife to the mall in Olathe) and I sit
in the parking lot and attempt to find the frequencies for the Great

Mall of the Great Plains. That is a new shopping center in Olathe, and they have Motorola 800 MHz radios. While searching the inputs to trunked system frequencies, I finally heard them on 816.0875. There was no doubt to the identity due to the signal strength and the context of the conversation. Add 45 MHz to that and you get 861.0875. Look in the list of trunked systems in the previous section and you will notice that it is conspicuously absent.
Could they be doing a simplex thing...or perhaps a conventional repeater? Searching through the FCC files has yielded no results.
Anyone got an idea?

---

7. For what it is worth, Kansas City MO actually has 2 separate trunked systems. One is a 5 channel system in the Plaza area. The other 20 channel system covers the rest of the city...or at least is supposed to cover the rest of it! Anyway, the most dead spots were in the Plaza area, so Ericsson put in some towers and equipment to help out. The officers/firefighters/EMS/PW folks do not notice anything different when using either of them. They simply switch to the talkgroup they need and the 2 systems apparently deal with patching them together. I might not have all the details correct, so Bob, let me know if I am incorrect.

---

8. Another Bob decided to scan the local FBI freqs during the aforementioned kidnapping of the newborn from KU Med Center in Kansas City, KS. As usual, most communications were encrypted, but he said that as the agents traveled farther away from the KC area, they switched to clear transmissions because their dispatchers were having difficulty copying them when scrambled. I had heard that DVP/DES reduced the useable range of a radio, and this pretty much confirms it.
For those of you that did not see it on the news, a 7 hour old baby was snatched from her mother by a couple of pinheads. Surveillance cameras caught the idiots on tape, and their picture was broadcast by all the TV stations. Sure enough, someone recognized them and less than 24 hours later they were in custody and baby Carlie was in her mother's arms again. Good work by all involved!

See you in March,

Andy

Some people just can't see a train when it comes at them!!! In other words , they are too stupid to see what's good. I paid $310 for the scanner (it has since been sold even cheaper if you watch this newsgroup and ads) and I have had a problem once repairs on a unit I had to send to RS. Any idiot knows that you will get that no matter who/where you send anything to get fixed!! It happens. No body is perfect, not even the losers at Uniden!!. Some people just can't smell the coffee!! Check the stock reports and see who the better choice is. End of story.....

I have a Motorola CB Radio (Model CM550) with Sams CB Radio Service Data Book (CB-292). This is a base unit 40 channel AM rig with built in clock/alarm, Mic Gain, Volume, Squelch, RF Gain, PA, ANL, and Mute buttons. The unit is in excellent working condition and looks great!

This is a great collector's piece too! The best offer will be accepted. Then I'll ship COD/insured via UPS.

Thanks for reading this post.

Sincerely,
Chris

I leave my screw in antenna in because it picks up the low freqs <75. The roof antenna only picks up the hight freqs so using the stock antenna is definately usefull. You just won't get the range of the external one.

I have the freqs for our city police. They are using a trunk sys in 800 MHz range. I can pick them up but also the scanner locks in on annoying noises on these freqs when scanning. I think this is normal but I want to know if there is anything I can do about it. There are probably about 10-15 freqs that the police use and on each one of them I hear these noises. Any one have a solution?

FIDO was a great system the way tom jennings origionally started it.
I was involved from 1987 through 1997, I just could not take
anymore, of the god like demeanor of the *C and moderators,
who can say anything good about a network, where the IC claimed to
be re-elected by acclimation.

This is NOT fido. I would rather pay for INET than get fido for
nothing. I do not have to be intiminated by the Fido Gawds.

FIDO was great, when it got started, but it is ready for the shitcan.

Bob

3849. Re: Trunk Tracker for Denver, CO

Newsgroup: rec.radio.scanner

Message-ID: <19980202171601.MAA13861@ladder03.news.aol.com>
Source record: 171727

Arapaho county uses a Motorola system, as does Aurora. Denver uses the GE system. You will not be able to follow Denver with a TT. I believe Wheatridge is also on the Motorola system. The current TT's only follow Motorola system. If you surf over to Trunktracker.com, you will find a fairly good list of systems. Also, if you do a search on any web search engine, you will get quite a few sites that have the information. I have been following Aurora and sometimes Arapaho county for a couple of months. Most of the Aurora ID's are identified, however Arapahoe county is just starting up and I have not spent a lot of time trying to catalog their ID's. Also, I believe the state of Colorado may try to go to a trunking system, however it will probably be a while, since trunking systems are just not very good for statewide type set-ups. Good luck,
Dale

Same here... just remember to leave the squelch totally open or you
will miss everything! ACARS is a burst-packet system that won't work
on a squelched receiver worth beans!

I have also successfully used a Pro-2026 for ACARS.

3853. A word of caution about Denver Radio

Newsgroup: rec.radio.scanner
Date: 1998-02-02 00:00:00 UTC
From: onines@aol.com
Message-ID: <19980202182900.NAA21681@ladder03.news.aol.com>
Source record: 171731

Ordered some radios from DENVER RADIO this last week off their internet site. Received a polite e-mail a few days later from a Tom Youngberg of that store explaining to me that the price quoted on the web was incorrect, they wanted to charge $40 more per radio (almost 17% increase). The explanation offered was that the posted price was several months old and the service provider is slow in updating the site.
This warning is not an attempt to whine or snivel, I'm a big boy and can get over it. It is, however, important for others to know so you don't waste your time ordering something from this firm that they will not honor. Steve (AC6FR)

Buying a Passport ($20) and a magazine sub ($20) are the best
investments a beginner can make IMHO. $40 doesn't buy a radio good
enough to pick up most of the frequencies you might give him for free
(although it might buy a wire antenna)!

Source record: 171772

I have a Hewlett Packard Spectrum analyzer that I used as a spectrum scope with an ICOM R-7000. This analyzer was connected to the 10.7MHz I.F. and easily displayed band activity. I was able to easily determine what frequencies we in use across a wide range of frequencies.

The HP 8591A covers the range of 9kHz to 1.8GHz with a center frequency accuracy of 210 Hz at 1 GHz.

Excellenct addition to the "shack" for the serious monitor.

The spectrum analyzer is in excellent condition.

Price is $5,850.00 plus shipping

If interested email me at jbollit@ix.netcom.com

Jim

3864. Re: Can some PLEASE recommend a decent antenna for my 235XLT Trunk Tracker??

Newsgroup: rec.radio.scanner

Just returned from a RCL cruise to Mexico. I took my dual band Alinco portable with me. The crew members use UHf portables for communications on board (and paging) I can't remember the exact frequency they used but scan 450-470, as I remember it was in the 460 range. Not very interesting though, sometimes conversation was in english and sometimes swedish(?) I never did hear anything on VHf while out at sea. I was surprised how little I did hear, really wasn't worth taking the radio along.
Take a good book to read!
- Sam

The fullsize book also includes non public safety listings. The pocket edition I used to have did not have a listing organized by frequency, the fullsize book has one. The pocket books are OK for in a car or handy quick reference. Also the "Official CT Frequency Guide" folks publish a pocket edition for CT.

>Radioshack has the same kind of filter but it has Coax connectors. My
>question is will the Radio Shack unit work the same with my AOR 2700
>(500khz - 1.3 Gig). Any suggestions would be appreciated.
>
>Tom

Hello Tom- I use the Rat Shack filter on my opto scout with great results. Cuyts out all the fm hits on the scout. Changed the tv connectors to a male and female bnc connector so it goes directly in line with whatever antenna I am using on the scout.Even when I use a preamp in line with the antenna it still cuts the fm out. Alot cheaper than opto's model and probably just as effective. Enjoy. Bob

Has anyone using the BC895XLT found that if there is a cell site or 900mhz paging near by (one mile) that the radio rolls over and dies? Mine won't lock on trunking control channel even when only 5 miles away.Or if it does the audio is very noisy.And this is with just a whip antenna in the back of the scanner! I'd like to hear if others are seeing this problem or if maybe I have a bad radio. Also interested in any mods for this scanner. Thanks , Mike

I apologize for cross-posting to all of the groups, but I was just replying to the newsgroups that the original post was sent to.

The serial number wouldn't mean much at all really. I don't think that you will see many variations in the Pro-2042 models. The Pro-2042 is actually a corrected Pro-2035 model. There isn't anything wrong with the Pro-2035, its a great scanner...but they finally got everything that they wanted to do with the Pro-2035, unfortunately it is the Pro-2042 model.

One thing that would tell when the scanner was manufactured is the date code. I don't know if it would be the same on the UK models, but it is worth a try. My 2042 has a "8A5" sticker on the back. This indicates that my scanner was made in August 1995. Even though the person that you bought the scanner from may have bought it September 1997, it could have been sitting in the warehouse or on the shelves for some time. Some of the earliest Pro-2042 scanners actually had the same green display that the Pro-2035 scanners had. If it has a orange/amber display and a fairly recent date code (June 1995 or so and up), then I don't think there would be any changes that you would need to worry about.

That's because I have never taken the time to change my Internet name
and address. As far as appearing to hide my callsign, here is a little
blast from the past (we all know your abuse of prozac and methadone has
fried the few remaining brain cells you had) to remind you that you've
know about my new call since December 1996. It doesn't appear that I've
been hiding my callsign after all. As usual, I catch you in another lie,
AGAIN.

You know, Toilet Boy, the best part of you was left in the wet spot in
the back seat of a Dodge Dart when your mother "entertained" the
defensive line of the football team in high school. Right after that
she was hired by Rent-A-Wench and rented out to the rest of the area
high school football teams.

You've wasted bandwidth with everything you've posted. Now that you finally got tired of calling people a fool and learned learned a new word (drivel), I expect we'll be seeing it in every post you spew.

> Because we wanted to give examples of how many poor demented
> individuals like yourself have spammed the internet.

Let's see, the definition of spam is to post thousands of articles across Usenet across newsgroups blindly. Nope, that doesn't apply here, so you're wrong again. Now, if you're using it in the context of vomiting millions of inanities, that would definitely apply to *you*, Toilet Boy. Sounds like you and your Phony Amateur Radio Goon-Ball buddies having another circle jerk. It's amazing that Brian Reed and Peter Boe let you up of your hands and knees.

Larry:

No, not yet. Icom has been tight lipped about the programming for the PCR1000. They've also been somewhat unresponsive to their customer's suggestions for improvements to their one, and only program. As a result, they've shot themselves in the foot, marketing wise. However, a few third party companies are hacking the code, and creating their own control schemes, and programs, in spite of Icom's efforts to keep it secret. ScanCat is one, that already has a beta version in the works!

PCR1000... super radio, ho'hum software, but there's hope!

Poor Dickie. He's sore now that he's been brought out of the closet.
See, he used to like to butt-slam his kitty-cat but since the cat gnawed
off his testicles no one will play with poor Dickie. Better pull the
cat's teeth, Dickhead.
See, Dickie had a rough childhood. He used to get teased by the other
kids in the locker room because his member is only 2 inches long. The
cat was the only one that would screw him (besides his mother, and we
all know what a lousy screw SHE is), and now Bill Cheek is the only one
left that doesn't laugh at his tiny organ.
Poor Dickie has to carry tweezers wherever he goes in order not to piss
all over the walls. He thought it was a pubic hair until he pissed out
of it.
Now, realize that he isn't capable of rational thought like the rest of
us and doesn't understand things like heterosexuality so his messages
seem pretty skewed. Instead of getting mad at Dickie, we should feel
pity for him.
In fact, we should start a collection for that penis enlargement surgery
that he hasn't been able to afford on his Burger King salary.
Anybody want to coordinate the Dickie Kendrick Penis Fund?

You can find quite a few places on the internet with a simple search
on one of the search engines. You might go to
http://hem2.passagen.se/jillis/BC200.TXT which gives you the main
three mods that are done to this model.

I have a Pro 43 for sale.
It is in good condition and has the cell band mod.
Includes the factory service manual, users manual, a case that is too big, (it's the case
for the HTX-202) and a telescoping antenna, along with the original antenna.

Apparently something is wrong with my newsreader software because I posted the price but people still want to know the price. +ACQ-250 (two hundred and fifty dollars).

1. legal? Hell if I know!

2. Communications to hear? YES

I took a scanner on a cruise in 1980 and listenned to the maritime VHF frequencies. Our ship, The Fairsea, stumbled upon a Navy missle test area, while heading North along the California coast. I listenned to the Italian Captain of the ship argue with a Navy "Bloodhound" about course changes the ship had to make. fun fun fun

My brother and I went up on deck and loudly discussed, between us, the opinion that the ship was going to make a turn. The turn became apparent from the curved wake of the ship. The passengers paid no attention to us, or the manuever.

I have a weather web page on geocities and it has been working fine the
past couple of days. It is in the CapeCanaveral neighborhood. I did have a
two days outage on Jan 27 & 28, It affected CapeCanaveral but others
remained up and running.
Something happen the past few days. I did find this:

02 February - 18:58 PST (-08:00 GMT)

All restores have now been completed. Thanks for your understanding and
patience while we
worked through this process.

GeoCities Operations Team

You cab always check the status at the address listed below

http://www.geocities.com/members/info/system_status.html

Hope this helps

Save your pennies and just buy a full blown 800MHz scanner (full coverage)
for $150.00-$250.00 depending on how much of a scanner you want. You'll
find it right here.....just keep your eyes open.

Some guy just posted a BC200XLT for $120.00

> purchace??

Bob,
The PRO-67 is a pretty nice little radio. It is made for
Radio Shack by Uniden and seems to have the same receiver
as their new BC235XLT just without any of the TrunkTracking.
I posted a review of it a few months back on my web site.
If interested, try my home page listed below. Follow the
link to radio monitoring then find my table of receivers
and you should see the PRO-67 nearby.
Since you are just getting into the hobby, I would
also recommend checking out my New Scanner User FAQ
listed below.
Happy reading and good luck with your decision!

3919. GPS and Win CE HPCs

Newsgroup: rec.radio.scanner
Date: 1998-02-03 00:00:00 UTC
From: fourphun-hates-spam@bellsouth.net
Message-ID: <MPG.f40f2f136f06ee09896db@news.atl.bellsouth.net>
Source record: 171540
Cross-posted to: alt.radio.scanner,microsoft.public.windowsce,rec.radio.scanner,sci.geo.satellite-nav

This inquiry is in regard to the Global Positioning System, GPS
http://www.trimble.com/gps/fsections/aa_f1.htm

I am trying to locate software to connect GPS (probably a handheld Garmin GPS II(+), or GPS12(XL) model http://www.navtechgps.com/supply/gps2plus.htm), or a new Magellan Tracker or Color Trac) to a handheld palmtop Win CE 1 C-140 with 4MB memory. Remember Win CE is a new OS completely different from Intel based Windows at the machine code level.

I want a moving map display with zoom details. The ability to add scanning and radio related notes to my maps using the desktop PC etc. also would be nice. These I would like to download to the HPC for mobile use with this software I am seeking.

Has anyone tried that over priced $179 (IMHO) Teletype Software http://www.teletype.com/gps/)? A number of people would like to know what you think of it.

I am also interested in also giving my wife the ability to look at a computer map display while I am working and see where I am located as I go about my travels during the day. In the Atlanta GA metro area she could conceivably click on a remote TV camera using the Internet http://www.georgia-traveler.com/traffic/video/index.html (all those dots on that map are live cameras and speed sensors) and see my truck anywhere on our Interstate System if she knows where I am. This I would set up using packet radio to send her position information and an idea I got from http://users1.ee.net/ptech/betatest.htm . Has anyone tried 'ERIC' http://users1.ee.net/ptech/) with a GPS unit?

Does anyone have more information or an exact pointer to this ham radio software that is mentioned below..
>We can wait until APRS CE comes out sometime in the next couple of months. That will do moving map and GPS interface. see www.tapr.org
I have looked around that site and can not find anything about APRS CE.

Also if you are extremely interested in exactly the same thing - a GPS unit to a handheld Win CE PC please email me with your name and indicate your interest so I can forward what I find out without wasting USENET bandwidth on this item of narrow interest.

BTW what do you think of a handheld Garmin ii+ or Garmin G12xl verses a new Magellan Tracker or Magellan Color Trac?

Please indicate in your message if you can read the newer html formatted email from Outlook Express 4.0

Thanks in advance,
73 de

Source record: 171543

Hi Rich,

Let me clarify. When the RTO is receiving the field units, of course, they are hearing the UPLINK audio from the voted receivers. But when they transmit they are hearing themselves on the DOWNLINK from "Sidetone Receivers that are scattered around the city. This gives the RTO a positive confirmation that they are acutally on the air. Depending on where you are in the city in relation to the base transmitter, the RTO could hear you while you are using simplex. The sidetone receivers are in central locations for each brueau, for instance the receivers for Central are on a high rise in downtown. If you ran simplex around there, the RTO might well hear you taking out the base. If you were simplex in Northeast, there is no way they would hear you at all.

When the RTO's have problems with the receiver sidetone, we put them in "Local Sidetone" and the audio is created locally to the RTO. The RTO's ALWAYS perfer local s/t, but they almost always get receiver s/t.

The switching system here at the dispatch center controls all of the functions of cueing, priority, and such. Remotes such as at METRO and ASTRO come through this switch and their priority, which is lower than the RTO is set there.

The radio system is not really a "repeater" in the strict sence of the term. All audio from the voted receivers is sent to the switch at "CDC". Priority is then set, and the audio is sent back to the transmitters. Although they don't often do it, the repeat can be inhibited from CDC. The receivers and transmitters are not co-located and are at different sites. Many more receive sites than transmit.

As for Tac-4 being re-assigned and an associated re-alignment. I don't know what they are doing. I am involved in maintenance not operations. I will tell you that all of the TAC freqs are city wide. Meaning that there are transmitters throughout the city. Although they normally use a given TAC in a given area, and that is how we leave the transmitters configured, we can reconfigure the transmitters at will. They are also making use of the new TAC channels which ARE stand alone repeaters, however the RTO's do have wireline access to some of them.

Hope this helps!

Bob

The problem you will face when using a scanner to receive wireless
microphones, is that the audio you receive will be LOW fidelity unless
the scanner you use is capable of wide band signal reception, then
your recovered audio will probably be of a lower volume and noisy.

I would check to make sure that you are using an appropriate antenna and coax line. I have TWO pro-2026 and I am not sure that I would say that they have low sensitivity. At least not with a GOOD antenna and the correct (read rg-6 or better) coax line.

The last time I sent something in for repair at Rat Shack it was FAR
less expensive than purchasing the extended warranty anyway. So unless
you've got a serious problem, or repetitive problems it'd be cheaper to
pay for repairs as you go. And if you're experiencing that many repairs
your best bet is to avoid that product totally.

Mr. Close,I wasn't aware that I WAS 'in the gutter level' as you so kindly put it. Before you run rampant with your mouth in high gear why don't you examine who the problem is in this NG. I would be extremely suprised (you would be a moron of the 1st degree) if you came to the conclusion that it was me. <shaking head and laughing at all this nonsense>

And to you Mr. Mackey-there is NOTHING pompous about pointing out to blithering idiots that their english (written at the least) is abysmal. If you had .00001 of the education that you claim to have, you would find it as distressing as I do. In engineering clear communication is an ABSOLUTE. People who cannot place correct punctuation or be bothered with spelling generally do not have enough intelligence to be in the field, or at the least they are lacking the maturity to do their job correctly.

Before you get your fingers all revved up to tell me-yes I am aware that I am replying to Mr. Mackey in the wrong thread. If you don't like it then don't read it. I will no longer be replying to Mr. Mackey or any thread that has his name in it. This most likely means that I will have to leave this NewsGroup as the swine seems to be the only topic of conversation around here.

To all of you I wish a good day,

Clifford

Hi everybody!

Can anyone please tell me what this serial number "010393" can
tell me about the specifics of a Realistic RS Pro-2042 scanner?

The scanner in question (reffering to owner) is bought in the
UK in september of 1998. I want to know if it is the very latest
firmware/model of the unblocked versions of these great scanners.

Anyone ? Please don't hesitate to answer me.......! Because I am
going very firm on a purchase any day now :) !

The best,

Knut O.

Very nice summary, thanks! 8*)

I got the impression that the storm on Mon night created some real problems with the new system. The signal strength of some of the stand-alone repeaters (eg ADVICE) were way down in the valley (probably just propagation), and it sounded like someone was keying in simulcast mode over a large subset of the new repeaters to do maintenance - were there indeed systemic problems last night?

... Oh, back on the original topic - I found the following information on MODAT tones, but can't yet vouch for its veracity:
0 - 637.5 5 - 1387.5
1 - 787.5 6 - 1537.5
2 - 937.5 7 - 1687.5
3 - 1087.5 8 - 1837.5
4 - 1237.5 9 - 1987.5
Seems to me that one could simply tweak some existing code for a PC soundcard (such as multimon for linux) to verify and read the tones.

Yes, the FCC server is very slow. There is an awful lot of data
to search, and one can imagine radius searches would be time
consuming, but it's really so slow I think they're using
shitty algorithms.

Whatcha expect from the fed?

;)

>decoder are you using? 73s Mike ka3jjz@erols.com

Ooops.... I didn't pay any notice to the WFM tag!

I was referring to using the RS Pro-2006 for ACARS reception. Of course, ACARS is transmitted in the AM mode. The data ransmission is PSK 2400 Baud (1200/2400 Hz). I haven't personally tried it so I couldn't say.

I use the AEA ACARS package (similar but not identical to the Lowe's Airmaster), which is software and a serial port demodulator (similar or identical to the AEA HF Fax demodulator).

>Tim

I haven't used the program in awhile. Isn't there an item in the
set-up or configuration area that allows you to save to file instead
of directing everything to the printer?

If not, then you would have to "redirect" the printer output to a file
in DOS. I don't think the program was that brain-dead and I don't
recall having a problem at the time. Do you have the manual to refer
to? I am sure it was covered in there somewhere!

I will try to remember to look at my setup and see how it is
configured. I monitor to a file and read the file later, so I know it
can be done quite easily. That is the way I set it up from day one
and haven't thought about it since!

Battery mod has been done to allow charging of ni-cad batteries from the
alkaline battery pack. 400 channels. 235.00 shipped

Pro 2022 scanner
200 channels.
Comes with manual and antenna.
This radio has not been powered by the internal transformer.
All though it has an AC cord I used an external power supply.
This was done to save internal components from heat damage.
This radio also has a on-off switch mod for the backlite display so it saves
the backlite panel in daytime use.
Radio is in very good shape. Cellular mod has been done also.
185.00 shipped

Re: my last message :

Quote:

"Can anyone please tell me what this serial number "010393" can
tell me about the specifics of a Realistic RS Pro-2042 scanner?

The scanner in question (reffering to owner) is bought in the
UK in september of 1998. I want to know if it is the very latest
firmware/model of the unblocked versions of these great scanners."

The date of purchase would of-course read "september of 1997"

Thank you,

Knut O.
